

COURSE CURRICULUM

**PGDM PROGRAM
(BATCH 2025-27)**

PGDM 2025 - 27 Course Structure					
Total Credits - 129			SDL - 12		
Total Hours - 1170			Academic Credit - 117		

TERM I

Sr. No.	Subject Name	Subject Code	Area	Credits	Hours
1	Human Behaviour in Organization	DPM101	OB & HR	3	30
2	Advance Excel for Managers	DPM102	AI & Business Analytics	3	30
3	Managerial Communication	DPM103	Business Communication	3	30
4	Statistical Analysis for Managers	DPM104	Operations & Supply Chain Management	1.5	15
5	Marketing Management	DPM105	Marketing	3	30
6	Economics for Managers	DPM106	Finance	3	30
7	Accounting for Managers	DPM107	Finance	3	30
8	Learning and Development I	DPM108	Learning and Development	1.5	15
				21	210

TERM II

Sr. No.	Subject Name	Subject Code	Area	Credits	Hours
1	Human Resource Management	DPM201	OB & HR	3	30
2	Corporate Finance	DPM202	Finance	3	30
3	Digital and Social Media Marketing	DPM203	Marketing	3	30
4	Quantitative Techniques	DPM204	Operations & Supply Chain Management	3	30
5	AI-Driven Corporate Communication	DPM205	Business Communication	1.5	15
6	Python for Managers	DPM206	AI & Business Analytics	3	30
7	Operations Management	DPM207	Operations & Supply Chain Management	1.5	15
8	Elective I (Specialization I)			3	30
9	Elective I (Specialization II)			3	30
10	Learning and Development II	DPM208	Learning and Development	1.5	15
				25.5	255

TERM III

Sr. No.	Subject Name	Subject Code	Area	Credits	Hours
1	Design Thinking	DPM301	General Management	1.5	15
2	Business Research Methods	DPM302	Operations & Supply Chain Management	3	30
3	Customer Relationship Management	DPM303	Marketing	1.5	15
4	Advanced Managerial Communication	DPM304	Business Communication	1.5	15
5	Elective II (Specialization I)			3	30
6	Elective III (Specialization I)			3	30
7	Elective II (Specialization II)			3	30
8	Elective III (Specialization II)			3	30
9	Learning and Development III	DPM305	Learning and Development	1.5	15
				21	210

TERM IV

Sr. No.	Subject Name	Subject Code	Area	Credits	Hours
1	Legal Aspects of Business	DPM401	General Management	3	30
2	Strategic Management	DPM402	General Management	1.5	15
3	Elective IV (Specialization I)			3	30
4	Elective V (Specialization I)			3	30
5	Elective IV (Specialization II)			3	30
6	Elective V (Specialization II)			3	30
7	Learning and Development IV	DPM403	Learning and Development	1.5	15
8	Summer Internship Project	DPM404		6	60
				24	240

TERM V

Sr. No.	Subject Name	Subject Code	Area	Credits	Hours
1	Entrepreneurship	DPM501	New Age Startups & Entrepreneurship	3	30
2	Project Management & Evaluation	DPM502	Finance	3	30
3	Elective VI (Specialization I)			3	30
4	Elective VII (Specialization I)			3	30
5	Elective VI (Specialization II)			3	30
6	Elective VII (Specialization II)			3	30
7	Learning and Development V	DPM 503	Learning and Development	1.5	15
				19.5	195

TERM VI

Sr. No.	Subject Name	Subject Code	Area	Credits	Hours
1	Universal Human Values and Professional Ethics	DPM 601	General Management	3	30
2	Dissertation Research Project	DPM 602		3	30
				6	60

Self-Directed Learning (SDL) 12**Area : Marketing**

Sr. No.	Course	Code	Credits	Term	Type
1	Consumer Behaviour	DPMM 01	3	II	Core Elective
2	Sales Distribution and Retail Management	DPMM 02	3	III	Core Elective
3	Marketing Analytics	DPMM 03	3	III	Core Elective
4	Integrated Marketing Communication	DPMM 04	3	IV	Elective
5	B2B Marketing	DPMM 05	3	IV	Elective
6	Product and Brand Management	DPMM 06	3	IV	Elective
7	AI in Marketing	DPMM 07	3	V	Elective
8	Strategic Marketing	DPMM 08	3	V	Elective
9	Services Marketing	DPMM 09	3	V	Elective

Area : OB & Human Resource Management

Sr. No.	Course	Code	Credits	Term	Type
1	AI in Human Resource Management	DPMH 01	3	II	Core Elective
2	Industrial Relations and HR Legislations	DPMH 02	3	III	Core Elective
3	HR Analytics & Metrics Professionals	DPMH 03	3	III	Core Elective
4	Compensation Management	DPMH 04	3	IV	Elective
5	Performance Management	DPMH 05	3	IV	Elective
6	Organization Development & Change Management	DPMH 06	3	IV	Elective
7	Competency Mapping and Assessment	DPMH 07	3	V	Elective
8	Strategic HRM	DPMH 08	3	V	Elective
9	International Human Resource Management	DPMH-09	3	V	Elective

Area : Finance

Sr. No.	Course	Code	Credits	Term	Type
1	Cost and Management Accounting	DPMF 01	3	II	Core Elective
2	Security Analysis and Portfolio Management	DPMF 02	3	III	Core Elective
3	Tax Planning and Management	DPMF 03	3	III	Core Elective
4	Project Finance and Financial Modelling	DPMF 04	3	IV	Elective
5	Financial Risk Management and Measurement	DPMF 05	3	IV	Elective
6	Investment Management and Banking	DPMF 06	3	IV	Elective
7	Financial Aspects of Mergers and Acquisitions	DPMF 07	3	V	Elective
8	International Finance	DPMF 08	3	V	Elective
9	Financial Derivatives	DPMF 09	3	V	Elective

Area : Artificial Intelligence & Business Analytics

Sr. No.	Course	Code	Credits	Term	Type
1	SQL for Data Analytics	DPMB 01	3	II	Core Elective
2	Analytics for Managers using Python	DPMB 02	3	III	Core Elective
3	Data Analytics using Power BI	DPMB 03	3	III	Core Elective
4	Business Intelligence and Data Mining	DPMB 04	3	IV	Elective
5	AI for Decision Making	DPMB 05	3	IV	Elective
6	Data Visualization using R	DPMB 06	3	IV	Elective
7	Data Analytics using Tableau	DPMB 07	3	V	Elective
8	Predictive Analytics and Modelling with Python / R	DPMB 08	3	V	Elective
9	Emerging Technologies for Managers	DPMB 09	3	V	Elective

Area : International Business

Sr. No.	Course	Code	Credits	Term	Type
1	International Strategic Management	DPMIB 01	3	II	Core Elective
2	International Logistics and Shipping Operations	DPMIB 02	3	III	Core Elective
3	International Trade Operations & Documentation	DPMIB 03	3	III	Core Elective
4	Basics of Supply Chain Management	DPMIB 04	3	IV	Elective
5	Maritime Logistics and Documentation	DPMIB 05	3	IV	Elective
6	World Trade Organization & Regional Trading Blocks	DPMIB 06	3	IV	Elective
7	Thrust Product & Thrust Market	DPMIB 07	3	V	Elective
8	International Marketing	DPMIB 08	3	V	Elective
9	India's Foreign Trade	DPMIB 09	3	V	Elective

Area : Entrepreneurship and New Age Start Ups

Sr. No.	Course	Code	Credits	Term	Type
1	Foundation of Entrepreneurship and Start- Up	DPME 01	3	II	Core Elective
2	AI for Entrepreneurship	DPME 02	3	III	Core Elective
3	Opportunity and Feasibility Analysis	DPME 03	3	III	Core Elective
4	Legal Structures in Entrepreneurship and Start Up	DPME 04	3	IV	Elective
5	Applied Economics for Start Ups	DPME 05	3	IV	Elective
6	Business Models in New Age	DPME 06	3	IV	Elective
7	Entrepreneurial Marketing	DPME 07	3	V	Elective
8	Entrepreneurial Finance	DPME 08	3	V	Elective
9	International Entrepreneurship	DPME 09	3	V	Elective

Area : Operations and Supply Chain Management

Sr. No.	Course	Code	Credits	Term	Type
1	Strategic Supply Chain Management	DPMS 01	3	II	Core Elective
2	Supply Chain Network Design	DPMS 02	3	III	Core Elective
3	Inventory & Warehousing Management	DPMS 03	3	III	Core Elective
4	Sourcing and Vendor Management	DPMS 04	3	IV	Elective
5	Aggregate Planning and Supply Chain	DPMS 05	3	IV	Elective
6	Supply Chain Analytics using AI	DPMS 06	3	IV	Elective
7	Maritime Logistics and Documentation	DPMS 07	3	V	Elective
8	Transportation and Revenue Management in Supply Chain	DPMS 08	3	V	Elective
9	Operations and Supply Chain Management Consulting	DPMS 09	3	V	Elective

Sr. No.	Items	Credits
1	MOOCs Courses / Coursera	2
2	Research Paper Publication	2
3	Conference Paper Presentation	2
4	Live Project (15 days minimum)	2
5	External Academic Participations - 1st position	2
6	SSO (Self Society Organization)	2
7	Workshops, Seminars or Corporate Readiness Program or any other academic event notified by the institute competent authority	0.5 each

***A Total of 12 credits are mandatory to be earned using minimum two items from the table for the award of diploma.**

***One certification will be opted by the students in IV Term from both the options Foreign Language and Stress Management & Mindfulness.**

Sr. No.	Item	Hours (min)	Term
1	Quantitative aptitude and logical reasoning	20	All

HUMAN BEHAVIOUR IN ORGANISATION

Course Code	DPM101
Course Credits	3
Term	I
Session duration	60 mins each session

Introduction

Human Behavior in Organization is an important core course that works as a tool for decision making in all functional domains of management. The importance of Human Behavior in Organization is very high for aspirants who wish to pursue their career in HR to know how employees behave and perform in the workplace. Also, it helps to develop an understanding of the aspects that can motivate employees to increase their performance on workplace and help organizations establish a strong and trusting relationship with their employees. The course is structured to meet the apply level of bloom's taxonomy at certain points but largely it is designed to meet the level of understanding level of the taxonomy.

Teaching Pedagogy

The teaching methodology will include emphasizing experiential learning through field projects, simulations, and flipped classroom techniques. Students actively engage with real-world challenges by working on field projects that allow them to apply theoretical concepts in practical scenarios. Simulations and case studies further immerse students in decision-making processes, enhancing their problem-solving skills. The flipped classroom model encourages independent learning, where students review content before class, enabling more interactive and application- focused sessions. Additionally, offering certifications on industry-relevant tools and technologies ensures students gain specialized skills, preparing them for dynamic business environments.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand fundamentals of all functional areas of management.
PO2	Apply management knowledge to take better decisions for various given business scenarios.
PO3	Critically understand the business problems and find the right management tool to solve them.
PO4	Demonstrate values, ethics, leadership and teamwork.

Course Outcomes

After taking this course a student shall be able to;

CO1	Explain fundamental concepts of individual and group behavior.
CO2	Understand & apply behavioral theories and interpersonal relationship models
CO3	Apply leadership approaches, power dynamics, and decision-making strategies
CO4	Apply diversity, equity, inclusion, and stress management techniques to enhance organizational culture.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom (if required).

CO 4	3	2	2	1

Curriculum

Unit-1 Individual Behavior

Human Behavior in organizations: Nature & Scope, Models of Human Behavior, Importance of studying human behavior in organizations. Organizational Design & Structure. Personality: Personality & Self-Awareness, Personality Measurement.

Unit-2 Behavioral Theories & Motivation

Interpersonal Relationships: Johari Window, Transactional Analysis, MBTI Model, Motivation & Personal Effectiveness: Motivation Structure & Processes, Application.

Unit-3 Individual Perception and Commitment

Perception & Attribution: Perception, Types, Perceptual Errors. Attitude: Meaning & types of attitudes, Measurement, Job Satisfaction Organizational Commitment.

Unit-4 Group Behavior I

Power, Empowerment & Influence: Leadership Approaches, Neuroscience in Leadership, Psychological Safety and behavioral Economics in decision making.

Groups & Group Processes: Concepts & Types of Groups, Group Dynamics, Conflict and Negotiations.

Unit-5 Group Behavior II

Equity, Diversity & Inclusion, Organizational Culture, Stress Management

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable in GIMS and will invite penalty. Type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalties as per policies of the Institute.

Advance Excel for Managers

Course Code	DPM102
Course Credits	3
Course for	PGDM
Term	I
Session duration	60 mins each session

Introduction

Excel is a great resource for teaching students many important skills, like data visualization, data organization and information restructuring, filtration, quick calculations, data interpretation and tabulation, etc. All of these skills are important for the future. Microsoft Excel (MS Excel) helps worldwide users to work on a spreadsheet on their computers. It's a versatile application that makes data gathering, tabulation, and recording jobs easier.

Excel is commonly used for data organization, accounting, and progress report processes. It's used in all business functions in whatever size and category. It's also a necessary tool across all sectors and industries. Even the education sector finds it very useful in its records management and educational templates.

Programme Outcomes

After completing PGDM a student should be able to:

PO1	Understand fundamentals of all functional areas of management.
PO2	Apply the management knowledge to take better decisions for various given business scenarios.
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to:

CO1	Improved time management: increase productivity and improve time management by having a command on various features of Excel.
CO2	Utilizing excel concepts and knowledge and be able to tackle even more complex calculations and operations with inbuilt tools, without wasting too much time, and without compromising even a bit on accuracy.
CO3	Having enough analytical skills to make sense of the finances and other important metrics. Equipping with necessary knowledge and skills to perform well in their professional careers as well. Supporting building strong analytical skills by managing, analyzing, and performing business and daily life financial calculations.
CO4	Displaying Data in an easily consumable pictorial format with the various visualization methods of Excel. Focusing on faster and more accurate decision making, quick calculations, seamless data visualization, and a lot more

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be provided with the important video links available on free source of some topics for further doubt clarifications.

Textbooks:

- New Perspectives MS Office 365 & Excel 2019, Patrick Carey.
- MS Excel-2019: Data Analysis and Business Modeling by Wayne L. Winston.

Reference Books:

- Excel 2019 ALL-IN-ONE for Dummies.
- Excel: QuickStart Guide from Beginner to Expert.

CO and PO Mapping

3 - Highly Mapped

2 - Medium Mapped

1 - Low Mapped

	PO1	PO2	PO3	PO4	PO5
CO1	3	2	-	-	-
CO2	3	3	2	-	2
CO3	3	3	3	3	3
CO4	-	3	3	3	3

Curriculum

Unit-1 Working with Large Worksheets:

Viewing and Organizing Spreadsheet Data, The Zoom Feature, Using Freeze Panes, Hide/Unhide rows and columns, Automatic Data Outlining – Group, Ungroup, Subtotal, Manual Data Outlining, Cell Formatting, Data Validations, Background View of Excel

Working with Dates:

Dates and time in Excel, Inserting and formatting dates, Entering date functions, Using dates in formulas, DATE Functions: Date, Add/Subtract days-months-years, Date Diff, Network Days, Network days International

Conditional Formulas and Formatting:

Applying Conditional Formatting, creating a Conditional Formatting Rule, Removing Conditional Formatting, Using the Manage Rules Option

Unit-2 Working with Tables:

What is a Table? Creating Tables in Excel, Concept of Dynamic Tab (Table Design Tab) - Remove Duplicates, Convert to Range, Slicers, Adding Total Row (Creating Subtotals), Resize table, table style, total rows, filter button, banded rows/columns. Changing the Table Range, Inserting/Deleting Rows or Columns, Sorting and Filtering Tables:

Sorting Data in a Table, Single/Multiple Order Sorting, Advance Sorting. What is an AutoFilter? Custom AutoFilters, Removing Filters, Filtering with Wildcard Characters, Using an Advanced Filter

Unit-3 Functions Part-I

Auto Functions, If-Nested IF, Sum, Sumif, Sumifs, Count, Countif, Countifs, iferror, sumproduct, frequency, large, small.

Lookup & References:- Vlookup, Hlookup, Xlookup for Dynamic Lookups.

Offset for Dynamic Calculations, Index, Match, XMATCH

Unit-4 Functions Part-II

Text Functions- Trim, Proper, Upper, Lower, Len, Concatenate, Left, Right, Mid, Find, Replace, Substitute, Code-Char Conversions, Text to Column. Most Frequently used Financial-Mathematical-Logical-Statistical Functions.

Unit-5 Analyst & Auditor Skills

Import and Export Data, Pivot Tables, Charts in Excel, Dashboard in Excel, What-If-Analysis (Goal Seek, Scenarios, Data Tables), Analysis Tool Pack, Optimization Techniques using Solver Add-In, Working on macros, Protection of Cells-Sheets-Workbook

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. - b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalties as per policies of the Institute.

Managerial Communication

Course Code	DPM103
Course Credits	3
Term	I
Session duration	60 mins each session

Introduction

Managerial Communication is an important core course that works as a tool for acquainting the students with the concepts of managerial communication, the principles of effective communication, written, oral and non-verbal communication. The importance of business communication is quite high for the aspirants across all management domains for their career growth as a tool to better information transmission and enhanced productivity. The course is structured to meet the apply level of Bloom's Taxonomy.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class discussions, cases, video lectures, role plays and group assignment. Students will have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant case studies and videos from the suggested channels and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM a student should be able to:

PO1	Understand fundamentals of all functional areas of management.
PO2	Apply management knowledge to take better decisions for various given business scenarios.
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to:

CO1	Identify and define the value of communication in Business scenario.
CO2	Identify and relate with the communication processes and the key to effectiveness in both written and oral managerial communication.
CO3	Demonstrate written communication skills in a business scenario while omitting the various communication barriers occurring during the communication process.
CO4	Demonstrate the verbal and non-verbal communication error free, keeping various underlying concepts of managerial communication into consideration.

Curriculum

Unit-1 Introduction to Business Communication

Nature, Scope, Definition and Role of Business Communication. Classification and structure of Communication in an organization, Communication Models, 7Cs of Effective Communication Barriers to Communication

Unit-2 Message Delivery and Audience Insight

Verbal and Non-verbal communication overview of Oral communication, Conversation control, Reflection and Empathy: Two sides of effective oral communication

Unit-3 Effective Business Writing

Principles of Effective Written Communication 3x3 Writing process for business communication

Unit-4 Group Communication and Presentation designing and delivering:

Meetings – Planning meetings, objectives and conducting business meetings

Defining a purpose, Analyzing the audience, organizing contents and preparing outline, Understanding nuances of Delivery

Delivery: Presentation Skills, Story Factor on 7 Habits of Highly Effective People by Stephen Covey.

Unit-5 Business Writing:

Email/letter writing: Business letters/emails in all contexts of business Employment Communication:

Cover Letter; Offer of employment and Letter of Acceptance, Writing Notice, Agenda, Memorandums, Resolution and Minutes of meetings (MOM)

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable in GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalties as per policies of the Institute.

Statistical Analysis for Managers

Course Code	DPM104
Course Credits	1.5
Course for	PGDM
Term	I
Session duration	60 mins each session

Introduction

Statistics for Managers is an important core course that works as a tool for decision making in all functional domains of management. The importance of statistics is very high for aspirants who wish to pursue their career in business analytics or apply analytics as a decision-making tool. The course is structured to meet the apply level of bloom's taxonomy at certain points but largely it is designed to meet the level of understanding level of the taxonomy.

Teaching Pedagogy

This course adopts a practical and student-centered approach to teaching statistics, emphasizing conceptual clarity and real-world application. Students engage actively with data through hands-on exercises using MS Excel and real datasets, bridging theory with business decision-making. A blend of lectures, multimedia resources, quizzes, and assignments ensures continuous learning and assessment. Collaborative discussions and interpretation exercises foster critical thinking and analytical skills. Academic integrity is strongly emphasized to develop responsible and original work habits. Overall, the pedagogy aims to equip students with the statistical tools and confidence needed for effective management decisions.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership and teamwork skills
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understand the fundamentals of statistics and their interdisciplinary role in decision making
CO2	Present and understand the data
CO3	Perform fundamental univariate and bivariate data analysis to draw meaningful insights

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will

also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

Plagiarism is unacceptable in GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalties as per policies of the Institute.

Marketing Management

Course Code	DPM105
Course Credits	3
Term	I
Session duration	60 mins each session

Introduction

This course provides an in-depth overview of the core concepts, principles, and theories of business decision making. This enables the future leaders to understand and apply marketing principles for effective decision making and understanding. The syllabus for this course is divided into Five units, each focusing on different aspects of marketing. The course aims to achieve level 3 of the bloom's taxonomy (apply) at certain points in the syllabus, but the majority portion of the syllabus is enabling to achieve the blooms level 1& 2 (remember & understand).

Teaching Pedagogy

The pedagogy for this course will be a blend of interactive and experiential learning methods. Classroom sessions will primarily include lectures supported by PowerPoint presentations, case studies, and contemporary articles to provide both theoretical and practical insights. Active classroom interaction will be strongly encouraged, with students expected to enrich discussions by sharing their perspectives and knowledge. In addition, students will participate in group discussions, collaborative activities, and presentations to enhance peer-to-peer learning. Individual assignments and presentations will further strengthen analytical and communication skills, ensuring the application of marketing concepts to real-world scenarios.

Programme Outcomes After completing PGDM a student should be able to;

PO1	Understand Fundamentals of all functional areas of management.
PO2	Apply management knowledge to take better decisions for various given business scenarios.
PO3	Critically analyze business problems and find right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork. PO5 Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understand the basic concepts of marketing, marketing mix, environment and STP.
CO2	Discuss and demonstrate the marketing Mix and its associated strategies.
CO3	Translate the marketing mix (4Ps) strategies and explain its relationship with overall marketing and business strategy.

Curriculum

Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Learning and Development I

Course Code	DPM108
Course Credits	1.5
Course for	PGDM
Term	I
Session duration	60 mins each session

Introduction

The aim of this course, designed by the Learning and Development (L&D) department, is to equip PGDM students with the essential skills required for placement readiness, internship preparedness, and overall corporate readiness. This trimester-based course aims to prepare PGDM students for internships, placements, and corporate roles. It focuses on communication, building confidence, leadership, and interpersonal skills to ensure career readiness and overall professional growth.

Course Objective

To assess the current level of students.

To give a real time GD, Interview practice to the students.

To prepare students comprehensively for placements and future career opportunities.

Course Outcomes

After the completion of the course, the student will be able to:

CO1	Understand the core competencies required for placement, internship, and corporate success, including communication, leadership, and interpersonal skills.
CO2	Apply learned strategies to real-time group discussions, interviews, and workplace scenarios to demonstrate professional readiness.
CO3	Develop skills for career enhancement

Course Content (Theory + Practical)

Soft Skill & English Language Module				
Session No.	Topic	Weightage	Activity Planned	Assessment Metrics
1	Identifying and utilizing the strengths	1 hrs.	SWOC – Submission	Assessment Strengths, Weakness, Opportunities, Threats
	SWOC analysis & Self-regulation			
2	Importance of LSRW LSRW (Listening, Speaking, Reading, Writing) for effective communication and comprehensive language development.	1hrs	Listening Activity – audiotracks, podcast Activity-Chinese Whisper Reading: Loud Reading & Active listening exercise. Activity-Favorite novel/book	Assessment Listening Audio and perform quiz /Google form /10 questions Rubrics: English fluency,

			reading	pronunciation, clarity of speech, Intonation, confidence
3	Revisiting Grammar Tenses, Punctuation, Sentence Formations	2 hrs.	Tense-Based Storytelling Story building activity with the Prompt given to the students.	Assessment English fluency & Content Delivery with the usage of correct tenses
	Apply different tenses correctly in spoken and written communication with correct sentence formation			
4	Goal Setting	1 hrs.	Set SMART goals / GROW Model Submission	Assessment Content, Chronological Order & Clarity and Readability
	What is a goal, what is Goal Setting and How to Set SMART goals? Short term goals and Long term goals			
5	Training Reimagined: AI in L&D , Tools that Transform Learning	1 hrs.	Classroom delivery with hands-on practice	Assessment Live prompt challenge
	Mastering Prompts, Co Pilot, Redact AI, Interviewer			
6	Digital Fluency / Netiquette and Personal Branding	2 hrs.	Flipped Classroom The Social Media Makeover Challenge: Participants are divided into groups and assigned a social media profile from the group. Groups then redesign the profile by suggesting improvements in bio, profile	Linkedin Check Content, Presentation skills, Content Writing Form, Creativity, Branding
	Social media handling, LinkedIn creation and maintenance, Digital Footprint, WhatsApp etiquette			
	Practice		picture, content strategy, and engagement style and present as a group.	
7	Workplace Decorum & Image Management	1 hrs.	Role Play Networking Scenarios –Engage in mock networking events to improve small talk and professionalism. (random group)	Hygiene, Dress Appropriateness, Attention to Detail, Personal Expression
	Grooming tips, Dressing Etiquette, Corporate Etiquette, Handshake			
	Resume Building - I (Pre Internship)		Project-Based Learning (PBL) / Peer Review -	

8	Difference between resume and CV, Industry standard resume preparation. JD understanding and knowing the component.	2 hrs.	Submission Crafting a resume is a hand- on project where learners research, design, and refine their own professional document. Grammar Check and Chronology Check, Checked and final approval by Mentor	Resume Submission 2 Sample resume for 2 different Job Descriptions / specialization.
9	Gain Confidence when speaking / Glossophobia	2 hrs.	Public Speaking (Hesitation Removal Exercise) - JAM/Impromptu/Extempore Debate	Content, English fluency, Body Language & Confidence
	What is Confidence? - How to enhance confidence? - Steps to augment confidence when speaking.			
10	Elevators Pitch / Self Introduction	2 hrs.	Think-Pair-Share (TPS) – Students can first think about their pitch, pair up to practice, and share with the group for feedback. Video Analysis – Pre and Post EP Video Analysis Students record their 60 second elevator pitch and review it for clarity, body language, and confidence.	Content, English fluency, Body Language & Confidence
	First Impression, Developing Rapport			

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. Type and extent of penalty will be at the discretion of the concerned faculty.

Human Resource Management

Course Code	DPM201
Course Credits	3
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction

The curriculum will enable the students on how employees behave and perform in the workplace. It will help the students to develop an understanding of the aspects that can motivate employees, increase their performance, and help organizations establish a strong and trusting relationship with their employees. The course is structured to meet the apply level of bloom's taxonomy at certain points but largely it is designed to meet the level of understanding level of the taxonomy.

Programme the students to identify different forms of organization with their distinctive features and explain their relevance in a particular business context. They will examine what makes an organization, how organizations evolve and what makes them effective. The basic objective of this course is to gives insight to Outcomes.

Teaching Pedagogy

The teaching methodology will include emphasizing experiential learning through field projects, simulations, and flipped classroom techniques. Students actively engage with real-world challenges by working on field projects that allow them to apply theoretical concepts in practical scenarios. Simulations and case studies further immerse students in decision-making processes, enhancing their problem-solving skills. The flipped classroom model encourages independent learning, where students review content before class, enabling more interactive and application- focused sessions. Additionally, offering certifications on industry-relevant tools and technologies ensures students gain specialized skills, preparing them for dynamic business environments.

Programme Outcomes

After completing PGDM a student should be able to.

PO1	Understand fundamentals of all functional areas of management.
PO2	Apply management knowledge to take better decisions for various given business scenarios.
PO3	Critically understand business problems and find the right management tool to solve them.
PO4	Demonstrate values, ethics, leadership and teamwork.
PO5	Higher employability quotient.

Course Outcomes

After taking this course a student shall be able to.

CO1	To understand the integrated perspective on role of HRM in modern business.
CO2	To develop an ability to plan human resources and understand concepts of job analysis.
CO3	Develop competency to recruit, train and appraise the performance of employees.
CO4	Utilize contemporary HRM practices

Readings

Cheating is strictly prohibited at GIMS and will invite penalties as per the policies of the Institute.

Digital and Social Media Marketing

Course Code	DPM203
Course Credits	3
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction

This course provides an in-depth overview of the core concepts, principles, and practices of Digital and social media marketing along with developing understanding about digital and social media marketing strategies. This enables the future leaders to understand and apply the concepts of digital and social media marketing for effective decision making. The syllabus for this course is divided into Five units, each focusing on different aspects of Digital marketing. The course aims to achieve level 1,2 and 3 of bloom's taxonomy (remember, understand & apply).

Teaching Pedagogy

Classroom sessions will include lectures supported by PowerPoint presentations, case studies, industry reports, and the latest digital marketing trends to provide both conceptual understanding and practical insights. Students will be encouraged to actively participate in discussions, contributing their perspectives and experiences with digital platforms. Learning will further be enriched through group discussions, live projects, simulations, and collaborative activities that foster creativity and strategic thinking. Students will also engage in assignments and individual presentations designed to build analytical, problem-solving, and communication skills, while applying digital and social media marketing concepts to real-world business scenarios.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand Fundamentals of all functional areas of management.
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically analyze business problems and find right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork. PO5 Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Define the role and concepts of Digital Marketing in the context of the overall marketing plan of a product or service.
CO2	Understand the strategies of Digital and social media marketing in context with the current scenario.
CO3	Demonstrate knowledge of the tools and techniques in Digital and Social Media Marketing by applying them in a practical environment.

Curriculum

UNIT- I Introduction to Digital Marketing

Evolution, role and relevance in overall marketing, key advantages and challenges, similarities and differences with conventional marketing, statistics of DM, latest trends in DM, career opportunities in DM. Components of Digital Marketing, The Current Digital Marketing Landscape, how digital marketing has changed post pandemic, Scope of Digital Marketing in India and beyond, Digital Marketing Strategy Formulation.

UNIT - II Digital Marketing Media

MEDIA - Types of Digital Media: POEM (Paid, Owned, Earned, Mixed), Digital Consumer Behavior – Brand Loyalty Vs FOMO, First Moment of Truth, Zero Moment of Truth, The Accelerated Brand Journey empowered by Artificial Intelligence, Digital Marketing Strategy and Planning Digital Marketing as part of Integrated Marketing Planning Framework, Digital Marketing Planning Process. The PHYGITAL Approach.

UNIT- III Digital Marketing Strategy and Marketing Mix

Content marketing, Digital Marketing Mix, Social Media Marketing (SMM) & Engagement Strategy: Role and relevance, social media options, social media content planning – engagement vs. advertising, social media and the “Buzz effect”. Digital Marketing future scope and extensions: Metaverse and Artificial Intelligence in Marketing.

UNIT- IV Digital Marketing Tools & Techniques

Website Creation, Buying domain names, Search Engine Optimization (SEO)& Search Strategy Introduction to Search Engines. Understanding Google Search and Search Engine Rankings (SERP), Key Contours of SEO, SEO guidelines and best practices, Keyword building techniques, Search Engine Algorithms and Webmaster Tools, Search Engine Marketing, Introduction to paid marketing, Google AdWords, AD CREATION + LEAD GENERATION, Google Display Advertising, Re-marketing, Mobile App Marketing, Video Marketing

UNIT-V Digital Marketing Analytics

Social media performance metrics, GOOGLE ANALYTICS: Introduction, practical applications, Universal Analytics, GA 4.0, Dimensions Vs Metrics, Demo Account, Report Generation and Interpretation, incorporating Google Analytics in framing Digital Marketing Strategy, application to start-ups, linkage with Artificial Intelligence, special reports, reducing bias

Textbooks:

- Digital Marketing, Seema Gupta, Tata Mc Graw Hill

CO and PO Mapping

3 - High Mapping

2 - Medium Mapping

1- Low Mapping

	PO1	PO2	PO3	PO4	PO5
CO1	3	1	2	-	-
CO2	3	1	2	1	-
CO3	3	3	3	2	3

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas or works that are not one's own and which are not common knowledge, without giving credit to the originator. Plagiarism is unacceptable in GIMS and will invite a penalty. The type and extent of the penalty will be at the discretion of the concerned faculty.

- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/a list of sources that either do not exist or have not been used, having another individual write your paper or assignment, or purchasing a paper for one's submission. Cheating is strictly prohibited at GIMS and will invite penalties as per the policies of the Institute.

Quantitative Techniques

Course Code	DPM204
Course Credits	3
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction

Business decisions and forecasting in all domains of management are driven by data and data analysis tools. Quantitative techniques are a course that enables the aspirant to use contemporary data-based decision-making techniques. This course becomes highly important for the students who are willing to pursue their career in the field(s) of business analytics, data analytics etc. The course is structured to meet the apply level of bloom's taxonomy.

Teaching Pedagogy

The teaching approach for Quantitative Techniques focuses on developing students' ability to apply mathematical and statistical models for effective business decision-making and forecasting. The course combines conceptual understanding with hands-on application through MS Excel and real-world problem-solving exercises. Interactive lectures, supplemented by case studies and practical assignments, encourage students to identify appropriate quantitative methods and use them confidently in managerial contexts. Continuous assessments, including quizzes and projects, foster analytical thinking and reinforce learning. Emphasis on academic integrity and original work cultivates ethical research and reporting habits. Overall, the pedagogy aims to prepare students to leverage quantitative tools for data-driven and strategic decision-making in management.

Programme Outcomes

After completing PGDM a student should be able to:

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

CO1	Understand the fundamentals of quantitative techniques and its interdisciplinary role in decision making
CO2	Identify the right models for solving the problem
CO3	Apply the models for decision making and forecasting.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will

also be given video lecture links of the teaching faculty to clear the doubts after the classroom.

Textbook

- R I Levin, and David S Rubin (2017), “Statistics for management”, (Pearson Education India. Eight edition).
- Hamdy A. Taha, Operations Research: An Introduction, Phi Learning Pvt. Ltd

Reference Books:

- Aczel Amir D and Sounder Pandian J Complete Business Statistics, Tata McGraw Hill (7th edition, 2012).
- David R Anderson, Dennis J Sweney and Thomas A Williams (2007), “Statistics for Business and Economics”, Thompson Southwestern (Ninth edition).
- Gerald Keller, “Statistics for Management”, 4th Indian edition (Thomson South-Western, a division of Thomson Learning Inc., 2009).
- Naval Bajpai, “Business Statistics”, (Pearson Education South Asia, 2013 edition)
- Ken Black, “Business Statistics”, (Wiley India 5th edition).
- D. Chawla & N. Sodhi “Research Methodology, Concepts and Cases”.

CO and PO Mapping

3 - Highly Mapping

2 - Medium Mapping

1 - Low Mapping

Curriculum

Unit-1 Sampling and sampling distribution

Introduction to the sampling, random sampling, non-random sampling, design of experiments, introduction to sampling distributions

Unit-2 Probability

Introduction to probability, basic terminologies, types of probabilities, probability rules, Baye’s theorem

Unit-3 Probability distributions

Binomial, Poisson and Normal Distribution

Unit-4 Theory of estimation and testing of hypothesis

Introduction, point and interval estimation, null and alternate hypothesis, type I and type II error, level of significance, one sample z and t – test, two sample z and t -test, analysis of variance: one way and two-way, chi-square test

Unit-5 Forecasting models (Using MS Excel)

Multiple Regression, Time series

Decision Theory & Liner programming problem (Using MS Excel)

Non probabilistic and probabilistic decision making, LLP formulation and solution, transportation problem, assignment problem

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas or works that are not one’s own and which are not common knowledge, without giving credit to the originator. Plagiarism is unacceptable in GIMS and will invite a penalty. The type and extent of the penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/a list of sources that either do not exist or have not been used, having another individual write your paper or assignment, or purchasing a paper for one’s submission. Cheating is strictly prohibited at GIMS and will invite penalties as per the policies of the Institute.

AI-Driven Corporate Communication

Course Code	DPM205
Course Credits	1.5
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction

In the era of digital transformation, corporate communication has adopted Artificial Intelligence (AI) as a strategic tool to enhance message delivery, personalization, and efficiency. This course equips future managers with both conceptual insights and practical exposure to AI-driven communication strategies. Students will explore AI-powered tools for crafting messages, automating tasks, and analyzing audience behavior across functions like Marketing, HR, Finance, Supply Chain, and International Business. Through case studies and hands-on activities, learners will discover how AI is making business communication faster, smarter, and more data-driven

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class discussions, cases, video lectures, practical labs and group assignment. Students will have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant case studies and videos from the suggested channels and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM a student should be able to:

PO1	Understand fundamentals of all functional areas of management.
PO2	Apply management knowledge to take better decisions for various given business scenarios.
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to:

CO1	Understand and discuss the role of AI in enhancing business communication processes and functions
CO2	Identify and illustrate the use of AI tools in different corporate communication contexts.
CO3	Demonstrate the application of AI to internal and external communication scenarios.
CO4	Demonstrate the application of selected AI tools to design simple corporate communication content or campaigns.

Textbook

- Tegmark Max, Shapiro, R., (2017), Life 3.0: Being Human in the Age of Artificial Intelligence, Random House Audio
- Bovee, C.L, Thill, J.V & Raina, R.L, Business Communication Today, Pearson Education

Reference Books:

- Inspired by Data: AI's Transformative Role in Corporate Communication
- Front Cover
- Giuseppe Mayer
- Bocconi University Press,

- [Curriculum](#)

Unit-1 Foundations of Corporate Communication and AI

Nature and scope of corporate communication, traditional vs. technology-driven communication, introduction to Artificial Intelligence: Concepts and relevance, key AI terminologies (NLP, ML, Chatbots, Generative AI), influence of AI on business communication functions

Unit-2 AI Tools and Platforms for Communication:

Overview of AI-driven writing, editing, and content curation tools, grammar and tone adjustment tools (e.g., Grammarly, Quill Bot), introduction to ChatGPT, Jasper, Write sonic, etc., use of TTS, STT tools (e.g., Natural Reader, Otter.ai), image and video generation tools for visual communication

Unit-3 AI Applications in Internal and External Communication:

Communication across Functional Areas viz., Marketing, HR, Finance, Supply Chain, and International Business (IB): AI-powered tools in Marketing, HR, Finance, Supply Chain, and International Business

Unit-4 Practicing AI-Driven Communication:

Designing AI-generated business writings, creating a sample social media calendar using AI scheduling tools, demonstrating a use case: Internal communication campaign using AI tools, Reflection on benefits and limitations of AI use in corporate messaging, developing corporate presentation through AI tools

Unit-5 Ethical and Legal Aspects in AI Communication:

Data usage and privacy issues, ethical dilemmas in AI-generated content, Misinformation and fake content risks, overview of data protection regulations, responsible use of AI in corporate narratives

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas or works that are not one's own and which are not common knowledge, without giving credit to the originator. Plagiarism is unacceptable in GIMS and will invite a penalty. The type and extent of the penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/a list of sources that either do not exist or have not been used, having another individual write your paper or assignment, or purchasing a paper for one's submission. Cheating is strictly prohibited at GIMS and will invite penalties as per the policies of the Institute.

Python for Managers

Course Code	DPM206
Course Credits	3
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction

This course offers a wide range of opportunities for students to explore and apply their programming skills in diverse fields. Its versatility, ease of learning, and extensive community support make it an excellent choice for teaching students about programming and its real-world applications.

Python is a beginner-friendly language that provides a solid foundation for programming and problem-solving. It equips students with valuable skills and knowledge that can be applied in various academic and professional fields.

The course is structured to meet the apply level of Bloom's taxonomy at certain points but largely it is designed to meet the understanding level of the programming language.

Teaching Pedagogy

The course will follow a hands-on, experiential learning approach emphasizing conceptual understanding and practical application. Each session will combine short lectures, live coding demonstrations, and guided exercises to build programming confidence. Students will engage in problem-solving tasks, mini-projects, and case-based discussions linking Python applications to management domains such as data analysis and decision-making. Continuous assessments through quizzes, assignments, and lab work will ensure skill reinforcement. Peer learning, collaborative coding, and use of online learning resources will be encouraged. The pedagogy aims to develop both technical proficiency and analytical thinking aligned with managerial problem-solving.

Programme Outcomes

After completing PGDM a student should be able to:

PO1	Understand fundamentals of all functional areas of management.
PO2	Apply management knowledge to take better decisions for various given business scenarios.
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to:

CO1	Python, including installation, basic syntax, variables, data types, operators, and type conversion, enabling them to write basic Python programs.
CO2	Proficient in designing and implementing control flow structures and functions in Python to solve complex problems.
CO3	Select and apply appropriate data structures in Python, optimizing data organization and manipulation for various computational tasks.
CO4	Manage files and handling exceptions in Python, ensuring efficient data storage and robust error handling in their programs.
CO5	Effectively manage and analyze data for informed decision-making and reporting.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given video lecture links of the teaching faculty to clear the doubts after the classroom.

Textbook

- Python in easy steps/Mike Megrath.ed-2nd edition 2018 by in easy steps.

Reference Books:

- Think Python: How to think like a computer scientist – 2nd edition by Allen B. Downey O Reilly.

CO and PO Mapping

3 - Highly Mapping

2 - Medium Mapping

1 - Low Mapping

	PO1	PO2	PO3	PO4	PO5
CO1	3	2	1	1	1
CO2	3	2	2	2	3
CO3	3	1	2	1	2
CO4	3	2	3	3	2
CO5	3	1	1	1	2

Curriculum

Unit-1 Introduction to Python:

Installing Python with Code Editor (Preferably Anaconda/IDE Spyder), What is Python and Why it's Popular, Features of Python, Basic Syntax, Print Statements, Comments, Variables, Data Types, Operators, Type Conversions.

Unit-2 Data Structures:

Lists: Creating, indexing, slicing and modifying. Tuples: Creating, indexing and immutability.

Dictionaries: Creating, adding and accessing elements. Sets, Arrays, Strings, Data Frames.

Unit-3 Control Structures and Functions:

Control Structures: Pass, Break, Continue. If, Like, Nested If. Conditional Statements (For and While Loops) and their applications (Mixed statements). Functions: Defining and calling functions. Parameters and return values. Lambda function.

Unit-4 File & Exceptional Handling:

Reading and writing files (text/csv/excel), Handling common file-related errors. Introduction to exceptions and try-except blocks. Converting data frames into files and vice-versa. Appending & Editing files.

Unit-5 Introduction to Libraries:

Importing libraries in Python-pip installation. Introduction to Pandas for data manipulation. Intro to NumPy. Data Visualization with Matplotlib and Seaborn. Tabulation using Python.

Academic integrity

- Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable in GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Operations Management

Course Code	DPM207
Course Credits	3
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction

The aim of this course is to develop an understanding of the strategic and operational issues in the operational/ manufacturing environment of any organization and the various decisions involved in the operational activities and the methods by which best possible alternative decision can be taken.

Teaching Pedagogy

The pedagogy for this course integrates conceptual learning with practical applications to help students understand and manage operational processes effectively. Interactive lectures are combined with case studies, real-world examples, and group discussions to encourage critical thinking and collaborative learning. Emphasis is placed on strategic and tactical decision-making in manufacturing and service operations, supported by the analysis of supply chain management and emerging technologies like AI. Practical tools and frameworks are introduced to enable students to analyze and solve operational problems. Continuous engagement through assignments and class participation fosters deeper understanding and application of concepts. Academic integrity is emphasized to nurture ethical and responsible management professionals

Programme Outcomes

After completing PGDM a student should be able to.

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork.
PO5	Higher employability quotient

Course Outcomes:

After taking this course a student shall be able to.

CO1	Understand the fundamental, practical science of Operations Management
CO2	Examine how these principles operations management can be employed in both tactical and strategic decision making in firms.
CO3	Develop the ability to analyze and address problems related to the design, planning, control, and improvements of manufacturing and service operations.
CO4	Understand the basics of Supply Chain Management.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials, which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning.

Textbooks:

- Operations Management Theory and Practices, B Mahadevan

Reference Books:

- Operations Management: Processes and Value Chains; Krajewski, Ritzman; Prentice Hall Publication
- Operations Management; Norman Gaither and Greg Frazier; Thomson Southwestern Publication.
- Cases in Operations Management, third edition, Prentice Hall- FT, Robert Johnston, Stuart Chambers, Christine Harland, Alan Harrison, Nigel Slack
- Production and Operation management, Kanishka Bedi, Oxford higher Education
- Supply Chain Management, 6/e Sixth Edition, Sunil Chopra, Peter Meindl

CO and PO Mapping:

3 - High Mapping

2 - Medium Mapping

1- Low Mapping

	PO1	PO2	PO3	PO4	PO5
CO1	3	1	2	-	1
CO2	3	2	2	-	1
CO3	3	2	2	-	1
CO4	3	2	2	-	2

Curriculum

Unit-1 Introduction to Operations Management:

Introduction to Operations Management: Definition, need, responsibilities, key decisions of Operation Manager. Production vs Operations Management. Operations as a key functional area in an organization. Transformation process, Input transformed and transforming resources in service and manufacturing units, Using Operations as a competitive advantage. AI in Operations.

Unit-2 Strategic Decisions in Operations Management:

Operation Strategies-Definition, relevance, strategy formulation process, order qualifying and order winning attribute. Process Selection: Definition, Characteristics that influence the choice of alternative processes (volume and variety), type of processes- job shop, batch, mass and continuous, product- process design Matrix and Services design matrix.

Layout Decision: Layout planning – Benefits of good layout, importance, different types of layouts (Process, Product, Group technology and Fixed position layout). Facility Location – Objective, factors that influence location decision, GFA. Capacity Planning: Definition, measures of capacity (input and output), types of planning over time horizon.

Unit-3 Planning and Operational Decisions in Operations Management:

Lean production: Definition of lean production, lean Demand-Pull logic, waste in operations, elements that address elimination of waste. 2 card Kanban Production Control system. Planning Production Schedules, Aggregate Planning and Master Production Scheduling, Inventory Planning, Materials and Capacity Requirement Planning, JIT Manufacturing, Planning and Scheduling, Services Operations. TQM. Six Sigma

Unit-4 Supply Chain Management:

Introduction to supply chain management, Components and essentials of supply chain management. Drivers of supply chain management.

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable in GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Learning and Development II

Course Code	DPM208
Course Credits	1.5
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction

The aim of this course, designed by the Learning and Development (L&D) department, is to equip PGDM students with the essential skills required for placement readiness, internship preparedness, and overall corporate readiness. This trimester-based course aims to prepare PGDM students for internships, placements, and corporate roles. It focuses on communication, building confidence, leadership, and interpersonal skills to ensure career readiness and overall professional growth.

Course Objective

To assess the current level of students.

1. To give a real time GD, Interview practice to the students.
2. To prepare students comprehensively for placements and future career opportunities.

Course Outcomes

After the completion of the course, the student will be able to:

CO1	Understand the core competencies required for placement, internship, and corporate success, including communication, leadership, and interpersonal skills.
CO2	Apply learned strategies to real-time group discussions, interviews, and workplace scenarios to demonstrate professional readiness.
CO3	Develop skills for career enhancement

Course Content

Soft Skill & English Language Module				
Session No.	Topic	Weightage	Activity Planned	Assessment Metrics
1	Group Discussion -I	4 hrs.	Fishbowl Technique Group Discussion on current industry topics. Exhaustive classroom preparation along with cross sectional GD practice. Case based GD / Abstract GD / Problem solving GD / Fishbowl GD	Content, English fluency, Body Language & Confidence, Managerial skills
	Concept and Practice –DPAC Model			
2	Interview Techniques	1 hrs.	Case-based Learning (CBL) Interview Types & Purpose, Online and Offline Interview's	English fluency, Body Language & Confidence

3	Mock Interviews & Feedback -I	4 hrs.	Pre-Placement Preparation (PPP)	Content, English fluency, Body Language & Confidence
	Simulating mock interviews and offering comprehensive feedback on communication skills and body language.		Mock Interview (Situational / Behavioral /Competency based / HR) One on one PI simulation practice for the students.	
4	Industry Vocabulary Fluency	1 hrs.	Industry Lingo -Practice and experiment with industry jargon. A mini-performance or pitch using technical vocabulary.	Correct Usage of Terminology Understanding & Explanation
	Become fluent and confident in using key industry terms correctly in context — improving both communication and comprehension.			
	Trend Intelligence	1 hrs.	Trend Tracker Challenge – Spot, Analyse, Recommend among groups	Trend Identification, Use of Evidence & Sources, Presentation & Delivery
5	develop the skill to monitor, analyze, and respond to current and emerging trends within a specific industry.			
6	Writing Skills	2 hrs.	Hands on practice with the knowledge and skills required to write structured, coherent passage/essay/ email	Grammar, sentence structuring and accurate comprehension
	Email Writing, Passage Writing, Essay Writing			
7	Mastering Assertive Communication	2 hrs.	Speak Up with Confidence– Roleplay and Reflection Focus on “I” statements. Assertively saying “NO”	Attitude, English fluency, Body Language & Confidence
	What is Assertive Communication? - How to be an assertive communicator? - Steps to augment and reflect confident self-expression.			

Consumer Behavior

Course Code	DPMM 01
Course Credits	3
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction:

The entire course will introduce the students with various concepts, principles and theories of consumer Behavior for business decision making. The objective of the course is to equip students with a complete understanding of consumer behavior. The subject provides an overview of consumer behavior to take rational decision making. The course aims to achieve level 3 of bloom's taxonomy (apply) at certain points in the syllabus but the majority portion of the syllabus is enabling to achieve the blooms level 1& 2 (remember & understand).

Teaching Pedagogy

The course will adopt an interactive and application-oriented approach to learning. Classroom sessions will be conducted through lectures, case studies, exercises, video-based learning, role plays, and group assignments to provide both theoretical knowledge and practical insights. Students will be engaged in both individual and collaborative tasks to encourage diverse perspectives and critical thinking.

To maximize learning outcomes, students are expected to come prepared for each session by reading the prescribed chapters, analyzing relevant case studies, and reviewing video content from suggested sources, along with any additional material provided. This preparatory work will enable richer classroom discussions and active participation in experiential activities.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand Fundamentals of all functional areas of management.
PO2	Apply the management knowledge to take better decisions for various given business scenarios.
PO3	Critically analyze business problems and find right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork.
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understand the fundamental concepts of Consumer behaviors and associated factors
CO2	Interpret the consumer decision-making process, to understand their impact on consumer behavior in B2B and B2C contexts..
CO3	Apply concepts of consumer behavior to translate strategies for consumer related decision making

Curriculum

UNIT-I: Introduction to Consumer Behavior:

Consumer Behavior (CB): Nature, scope and Importance, Evolution of CB, Types of CB, CB Transition: From Print and Broadcast Advertising to Social and Mobile Media to Artificial Intelligence, CB of Emerging Demographics, Trust and Retention, Behavioral Targeting, Repositioning, Perceptual Mapping, Adoption and Diffusion of Innovations

UNIT-II: Consumer Buying Decision and Individual behavior:

Consumer Decision Making Process (B2B & B2C) and models, Consumer Motivation and Personality: The

Dynamics of Motivation, Needs & Motives, Consumer Perception: Concept of Perception, Perceptual Selection, Organization & Interpretation, Consumer Imagery, Consumer Learning; Consumer Attitude Formation and Change, Consumer Gifting Behavior.

UNIT-III: Group Dynamics & Consumer Buying Behavior:

Reference groups and word of mouth, Family and its social class standing, cultural influence on consumer behavior, Changing patterns of young customers; Cross-Cultural Consumer Behavior: An International Perspective.

UNIT-IV Consumer Behavior in Rural Markets

Nature, Characteristics and importance of rural economy in India, Rural Market VS Urban Market, Environmental factors affecting buying behavior of rural consumers, Attitudes and behavior of the rural consumers, Marketing mix in rural markets,

UNIT -V Emerging trends in Rural Marketing

Significance of innovation in rural markets, IT Intervention: Importance and initiatives, Digital Penetration and Mobile-First Strategies, E-Commerce, Last-Mile Delivery Innovations and hyper localization, Rural Retail Transformation, PPP model in rural markets, Challenges in Rural Marketing.

Textbooks:

- Schiffman, G L., & Wisenblit J, Kumar Ramesh S., (2014). Consumer Behavior, Prentice-Hall.

Reference Books:

- Loudon, L. D., & Albert, J. Della Bitta. (2017). Consumer Behavior, Indian edition

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable in GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

AI in Human Resource Management

Course Code	DPMH 01
Course Credits	3
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction:

The entire course will enable the students to ensure the best fit between employees and jobs, while avoiding workforce shortages or spares. The curriculum will enable the students to forecast labor demand, analyze present labor supply, and balancing projected labor demand and supply.

Teaching Pedagogy

The teaching methodology will include emphasizing experiential learning through field projects, simulations, and flipped classroom techniques. Students actively engage with real-world challenges by working on field projects that allow them to apply theoretical concepts in practical scenarios. Simulations and case studies further immerse students in decision-making processes, enhancing their problem-solving skills. The flipped classroom model encourages independent learning, where students review content before class, enabling more interactive and application- focused sessions. Additionally, offering certifications on industry-relevant tools and technologies ensures students gain specialized skills, preparing them for dynamic business environments.

Course Objective:

The basic objective of this course is to develop competency in business planning by allowing students to assess the current human resource capacity based on their competencies against the capacity needed to achieve the vision, mission and business goals of the organization. Targeted human resource strategies, plans and programs to address gaps (e.g., hiring / staffing; learning; career development; succession management; etc.) are then designed, developed and implemented to close the gaps.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand fundamentals of all functional areas of management.
PO2	Apply management knowledge to take better decisions for various given business scenarios.
PO3	Critically understand the business problems and find the right management tool to solve them.
PO4	Demonstrate values, ethics, leadership and teamwork.
PO5	Higher Employability quotient.

Course Outcomes:

After taking this course a student shall be able to;

CO1	Understand the Fundamentals of AI in HR
CO2	Discuss the application of AI in HR
CO3	Address Ethical and Legal Implications of AI in HR

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning.

Textbooks:

- Artificial Intelligence for HR: Use AI to Support and Develop a Successful Workforce, Ben Eubanks
- Artificial Intelligence in Human Resource Management: Revolutionize Your HR Management with AI: Dr. Nisha Sharma

Reference Books:

- Human Resource Management: People, Data and Analytics
- AI and Analytics for Leaders: Improve Performance, Process, and Decision Making

Curriculum

Unit 1: Introduction to AI in HR

Role of AI in transforming HR processes, Deploying AI in HR Practices, Introduction to AI tools, Key benefits and challenges of AI in HR, Case studies: Successful AI applications in HR (e.g., Google, IBM).

Unit - II Adopting AI in HR practices

Manpower Planning, AI based Talent Acquisition, HR Chatbots, AI driven workforce planning Application of AI in Onboarding, Employee Training, Performance Appraisal, Employee Retention, Application of AI in person job fit.

Unit - III SMART HRM AI in HR analytics

SMART HRM, HR Analytics, People Analytics Using AI, Predictive and Descriptive Analytics.

Unit – IV Ethical, Legal, and Future Considerations

Ethical issues in AI-driven HR practices, Data privacy and security concerns, Compliance with labor laws and AI governance.

Unit V Challenges and Future Opportunities of AI in HRM

Challenges of AI adoption in HRM, HRM digitalization Success and Future Opportunities, AI and Company Culture and its concomitance with HR Practices

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable in GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalties as per the policies of the Institute

Cost and Management Accounting

Course Code	DPMF 01
Course Credits	3
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction

Cost and Management Accounting is a branch of accounting that focuses on providing information to internal stakeholders, particularly management, to aid in decision-making, planning, controlling, and optimizing the use of resources within an organization. It encompasses various techniques and processes to analyze costs, manage resources efficiently, and support strategic decision-making. This course also integrates Artificial Intelligence (AI) tools and techniques to enhance cost analysis, budgeting, and financial forecasting.

Teaching Pedagogy

- Lecture-cum-Discussion
 - To explain foundational concepts (cost classification, budgeting, CVP, standard costing).
 - Interactive Q&A to enhance conceptual clarity.
- Problem-Solving & Numerical Practice
 - Hands-on exercises for job costing, process costing, CVP, variance analysis, break-even charts.
 - Use Excel & AI-powered models for calculations.
- Case Study Method
 - Cost control decisions, variance interpretation, ESG cost reporting.
 - AI applications in forecasting & fraud detection.
- Technology Integration
 - Excel-based models for budgeting & forecasting.
 - AI simulations for cost optimization and predictive analytics.
 - Use of cost-management software tools (if available).
- Experiential Learning / Projects
 - Mini-project: Prepare a cost sheet for a manufacturing firm.
 - Group project: Apply AI forecasting for sales & cost predictions.
- Peer Learning & Presentations
 - Students present cases of companies using AI in cost management.
 - Group presentations on variance analysis or break-even studies.
- Industry/Expert Sessions
 - Invite professionals (CMA/Finance Managers/Data Scientists) to demonstrate AI-enabled costing applications

Programme Outcomes (POs)

After completing the PGDM Programme, a student should be able to:

PO1	Understand fundamentals of all functional areas of management.
PO2	Apply management knowledge to take better decisions for various business scenarios.
PO3	Critically analyze business problems and determine appropriate management tools to solve them.
PO4	Demonstrate leadership, values, ethics, and teamwork.
PO5	Improve employability quotient with a deeper understanding of modern management tools.

Course Outcomes (COs)

After completing this course, a student shall be able to:

CO1	Analyze costs, interpret variances, and make informed managerial decisions, incorporating AI-driven analytical tools.
CO2	Effectively communicate cost-related information to aid management in decision-making, utilizing AI for real-time data insights.

CO3	Identify and solve cost-related issues within different organizational contexts, using AI-driven forecasting models.
CO4	Understand and apply AI techniques such as machine learning and predictive analytics in cost management.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning.

Textbooks:

- M. L. Agarwal, Cost Accounting, Sahitya Bhawan Publications.
- S.P. Jain and K. L. Narang, Cost Accounting, Kalyani Publications.
- Khan & Jain, Management Accounting, Vikas Publishing House Pvt. Ltd.
- Prof. M. L. Agrawal & K. L. Gupta, Cost and Management Accounting.

Reference Books:

- M. N. Arora, Cost and Management Accounting, Vikas Publications.
- M. Pandey, Management Accounting.
- AI in Accounting and Finance, Wiley Publications.

CO and PO Mapping

Curriculum

Unit 1: Introduction to Cost and Management Accounting

Basics of Cost Accounting, Objectives and Scope, AI-driven cost classification and data automation

Unit 2: Costing Methods and Techniques

Job Costing, Process Costing, Activity-Based Costing (ABC), AI applications in cost allocation and variance analysis

Unit 3: Budgeting and Forecasting

Types of Budgets and Budgetary Control, AI in budgeting and financial forecasting

Unit 4: Decision Making Using Cost Information

Cost-Volume-Profit (CVP) Analysis, Marginal Costing and Break-even Analysis, AI-powered decision support systems

Unit 5: Performance Measurement and Control

Standard Costing and Variance Analysis, AI in financial reporting and fraud detection, Machine learning for performance evaluation

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas or works that are not one's own and which are not common knowledge, without giving credit to the originator. Plagiarism is unacceptable in GIMS and will invite a penalty. The type and extent of the penalty will be at the discretion of the concerned faculty.

Cheating is strictly prohibited at GIMS and will invite penalties as per the policies of the Institute.

SQL for Data Analytics

Course Code	DPMB 01
Course Credits	3
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction

This course emphasis is on understanding the Developing and managing efficient and effective database applications requires understanding the fundamentals of database management systems, techniques for the design of databases, and principles of database administration. This course emphasized database concepts, developments, use and management in three main sections: database concepts, practice, and emerging trends. Practical application of Relational database systems and its command.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understand the fundamental elements of relational database management systems. Will be clear with the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL.
CO2	Design ER-models to represent simple database application scenarios. Enhance the knowledge of the processes of Database Development and Administration using SQL.
CO3	Convert the ER-model to relational tables, populate relational databases and formulate SQL queries on data. Execute the commanding functions on various DB platforms.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Textbook

- R. Elmasri and S.B. Navathe, “Fundamentals of Database Systems”, Addison Wesley

Reference Book

- SQL, PL/SQL - The Programming Language of Oracle Ivan Bayros
- Gary W. Hanson and James V. Hanson, “Database Management and Design”, Prentice Hall of India Pvt Ltd, 1999

CO and PO Mapping

- 3 - Highly Mapping
- 2 - Medium Mapping
- 1 - Low Mapping

Curriculum

Unit-1 Introduction:

Introduction to database, relational data model, DBMS architecture, data independence and data abstraction, DBA, database users, end users, front end tools.

Data Modelling: Entity types, entity set, attribute and key, relationships, relation types, ER diagrams, database design using ER diagrams.

Unit-2 Relational Data Model:

Relational model concepts, relational constraints, primary and foreign key, candidate key, alternate, composite, super-key. Structured Query Language: Introduction to SQL, concepts of Data Definition Language (DDL) and Data Manipulation Language (DML), DDL queries like create a database, drop a database, create table, drop table, alter table, Constraints, Not Null, Unique, Views, Injections. DML queries like inserting-deleting-updating data in a table, select, distinct, where order by, AND, OR, NOT, BETWEEN, IN, Select Top, Aggregate Functions, Min, Max, Count, Sum, Avg, Like, Wildcards, Aliases, Joins – Inner, Left, Right, Full Join, Self Join. Union, Group By, Having, Null Functions, SQL Case, Stored Procedures, SQL Operators.

Unit-3 Create relationships between database tables,

aggregate functions - min, max, count, average, sum, nested sub-queries, group by, having, order by. Join operations - inner, left join, right join, natural join. Generating Reports in SQL.

Unit-4 Normalization:

Concept of Insertion-Deletion-Update Anomalies, Meaning and Concept of Functional Dependencies, Significance of Functional Dependencies in Relational Decomposition, Normal Forms – 1NF, 2NF, 3NF and BCNF decomposition.

Unit-5 Introduction to NoSQL Databases, NoSQL features,

Different types of NoSQL databases. Introduction to MongoDB, Data modelling in MongoDB, Advantages of MongoDB over RDBMS, Mongo Shell, Configuration file in MongoDB.

JSON File format for storing documents, Database Commands in MongoDB, Inserting and Saving Documents, Updating Documents, Removing Documents, Document Replacement.

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute

International Strategic Management

Course Code	DPMIB 01
Course Credits	3
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction

International Strategic Management helps in understanding the strategic concept, global business environment, scanning of internal environment. Strategic Management is always instrumental in setting up the vision, mission, goal and objectives of the organizations, which are the driving force of the business. It is possible for companies to conduct business in almost any country around the world, due to a better understanding of our strategic initiatives. Global strategy analysis helps to know that planning, evaluating and executing alternate options which could help in help in delivering/getting at competitive rates, promotions and distribution of products and services at global market. In recent times, companies are not restricted to their national borders but are open for international business. With the increasing change in customers' demands, choices, preferences and tastes, the economies are expanding and giving way to more competitive opportunity for International Business. Thus, organizations need to respond rapidly to the demands of the customers with well-defined International Strategic Management.

Teaching Pedagogy

The teaching methodology will include lectures using power point, case studies, articles, group discussions and presentations. Interaction during lectures will be encouraged and therefore each student is expected to add valuable input during lectures by sharing his/her knowledge. Students will be required to work on the assignments and individual presentations.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	To understand the concept of International Strategic Management.
CO2	To understand the Global business environment and scanning of internal environment. of any organization.
CO3	To understand the importance of vision and objectives of our own organization and the importance of global strategy analysis.

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Curriculum

Unit-1 Introduction to Strategic Management

Strategic Management Concepts and Characteristics – Emergence of International Strategic Management (ISM) – importance of ISM - Strategic Management Process - Forces necessitating the adoption of ISM concept by MNC's as well as Indian Companies.

Unit-2 Global Business Environment

Global business environment - Nature, components of External Environment – PESTEL study - Industry analysis - SWOT analysis – External sector evaluation matrix- IE matrix - Porters Five forces model - Corporate capability analysis –Diagnosing industry globalization potential– Building global market participation – Competition in global industries – competitor profile matrix - Regional strategy.

Unit-3 Key Framework for International Strategic Management

Internal Environment Scanning – Resources, Capabilities, Core competencies – Significance of core competence concept in strategy making –GAP analysis – Mc Kinsey's 7s Framework – GE 9 cell model. Value Chain Analysis and its significance – Balanced Scorecard.

Unit-4 Corporate Strategy and Corporate Governance

Setting Vision, Mission, goal and corporate objectives – External and Internal forces interacting with corporate objectives – Types of strategy - Generic strategies - Business level - Corporate level - Stability strategy – Growth and diversification strategy.

Unit-5 Corporate and Global Strategies

Conducting a global strategy analysis - Identifying strategic alternatives– Implementing corporate strategy – Strategic control and operational control – case studies.

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable in GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.

Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Foundation of Entrepreneurship and Start- Up

Course Code	DPME 01
Course Credits	3
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction

The goal of this course is to inspire students and help them imbibe an entrepreneurial mindset. The students will learn what entrepreneurship is and how it has impacted the world and their country. They will be introduced to key traits and the DNA of an entrepreneur and be given an opportunity to assess their own strengths and identify gaps that need to be addressed to become a successful entrepreneur. Apart from entrepreneurial mindset, the course provides a great understanding of data analysis and experiment design that leads to the testing of innovative ideas.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class-discussions, cases, and group projects. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	To understand the DNA of an entrepreneur and assess their strengths and weaknesses from an entrepreneurial perspective.
CO2	To develop the right understanding creativity & innovation and analyse the challenges for managing startups.
CO3	To understand and explore the government initiatives for business development Skill India

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given video lecture links of the teaching faculty to clear the doubts after the classroom.

Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Strategic Supply Chain Management

Course Code	DPMS 01
Course Credits	3
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction

This course in Strategic Supply Chain Management provides an overview of supply chain management as a key business function that holistically integrates cross-functional business processes within the firm and across the network of firms that comprise the supply chain. The challenge is to overcome the major obstacles to managing a supply chain and successfully accomplish this integration. The course will explain the impact of supply chain decisions on the success of a firm and will help students understand how a company achieves strategic fit between its supply chain strategy and its competitive strategy. The course will provide an understanding of the components and processes of supply chain and logistics management as well as the performance drivers of supply chain and the role each driver plays in creating strategic fit between the supply chain strategy and the competitive strategy.

Teaching Pedagogy

The teaching methodology will include lectures using power point, case studies, articles, group discussions and presentations. Interaction during lectures will be encouraged and therefore each student is expected to add valuable input during lectures by sharing his/her knowledge.

Students will be required to work on the assignments and individual presentations.

Programme Outcomes

After completing PGDM Programme a student should be able to.

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

CO1	Understand the basic concepts of supply chain Management and establish the impact of supply chain decisions on a firm's performance.
CO2	Identify and describe the relationship between supply chain strategy and competitive strategy of a firm.
CO3	Identify the major drivers of supply chain performance & understand the role of each driver in creating strategic fit

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Design Thinking

Course Code	DPM301
Course Credits	1.5
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction

Design thinking is a human-centered problem-solving approach that emphasizes understanding user needs, rapid prototyping, and generating innovative solutions. It's a process, not just a linear one, that helps teams tackle complex, ill-defined problems by understanding users, challenging assumptions, and creating innovative solutions through iterative prototyping and testing. The core stages are Empathize, Define, Ideate, Prototype, and Test.

Teaching Pedagogy

Design Thinking is a mindset and approach to learning, collaboration, and problem solving. In practice, the design process is a structured framework for identifying challenges, gathering information, generating potential solutions, refining ideas, and testing solutions

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

CO1	Apply both critical thinking and design thinking in parallel to solve problems
CO2	Apply some design thinking concepts to their daily work
CO3	Provide a thinking space for innovation of new ventures, value propositions, new products or services.

	PO1	PO2	PO3	PO4	PO5
CO1	1	2	3	1	2
CO2	1	2	2	2	1
CO3	1	1	1	--	2

Curriculum

Unit-1: Design Thinking Background

Definition of Design Thinking, Business uses of Design Thinking, Variety within the Design Thinking Discipline, Design Thinking Mind-Set

Unit-2: General Approaches to Design Thinking

The basis for design thinking, design thinking frameworks, the design thinking team, design thinking workshops and meetings.

Unit-3: A Design Thinking Approach in Stages

Apply the design thinking frameworks, empathize with the customers and/or users, define the problem, ideate, prototype alternate solutions, test the solutions.

Unit-4: Design Thinking Techniques

Listening and empathizing techniques: Engagement, observation, showing empathy. Define and ideation techniques: Unpacking, personas, pattern recognition and connecting the dots. Prototype and test techniques: Types of prototypes, forms of testing in design thinking.

Unit-5: General Design Thinking Practices

Visualization techniques and diagrams: Use of diagrams and maps in design thinking. Storytelling Techniques: Storytelling throughout the design thinking process, improvisation, scenarios, K-Scripts.

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable in GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Business Research Methods

Course Code	DPM302
Course Credits	3
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction

Business Research Methods is an important area of study for management graduates. The course hones the aspirants' research-based decision-making skills. The course provides learning in qualitative and quantitative research methods. The industry scope of the course is very high as business decisions in contemporary time are research and analysis driven. Apart from business decisions, the course provides a great understanding of data analysis and experiment design that leads to the testing of innovative ideas.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understand the research methods for all functional areas of management
CO2	Design the experiments for management research
CO3	Analyze the output of experiments for effective decision making

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning

Textbook

- Donald R. Cooper, Pamela S. Schindler, Business Research Methods, McGraw- Hill/Irwin.
- Reference Books
- Deepak Chawla, Neena Sondhi, Research Methodology Concepts and Cases, Vikas Publishing House Pvt. Ltd.
- William G. Zimkund, Barry J. Babin, John C. Carr, Mitch Griffin, Business Research Methods, Cengage

CO and PO Mapping

3 - Highly Mapped

2 - Medium Mapped

1 - Low Mapping

	PO1	PO2	PO3	PO4	PO5
CO1	3	3	3	1	2
CO2	3	2	3	1	2
CO3	3	2	2	1	2

Curriculum

Unit-1 Introduction to Business Research.

Meaning of research; Types of research: Exploratory research, Conclusive research; The process of research; Research applications in social and business sciences; Features of a Good research study. Defining the Research Problem; Management Decision Problem vs Management Research Problem; Problem identification process; Components of the research problem.

Unit-2 Research Designs

Meaning of Research Designs; Nature and Classification of Research Designs; Exploratory Research Designs: Secondary Resource analysis, Case study Method, Expert opinion survey, focus group discussions; Descriptive Research Designs: Cross sectional studies and Longitudinal studies; Experimental Design. Classification of Data; Secondary Data: Uses, Advantages, Disadvantages, Types and sources; Primary Data Collection: Observation method, Focus Group Discussion, Personal Interview method.

Unit-3 Questionnaire Design

Questionnaire method; Types of Questionnaires; Process of Questionnaire Designing; Advantages and Disadvantages of Questionnaire Method.

Unit-4 Qualitative and Quantitative Data Analysis

Introduction to Qualitative and Quantitative Data Analysis, Types of Qualitative and Quantitative Data Analysis, Application of Qualitative and Quantitative Data Analysis. Discussion on business research papers. Using AI and ML for Data Analysis.

Unit-5 Research Report Writing and Ethics in research

Types of research reports – Brief reports and Detailed reports; Report writing: Structure of the research report- Preliminary section, Main report, Interpretations of Results and Suggested Recommendations; Report writing: Formulation rules for writing the report. Meaning of Research Ethics; Clients Ethical code; Researchers Ethical code; Ethical Codes related to respondents; Responsibility of ethics in research.

Academic integrity

- Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalties as per policies of the Institute.

Customer Relationship Management

Course Code	DPM303
Course for	PGDM
Course Credits	1.5
Term	III
Session duration	60 mins each session

Introduction

This course offers a comprehensive exploration of Customer Relationship Management (CRM), focusing on its core concepts, principles, and strategic importance in modern business. Designed for aspiring business leaders, it equips students with the knowledge to understand and apply CRM strategies effectively, fostering long-term customer loyalty and enhancing organizational performance. The course aims to achieve level 3 of bloom's taxonomy (apply) at certain points in the syllabus but the majority portion of the syllabus is enabling to achieve the blooms level 1 & 2 (remember & understand).

Course Outcomes

After taking this course a student shall be able to;

CO1	Understand the fundamental concepts of CRM.
CO2	Interpret customer-related concepts to support relationship-building strategies.
CO3	Apply CRM strategies for customer-centric initiatives and utilize CRM tools and metrics.

Curriculum

Unit I - Evolution of Customer Relationship

CRM- Definition, Emergence and scope of CRM Practice, Factors responsible for CRM growth, CRM process, framework of CRM, Benefits of CRM, Types of CRM, CRM and AI Intervention, Future Trends in CRM, CRM and Cost-Benefit Analysis (CBA), CRM and Relationship Marketing.

Unit II - Importance of Understanding CRM

Customer Value, Customer Expectation, Customer Satisfaction, Customer Acquisition, Customer Retention, Customer Loyalty, Customer Lifetime Value. Customer Experience Management, , Enterprise Marketing Management, Customer Satisfaction Measurements, Web based Customer Support.

Unit III - Planning for CRM

Steps in Planning-Building Customer Centricity, Setting CRM Objectives, Elements of CRM plan, CRM Strategy: The Strategy Development Process, Customer Strategy Grid.

Unit IV - CRM and Marketing Strategy

CRM Marketing Initiatives, Sales Force Automation, Campaign Management. Practice of CRM: CRM in Consumer Markets, CRM in Services Sector, CRM in Mass Markets, CRM in Manufacturing Sector.

UNIT -V: CRM Planning and Implementation

Issues and Problems in implementing CRM, Information Technology tools in CRM, Challenges of CRM Implementation. CRM Implementation Roadmap, Road Map (RM) Performance: Measuring CRM performance, CRM Metrics.

Textbooks:

- Buttle, F. (2009). Customer relationship management: Concepts and technologies (2nd ed.). Butterworth-Heinemann.

Advanced Managerial Communication

Course Code	DPM304
Course Credits	1.5
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction

Advanced business communication is a core course which serves as a comprehensive approach to combine theoretical knowledge with practical applications in terms of communication in corporate scenario. The course will acquaint the students to demonstrate the use of advanced communication techniques, comprehend and develop various contextual business writing as well as non-verbal communication techniques effectively. The course is structured to meet the apply level of bloom's taxonomy.

Programme Outcomes

After completing the PGDM Programme a student should be able to:

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understand the various contextual business communication formats.
CO2	Create meaningful types of business writing and presentation material as per the business requirement
CO3	Demonstrate the ability to craft ethical communication strategies and manage organizational messaging during crises.
CO4	Apply communication and negotiation techniques to effectively manage interpersonal and group dynamics in professional settings.

Textbook

- Lesikar, R.V., Flatley M.E., Rentz, K., &Pande N., Business Communication: connecting in a Digital World, McGraw Hill Education.
- Bovee, C.L, Thill, J.V & Raina, R.L, Business Communication Today, Pearson Education.

Negotiation techniques and communication dynamics, Emotional intelligence in persuasive managerial conversations, Cross-cultural negotiations.

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalties as per policies of the Institute.

Learning and Development III

Course Code	DPM305
Course Credits	1.5
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction

The aim of this course, designed by the Learning and Development (L&D) department, is to equip PGDM students with the essential skills required for placement readiness, internship preparedness, and overall corporate readiness. This trimester-based course aims to prepare PGDM students for internships, placements, and corporate roles. It focuses on communication, building confidence, leadership, and interpersonal skills to ensure career readiness and overall professional growth

Course Objective

- To assess the current level of students.
- To give real time GD, Interview practice to the students.
- To prepare students comprehensively for placements and future career opportunities.

Course Outcomes

After the completion of the course, the student will be able to:

CO1	Understand the core competencies required for placement, internship, and corporate success, including communication, leadership, and interpersonal skills.
CO2	Apply learned strategies to real-time group discussions, interviews, and workplace scenarios to demonstrate professional readiness.
CO3	Develop skills for career enhancement

Course Content

Soft Skill & English Language Module				
Session No.	Topic	Weightage	Activity Planned	Assessment Metrics
1	Presentation Skills	3 hrs.	Problem-based Learning (PBL) Trend Quest: Presentation on Industry Trends in different areas (batch specific) Presentation activity for each specialization	Content, English fluency, Body Language & Confidence
	Do's and Don'ts of Presentation, Types of Presentation, how to make impressive Presentation projecting business model			

2	Productivity Rhythm / Tackling Procrastination	1 hrs.	Flipped Classroom The Eisenhower Matrix Sprint Prioritization, Time management	Decision making, effective time management, teamwork, coordination and collaboration, communication.
	What is Procrastination? - How to overcome Procrastination			
	What is Productivity Rhythm?			
3	Building positive Attitude/ Attitude at Work	1 hrs.	Think-Pair-Share Reframe the Negative 1. Yes.... : Mindset shift exercise from negative to positive and fostering a solution-oriented attitude.	Content, Communication & Confidence
	Attitudes that are important in workplaces - How to project a positive attitude? - How to develop a positive attitude in the workplace? - Benefits of positive thinking in the workplace How to train yourself to have an optimistic mindset? - Ways You Can follow to Build a positive attitude			
4	Critical Thinking	1 hrs.	Case-based Learning Debate It Out: Exploring Both Sides: Divide into groups and have students argue different perspectives on a controversial topic / current topic, using supportive statements and logic.	Content, English fluency, Case Study Google Form Body Language
	What is Critical thinking? Its importance, Case Studies			
5	Conflict Management Skills	1 hrs.	Role Play: Corporate Scenarios	Content, English fluency, Body Language, Case Study, Attitude, Decision making
	What is Conflict Management? - What Are Conflict Management Skills? – Why			
	Employers Value Conflict Management Skills? - Types of			

	Conflict Management Skills			
6	Group Discussion -II	4 hrs.	Fishbowl Technique Group Discussion on current industry topics. Exhaustive classroom preparation along with cross sectional GD practice. Case based GD / Abstract GD / Problem solving GD / Fishbowl GD	Content, English fluency, Body Language & Confidence, Managerial skills
	Concept and Practice – DPAC Model			
7	Personal Interview -II	4 hrs.	Pre-Placement Preparation (PPP) Mock Interview (Situational / Behavioral / Competency based / HR / CBD) One on one PI simulation practice for the students.	Content, English fluency, Body Language & Confidence
	Simulating mock interviews for the students-PPP			

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. Type and extent of penalty will be at the discretion of the faculty concerned.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalties as per policies of the Institute.

Sales Distribution and Retail Management

Course Code	DPMM 02
Course Credits	3
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction

This course will help the students to develop critical skills for generating, evaluating and selecting sales and distribution and retail strategies. This subject will cover the concepts, attitudes, techniques and approaches required for effective decision making in the areas of Sales, Distribution and Retailing.

The course objective is to foster a comprehensive understanding of sales management, distribution and retailing. The course will equip students with expertise in sales management and channel management, distribution concepts and supply chain management. The course aims to achieve level 3 of bloom's taxonomy (apply) at certain points in the syllabus, but the majority portion of the syllabus is enabled to achieve the blooms level 1& 2 (remember & understand).

Teaching Pedagogy

The course will be delivered through a mix of lectures, case studies, role plays, and group discussions, supported by real-world examples from sales and retail practices. Students will engage in individual and group assignments to apply concepts to practical scenarios. Pre class readings, cases, and relevant articles will be recommended to ensure meaningful participation and insightful discussions in class.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand Fundamentals of all functional areas of management.
PO2	Apply the management knowledge to take better decisions for various given business scenarios.
PO3	Critically analyze business problems and find right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

CO1	Define and describe the fundamental concepts of sales management, personal selling, channel structures, and retailing.
CO2	Explain and differentiate the strategies and processes involved in sales planning, channel design, and retailing, with attention to consumer behavior and sales force administration.
CO3	Apply relevant sales, distribution and retail strategies for better decision making.

Curriculum

UNIT- I Introduction to Sales Management:

Overview of Sales Management, Understanding Sales Force Management, Sales planning, Sales forecasting methods, Sales Organization Structures, Sales Quotas, Sales Promotion (Trade & Business), Sales budgets, sales territories, training and motivation of sales force, sales force conflict, sales reports and audits and performance evaluation of sales force, Modern Roles and Required Skills for Sales Managers.

UNIT- II Personal Selling & Salesmanship:

Theories of personal selling, Market mapping, customer profiling, Proposals and bids, Personal Selling process: Prospecting, Lead generation, pre approach and approach, Presentation, Product demonstration, Negotiation, Closure and follow up, sales cycle & cash cycle.

UNIT- III Distribution & Channel Management:

Channel Management-Introduction, Marketing Channels, Designing Channels, Selection and Recruitment of Channel Partners, Factors affecting channel selection, Channel Motivation, Channel Relationships Management, Channel Evaluation, channel conflict and mitigation, 3PL & 4 PL, Wholesaling: Trends & Challenges, Omni channel Distribution, E-Commerce (B2C & B2B), Channel Switching Behavior, Web rooming and showrooming

UNIT- IV Foundations of Retailing and Consumer Understanding:

Introduction to Retailing: Concepts, functions, evolution, formats, organized vs Unorganized Retail & Retail in India: Emerging trends and structure, Retail Consumer Behavior & STP: Buying preferences, retail segmentation, Retail Marketing Mix Product, Pricing, Space & Branding, Promotion strategies, In-store communication, AI in Retail Consumer Insights & Promotion: Personalization, recommendation engines, chatbot marketing

UNIT- V Retail Operations, Strategy & Technology Integration:

Retail Operations Structure: HR, finance, store layout, Merchandising & Category Management: Planning, sourcing, shelf strategy, SCM & CRM in Retail: Logistics, demand planning, loyalty programs, Retail Strategy Formulation: Competitive positioning, challenges, Retail vs E-commerce & International Retailing: Omnichannel retail, AI in Retail Operations & Strategy: Predictive analytics, smart SCM, visual merchandising tech, international best practices

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice regularly to augment classroom learning. Students will also be given the video lecture links of the teaching faculty to clear their doubts after the classroom.

Marketing Analytics

Course Code	DPMM 03
Course Credits	3
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction

The program is focused on practical application, with a significant emphasis on exercises marketing. Throughout the course, fundamental concepts related to marketing metrics will be reviewed and put into practice using real-world industrial data. The course objective is to foster a comprehensive understanding of marketing analytics principles. With the use of marketing analytics, students will be able to understand, interpret, control, and analyze consumer trends and preferences in addition to assessing marketing efficacy using excel. The course aims to achieve level 3 of Bloom's taxonomy

Teaching Pedagogy

The pedagogy for this course will focus on a balance of conceptual understanding and data driven application. Classroom learning will include lectures supported by case studies, research articles, and practical exercises to build a strong foundation in marketing analytics. Students will be encouraged to actively participate in discussions and share insights on how analytics shapes modern marketing decisions. Hands-on learning will form a key component of the course. Students will work with datasets, analytical tools, and software applications (such as Excel, SPSS, R, Python, Google Analytics, or Tableau) to gain practical exposure. Group projects, assignments, and presentations will enable collaborative problem-solving and the application of analytics to real-world business problems.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand Fundamentals of all functional areas of management.
PO2	Apply the management knowledge to take better decisions for various given business scenarios.
PO3	Critically analyze business problems and find right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork.
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to:

CO1	Understand the concepts of marketing analytics
CO2	Interpret strategies related to marketing analytics for better understanding of market scenarios.
CO3	Apply concepts and strategies related to marketing analytics for better marketing decision making.

Curriculum

UNIT- I Introduction:

Introduction to marketing analytics: scope and significance of AI in marketing analytics, using excel to summarize marketing data: slicing and dicing marketing data with pivot tables, using excel charts to summarize marketing data, using excel functions to summarize marketing data.

UNIT- II Product Analytics

Forecasting: simple linear regression and correlation, using multiple regression to forecast sales, forecasting during special events, modeling trends and seasonality, ratio to moving average forecasting methods, winter's method: AI tools for dynamic forecasting.

UNIT- III Pricing and Customer Analytics

Pricing: Estimating demand curves and using solver to optimize price, AI-enhanced demand forecasting. price bundling, nonlinear pricing, price skimming and sales, revenue management.

Customer Value: calculating lifetime customer value, using customer value to value a business, customer value, Monte Carlo simulation and marketing decision making, allocating resources between customer acquisition and retention.

UNIT- IV Retailing Analytics

Retailing: market basket analysis and lift, RFM analysis and optimizing direct mail campaigns, using SCAN*pro model and its variants, AI applications for retail analytics and space optimization. allocating retail space and sales resources, forecasting from a few data points.

UNIT- V Advertising Analytics

Advertising: measuring the effectiveness of advertising, media selection models, using AI for optimized media planning and allocation, pay per click (PPC) online advertising.

Industrial Relations and HR Legislations

Course Code	DPMH 02
Course Credits	3
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction:

The entire course will acquaint the students with concepts of Industrial relations aimed at maintaining healthy, harmonious and cordial relationships between the employees and management and amongst the employees.

Teaching Pedagogy

The teaching methodology will include emphasizing experiential learning through field projects, simulations, and flipped classroom techniques. Students actively engage with real-world challenges by working on field projects that allow them to apply theoretical concepts in practical scenarios. Simulations and case studies further immerse students in decision-making processes, enhancing their problem-solving skills. The flipped classroom model encourages independent learning, where students review content before class, enabling more interactive and application- focused sessions. Additionally, offering certifications on industry-relevant tools and technologies ensures students gain specialized skills, preparing them for dynamic business environments.

Programme Outcomes

After completing PGDM a student should be able to.

PO1	Understand fundamentals of all functional areas of management.
PO2	Apply management knowledge to take better decisions for various given business scenarios.
PO3	Critically understand business problems and find the right management tool to solve them.
PO4	Demonstrate values, ethics, leadership and teamwork.
PO5	Higher employability quotient.

Course Outcomes

After taking this course a student shall be able to.

CO1	To understand the fundamentals of Industrial Relations and Labor Legislations
CO2	To understand the basic concepts of laws governing wages and social security.
CO3	To develop the ability to handle conflicts and disputes thereby acquiring the compliances

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given video lecture links of the teaching faculty to clear the doubts after the classroom.

HR Analytics & Metrics Professionals

Course Code	DPMH 03
Course Credits	3
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction

Analytics and Metrics Professional is an important core course designed for PGDM students or pursuing HRM as specialization as well as HR professionals. This course is related to various HR metrics and their importance from an enterprise point of view. In this course students will learn different HR Functions and how to quantify them for effective decision making for your organization. Also, it will have better understanding, better control, and better hold of this function, so we can contribute in the large manner to the overall business objective. All in all, to align our HR objective to put it toward the overall business goal, one must have to fine tune this HR function, so that we can be able to quantify them. The course is structured to meet the apply level of bloom's taxonomy at certain points but largely it is designed to meet the level of understanding level of the taxonomy.

Teaching Pedagogy

The teaching methodology will include emphasizing experiential learning through field projects, simulations, and flipped classroom techniques. Students actively engage with real-world challenges by working on field projects that allow them to apply theoretical concepts in practical scenarios. Simulations and case studies further immerse students in decision-making processes, enhancing their problem-solving skills. The flipped classroom model encourages independent learning, where students review content before class, enabling more interactive and application- focused sessions. Additionally, offering certifications on industry-relevant tools and technologies ensures students gain specialized skills, preparing them for dynamic business environments.

Program Outcomes

After completing PGDM a student should be able to.

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership and teamwork skills
PO5	Higher employability quotient

Course Objective:

To provide better insight into each of the human resource processes, gathering related data and then using this data to make informed decisions on how to improve these processes.

Understand the importance of HR metrics and analytics in measuring HR impact and drive business results. Identify the right HR metrics (what to measure, types of measurements etc.), Aligning HR and business goals. Turn metrics into analytics for effective management decisions.

Programme Outcomes

After completing PGDM a student should be able to.

PO1	Understand fundamentals of all functional areas of management.
PO2	Apply management knowledge to take better decisions for various given business scenarios.
PO3	Critically understand the business problems and find the right management tool to solve them.
PO4	Demonstrate values, ethics, leadership and teamwork.

PO5	Higher Employability quotient.
-----	--------------------------------

Course Outcomes

After taking this course a student shall be able to.

CO1	To have a practical understanding of HR metrics.
CO2	To learn about HR analytics and its application in business.
CO3	To learn about performance enhancement measures and its relationship with HR metrics.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

Textbooks:

- The 12 Best HR Analytics Books on Our Reading List
- Human Capital Analytics: How to Harness the Potential of Your Organization's Greatest Asset
- Human Resource Information Systems: Basics, Applications, and Future Directions
- The Basic Principles of People Analytics: Learn How to Use HR Data to Drive Better Outcomes for Your Business and Employees

Suggested Readings:

- Fitz-Enz, J., The New HR Analytics: Predicting the Economic Value of Your Company's Human Capital Investments, American Management Association.
- Bassi, L., Carpenter, R., and Mc Murrer, D., HR Analytics Handbook, Reed Business
- Prasad, B. V. S., and Sangeetha, K., HR Metrics: An Introduction, IUP
- The power of people, 1E, Guenole
- Applying Advanced Analytics to HR Management Decisions, Sesil, Pearson
- HR Analytics: Connecting data and Theory, Yadav, Wiley
- People Analytics for dummies, West, Wiley

CO and PO Mapping

3 - High Mapping

2 - Medium Mapping

1 - Low Mapping

CO 1	3	3	2	1	2
CO 2	3	2	2	1	2
CO 3	2	2	2	1	2

Curriculum

Unit- I Introduction to HR Analytics:

Introduction to Human Resource Analytics, Basics of HR Analytics, what is Analytics, Evolution, Analytical capabilities, Analytic value chain, Analytical Model, Typical application of HR analytics, Descriptive and Predictive Analytics.

Unit –II HR Indicators & Metrics:

Understanding HR indicators, metrics and data HR Maturity Framework: From level 1 to level 5, HR Analytics Frameworks: (a) LAMP framework; (b) HCM:21 Framework and (c) Talent ship Framework, 5 overarching components of an effective Analytics framework.

Unit - III Descriptive and Predictive Analysis in HRM:

HR Data entry Introduction to Descriptive Statistics Data analysis: Correlation Data analysis: Regression Data analysis: Comparing two means Data analysis: ANOVA.

Unit - IV Analytics for HRM Sub-systems:

Work force planning analytics Talent sourcing analytics Talent acquisition analytics On-boarding and culture fit Talent engagement analytics Analytical performance management Using retention analytics to protect your most valuable asset.

Unit V Emerging Trends in HR Analytics

HR Analytics tools, creating dashboards, AI Driven HR Analytics

Pedagogy

The teaching methodology will include emphasizing experiential learning through field projects, simulations, and flipped classroom techniques. Students actively engage with real-world challenges by working on field projects that allow them to apply theoretical concepts in practical scenarios. Simulations and case studies further immerse students in decision-making processes, enhancing their problem-solving skills. The flipped classroom model encourages independent learning, where students review content before class, enabling more interactive and application- focused sessions. Additionally, offering certifications on industry-relevant tools and technologies ensures students gain specialized skills, preparing them for dynamic business environments.

Academic integrity

Plagiarism is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.

Cheating means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Security Analysis and Portfolio Management

Course Code	DPMF 02
Course Credits	3
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction

Security and portfolio analysis encompass evaluating diverse options to build portfolios tailored toward achieving precise financial objectives while mitigating risk. This process entails assessing the risk linked to each investment, identifying how investments can synergize to mitigate risk, and utilizing diversification to counter losses in case of underperformance within a specific sector or asset class. Strategic allocation of funds across a spectrum of asset classes such as stocks, bonds, real estate, and commodities hinges on factors like risk tolerance, investment timeline, and desired financial milestones. The course is designed to meet the applied level of Bloom's taxonomy at specific points, but largely it is designed to meet the level of understanding and application of the taxonomy.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on financial models using excel, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Program Outcomes

After completing PGDM Programme a student should be able to.

PO 1	Understand Fundamentals of all functional areas of management.
PO2	Apply management knowledge to take better decisions for various given business scenarios.
PO3	Critically analyze business problems and find the right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork.
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Fundamental concepts of investment analysis, portfolio construction, and risk management
CO2	It helps to develop the ability to assess and manage risks associated with diverse investment opportunities, understanding their impact on portfolio performance.
CO3	Familiarity with analytical tools like Modern Portfolio Theory (MPT), Capital Asset Pricing Model (CAPM), and performance evaluation metrics for effective portfolio analysis and optimization.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given video lecture links of the teaching faculty to clear the doubts after the classroom.

Tax Planning and Management

Course Code	DPMF 03
Course Credits	3
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction

Tax Planning and Management is an important area of study for management graduates. The course hones the aspirants' decision-making skills regarding their personal as well as corporate tax planning and management. The course provides learning about the rules and regulations related to computation as well as tax management. The industry scope of the course is very high as tax management is one of the key decisions to be taken by managers of finance. It is contemporary as it helps the organizations to not only reduce their tax liabilities but also helps them in avoiding any kind of penal actions due to negligence.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class-discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class

Programme Outcomes

After completing PGDM Programme a student should be able to.

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

CO1	Understand the basic concepts of taxation
CO2	Learn various rules to calculate tax on income and rules related to ITR filing
CO3	Develop capabilities of tax planning for individuals and corporates in India

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Analytics for Managers using Python

Course Code	DPMB 02
Course Credit	3
Course	PGDM
Term	III

Introduction

This Python code and associated tasks form a robust end-to-end data analysis and visualization pipeline. It not only ensures the cleanliness and readiness of the data for analysis but also employs a variety of visualization techniques, from basic to advanced, to tell a compelling and informative story about the real-world dataset. The inclusion of interactive dashboards enhances user engagement and facilitates interactive exploration of the dataset's insights.

Teaching Pedagogy

The course will be based on Class room lectures, Exercises based on class-discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to.

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Importing data from diverse sources, exploring datasets and ensuring effective data manipulation.
CO2	Expertise in descriptive statistics, visualization methods and correlation analysis, enabling them to draw meaningful insights from data using Matplotlib and Seaborn.
CO3	Develop skills in creating compelling visualizations, facilitating effective data storytelling and communication.
CO4	Understand the fundamentals of interactive dashboard creation and build a strong foundation in Python packages for data science.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

CO4	1	2	3	1	2

Curriculum

Unit-1 Data Sets

Understanding the Data – continuous & discontinuous, qualitative & quantitative, data structures, data types, outliers, missing values, etc. Python Packages for Data Science, Accessing Databases with Python

Unit-2 Data Pre-processing and Cleaning

Importing data from various sources (CSV, Excel, SQL, Net Links), Exploring and understanding the dataset, Handling missing data: imputation techniques, Dealing with outliers and anomalies, Data transformation: normalization, standardization, Data integration and manipulation using pandas

Unit-3 Data Visualization

Data visualization using Matplotlib and Seaborn, Histograms, box plots, scattered plots, heatmap. Advanced data visualization techniques: bar plots, line plots, pie charts, etc., Interactive visualizations using Plotly, Geospatial visualization, Effective data storytelling and communication

Unit-4 Exploratory Data Analysis (EDA)

Descriptive statistics: mean, median, mode, measures of dispersion etc., Regression Analysis & Correlation Analysis.

Unit-5 Dashboard with Plotly & Dash

Dashboarding Overview, Introduction to Plotly, Introduction to Dash, Make Dashboards Interactive. Understanding the Lab Environment.

Academic integrity

Data Analytics Using Power-BI

Course Code	DPMB 03
Course Credit	3
Course	PGDM
Term	III

Introduction

This course emphasis on understanding the latest and most advanced custom visualizations in Microsoft Power BI, where students will learn to create histograms, bar charts and more. Students will be using skills as a data scientist to extract knowledge from data so they can analyze and visualize complex questions with ease.

This course would enable working with scientific data and to understand business complexities through ease of business modelling and visual analytics so that they evolve into managers for decisive decision making. Students would be able to Connect Power BI to a variety of Datasets, Drill Down and Up in Your Visualization and Calculate and Visualize Data in the Form of Various Charts, Plots, and Maps

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class-discussions, cases, and group-project. Students would have to work individually as well as in groups on the platform of Power-BI Desktop and create dashboards on varying data sets from variety of business domains. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to.

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understand and develop data analysis skills using tools like Power-BI which empower data to be converted in to visualizations in the form of dashboards for managerial decision making.
CO2	Design and develop ETL process with data modelling skills for effective data visualization enablement.
CO3	Enable to collect, examine, and present data for any purpose, so as to implement the data interpretations through dashboards in to business management decisions.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

Textbook

1. Mastering Power BI: Build Business Intelligence Applications Powered with DAX Calculations, Insightful Visualizations, Advanced BI Techniques, and Loads of Data Sources by Chandraish Sinha.
2. Power BI Data Modeling: Build Interactive Visualizations, Learn DAX, Power Query, and Develop BI Models by Nisal Mihiranga

Reference Book

Curriculum

Unit-1 Introduction to Power BI Desktop

What is Power BI? Why Power BI? Installing & Updating Power BI Desktop, How Power BI Works?

Power BI Architecture, Exploring the interface of the data model, understanding the query editor interface, importing data in different formats- csv, excel, web, visuals.

Unit-2 Working in Query Editor & Understanding the Data Model in Power BI

Query Editor: Connecting with Power BI Desktop to source files, keeping and removing rows, working with filters, removing empty rows, appending queries, working with columns, replacing values, splitting columns, merging queries.

Understanding Data Model: Understanding Schemas (Star Schema & Snowflake Schema),

Relationships among tables using primary and foreign key.

Unit-3 Data Visualization using Power BI Desktop

Basic Visual Charts – Simple Column Charts, Stacked Column Charts (Include & Exclude Options), Pie Charts, Donut Charts, Funnel Charts, Ribbon Charts, Tables, Line Charts, Line Chart with Column Chart. Using Slicers – Text Slicer, Date Slicer, Number Slicer, Time Slicer, Category Slicer, Hierarchy Slicer. Using Filters – Chart Filter, Visual Filter, Page Filter, Report Filter.

Unit-4 Map Analysis in Power BI

Different Types of Maps – Simple Map Chart, Filled Map, Pie Charts in Maps, Tree Map, Scatter Plot, Gauge Chart, Cards. Representation of Geographical Areas using Maps, Representing Variables in Map.

Unit-5 Advance Data Visualization in Power BI

Intermediate and Advance Data Visualization Charts, Transforming Disparate Data to Homogeneous Structures, Power Query Applications, Super Advance Charts, Dashboard Preparation, Publishing Reports in Power BI.

Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

International Logistics and Shipping Operations

Course Code	DPMIB 02
Course Credits	3
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction

This course is a comprehensive course designed for students to understand global logistics complexities. It focuses on critical aspects like issues in international logistics, understanding sales contracts, and in-depth exploration of forecasting models in supply chain management. This curriculum is structured to provide students with practical and theoretical knowledge essential for navigating the dynamic field of international logistics, ensuring they are well-equipped to handle the challenges and opportunities in this sector.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

CO1	To help students understand the issues in International Logistics.
CO2	To provide an understanding of Sales Contract in International Logistics.
CO3	To understand the international logistics and transportation system.

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given video lecture links of the teaching faculty to clear the doubts after the classroom.

Unit-1 Foundation Concepts in International Logistics

Managing the Supply Pipeline for Global Trade Flows, The Global Logistics Operators, Comparison between National and International Logistics, International Transport System, Globalization and International Trade Environment. Factors Driving Global Supply Chain Management, Customs and Global Supply Chain Management. Case Studies and Latest Updates

Unit-2 Export Sales Contract in International Logistics

Constituents of the Export Sales Contract, Contract of Affreightment: Terms of Delivery & Incoterms standards. International Purchasing Systems- Constituents, Strategy and its Interface with the Management of the Global Supply Chain, Negotiating the Contract, Selecting the International Logistics Operator, Criteria of Selecting the Third-Party Logistics Operator.

Unit-3 Integrating International Logistics with Supply Chain

Trade-Offs in International Logistics, Multi-Modalism, Key Factors in a Transport Mode(s) & Trade-Off. Considerations of Speed, Frequency, Packing and Insurance in International Transportation. Warehousing & Benchmarking in Global Supply Chain Management, Demand- Driven Supply Network in International Logistics.

Unit-4 International Transport Systems

Introduction to International Transport System- Basic Terms, Characteristics and Relations, Significance of Transportation Services, Characteristics of Modes of Transports -Road Transportation, Rail Transportation, Maritime Transport, Air Transport. Technical performance & Transport Economic Indicators, Maritime Routing Patterns, The Containerization of Commodities, Transcontinental Bridges.

Unit-5 Cost and Economy of International Logistics

Total Cost of Ownership (TCO), It's importance and implication; International Transport and Economic Development; Transportation and Commercial Geography; Components of International Transport Costs; International Transport Supply and Demand, Location Analysis, Market Area Analysis; The Nature of International Transport Policy; International Transport Planning, International Transport Safety and Security.

International Trade Operations & Documentation

Course Code	DPMIB 03
Course Credits	3
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction

"International Trade Operations & Documentation" is a specialized course designed to impart a fundamental understanding of export and import processes in global trade. It focuses on key aspects such as the registration process, payment terms, export costing, and pricing strategies. The course also aims to elucidate the intricacies of shipment procedures, offering a detailed interpretation of these processes. Additionally, it provides a comprehensive overview of the various documents essential in international trade, ensuring students gain practical knowledge and skills. This course is tailored for those seeking to navigate the complex landscape of international trade operations and documentation effectively.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class-discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book and any other reading material provided before they come to the class.

Programme Outcomes

After completing the PGDM Programme a student should be able to.

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Identify the process of Registration process, Payment terms, Export costing and pricing.
CO2	To promote basic understanding on the concepts of export & import in International Trade.
CO3	Interpret the process of Shipment procedures, & summarize the various documents used in international trade

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Curriculum

Unit-1 Introduction

Introduction to exports, Registration process, Selection of products and market Payment terms, Export costing and pricing, Preliminaries for exports. Registration – IEC, RCMC, EPC, Central Excise. (BCMC changed to RCMC) Categories of Export, Physical – Direct & Indirect, Deemed Exports Merchant& Manufacturer Exports

Unit-2 Trade Procedures & Documents Shipping

Shipment procedures, Role of clearing and forwarding agent, Cargo management Containerization, Shipping documents and terms used in shipping, Export Procedures Excise clearance for exports, Marine insurance of Export cargo Shipment goods, Quality and Pre Shipment inspection, EGC Services, GSP rules of origin

Unit-3 International trade documentation

Meaning and importance of letter of credit, Documentation papers of L/C EXPORT incentives, risk and insurance, Benefits of Exports, excise clearance Benefit / Rebate, Income Tax Benefit, (IPRS is discontinued), Shipment & Transport – Sea, Air, Rail, Road, Pipeline, Role of overseas agent & remittance of commission

Unit-4 International Transport Systems

The organization of exports –imports firms and business planning, planning of export/import operations. Import procedures Overview of various export promotion schemes Duty Drawback. Advance License, (Replenishment Licenses, Special Interest License is discontinued), Remission Scheme, DEPB Scheme.

Unit-5 Export Promotion

Export Promotion Capital Goods Scheme. Diamond & Jewelry, Agricultural & Pharmaceutical product exports promotion, scheme. Export of Principal Commodities in India, SEZ, EHTP, STP& EOU's, Types of Export Houses. (Free trade zones have been changed to SEZ) 3

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

AI for Entrepreneurship

Course Code	DPME 02
Course Credits	3
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction

The aim of this course is to equip students with the knowledge, skills, and strategic mindset to leverage artificial intelligence technologies in entrepreneurial ventures. The subject enables students to apply AI tools in solving common entrepreneurial challenges like market analysis, customer insights, and operational automation through practical case studies and projects.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Recall and list the fundamental concepts of Artificial Intelligence (AI) and its terminologies relevant to entrepreneurship
CO2	Explain and interpret how AI technologies are influencing modern business models, startup ecosystems, and entrepreneurial strategies in various industry sectors.
CO3	Demonstrate the application of basic AI tools and techniques to solve real-world entrepreneurial problems.

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given video lecture links of the teaching faculty to clear the doubts after the classroom.

Textbooks:

- Doug Rose (2020), Artificial Intelligence for Business: A Roadmap for Getting Started with AI, 2nd Edition, Pearson.
- Thomas H. Davenport, Rajeev Ronanki (2018), Artificial Intelligence for Managers, Harvard Business Review Press.

Reference books:

- Thomas H. Davenport (2018), The AI Advantage: How to Put the Artificial Intelligence Revolution to Work, The MIT Press.

CO and PO Mapping

3 - Highly Mapped

2 - Medium Mapped

1 - Low Mapped

	PO1	PO2	PO3	PO4	PO5
CO1	3	3	2	1	1
CO2	3	2	1	2	1
CO3	2	2	1	1	1

Curriculum

Unit-1 AI Foundation for Business Applications

Introduction to artificial intelligence and its business relevance; Key AI technologies: Machine Learning, Natural Language Processing, ethical considerations in AI adoption and implementation; case study: How startups are leveraging AI to disrupt traditional markets.

Unit-2 AI Strategy and Business Model Innovation

AI readiness assessment frameworks, Identifying AI opportunities within existing business models, AI -Driven business models and revenue streams; Competitive analysis: positioning against AI-native and AI-enhanced competitors.

Unit-3 AI Implementation and Resource Management

Building vs. Buying AI capabilities, Talent acquisition and management for AI initiatives, financial planning for AI projects: costs, ROI, and funding strategies

Unit-4 AI Product Development and Market Entry

Customer discovery for AI-powered products and services, Market entry strategies for AI Startups, Intellectual Property considerations for AI innovations.

Unit-5 AI Entrepreneurship in Practice

Building an AI-focused pitch desk for investors, future trends in AI entrepreneurship, Developing an AI-enabled business plan.

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Opportunity and Feasibility Analysis

Course Code	DPME 03
Course Credits	3
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction

The primary objective of this course is to equip participants with the essential skills and knowledge needed to assess, strategize, and execute successful business ventures. The course aims to empower individuals with the ability to navigate the complex landscape of entrepreneurship by fostering critical thinking, strategic planning, and effective communication, ultimately enabling them to create and present compelling business plans to potential investors.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork.
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	To understand the concept of startups, evaluating product, market, organizational, and financial aspects with precision.
CO2	To develop strategic business modeling expertise, analyzing diverse models and conducting thorough industry and competitor assessments.
CO3	To develop business plan proficiency and effective investor communication skills, ensuring compelling presentations for securing support and funding.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given video lecture links of the teaching faculty to clear the doubts after the classroom.

Supply Chain Network Design

Course Code	DPMS 02
Course Credits	3
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction

This Course provides an understanding of the role of distribution within a supply chain and identify factors that should be considered when designing a distribution network. The goal is to provide managers with a logical framework for selecting the appropriate distribution network given product, competitive, and market characteristics. It also identifies and discusses the various factors that influence the facility location, capacity, and market allocation decisions. It then establishes a framework and discusses various solution methodologies for network design decisions in a supply chain. It identifies sources of risk for global supply chains, discuss risk mitigation strategies, detail the methodologies used to evaluate network design decisions under uncertainty, and show how they improve global supply chain decisions.

Teaching Pedagogy

The teaching methodology will include lectures using power point, case studies, articles, group discussions and presentations. Interaction during lectures will be encouraged and therefore each student is expected to add valuable input during lectures by sharing his/her knowledge. Students will be required to work on the assignments and individual presentations.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

CO1	Understand the foundational concepts and principles of supply chain networks, emphasizing their significance in modern business operations.
CO2	Analyze the diverse factors influencing network design decisions, such as cost, service levels, and agility, to develop a holistic perspective on network management.
CO3	Identify the key factors to be considered when designing a distribution network

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given video lecture links of the teaching faculty to clear the doubts after the classroom.

CO2	3	3	3	2	3
CO3	3	2	3	2	2

Curriculum

Unit-I Introduction to Supply Chain Networks

Understanding the fundamentals of supply chain networks and their significance in modern business operations.

Overview of supply chain management, Importance of network design in supply chains, Types of supply chain networks (e.g., centralized, decentralized, hybrid), Factors influencing network design decisions (cost, service level, agility).

Unit-II Distribution Network Design in SCM

Distribution role in SCM, Factors of distribution network, Design Option, e-commerce distribution, selecting and appropriate distribution network

Unit –III Designing SCM Network

Role of Network Design, Factors of Network design decisions, Framework, Facility location strategies (e.g., centroid, weighted center methods) Greenfield & Brownfields analysis.

Unit- IV Global Supply Chain Network Design.

Globalization & SCM, Total cost decision, Risk in global SCM, Decisions under uncertainty, Onshore and Offshore.

Unit- V Sustainable and Resilient Supply Chain Networks

Sustainable practices in network design (e.g., green logistics) Resilience in supply chain networks (e.g., risk mitigation, disruption management). Technology integration for sustainable and resilient networks. Blockchain and AI in building resilient global supply chains.

Academic integrity

Inventory & Warehousing Management

Course Code	DPMS 03
Course Credits	3
Course for	PGDM
Term	III
Session duration	60 mins each session

Introduction

The course “Inventory & Warehousing Management” provides an in-depth understanding of two critical components of supply chain management, inventory control and warehousing operations. The course is designed to help students grasp the fundamental concepts and strategic importance of warehousing in the efficient movement and storage of goods. It explores various types of warehouses, their roles in value addition, and their operational advantages. Students will gain insights into warehouse functions, layout planning, storage systems, and material handling equipment essential for optimizing space, time, and cost. The course also delves into inventory management principles, emphasizing classification techniques such as ABC analysis, inventory cost analysis, and demand forecasting. Through a blend of theoretical knowledge and practical applications, students will learn how effective inventory and warehousing decisions can lead to improved supply chain performance and customer satisfaction.

Teaching Pedagogy

The course will be based on classroom lectures sessions. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book and any other reading material provided before they come to class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	To understand the basic concepts and various functions of Warehouse.
CO2	To impart knowledge on various types of warehouses and their advantages.
CO3	To Study the identification of various materials and material storage systems, material handling equipment
CO4	To impart knowledge on Inventory management and focusing towards classification of various types of Inventories.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Unit -I Inventory Management

Inventory Management- Need and functions- Stock Levels under Conditions of Certainty, Risk and Uncertainty- Cost of carrying or not holding adequate inventory- EOQ- Stock-out cost based inventory decisions- Inventory Classification: ABC, Inventory Ledger- Goods Receipt processing within bound delivery/without in bound delivery-Goods issue without bound delivery/internal consumption-Stock transfer Scenarios. Safety Stock, re-order level.

Unit -II Warehouse Functions

Meaning of Warehousing - Importance –Functions: Receiving: Logistics support for Inward Transportation, Unloading, Inspection, Acceptance and Recording; Storing: Space allocation, Facilitation to stocking, Guarding & Recording; Risk bearing-Processing-Grading and branding–Disinfecting services-Issuing: Order preparation, Picking, Dispatching/ Delivery & Recording- Handling, Transportation & Storage of ISO Containers–Utility and Advantages of warehouses-Problems and issues in receiving processes.

Unit -III Internal Operations of Warehouse

Measures and metrics of warehouse operations-Logistics in the warehouse-Localization of materials in a warehouse- Identification and classification of Materials and products in the warehouse- Managing the material/products turns in warehouse (FIFO/LIFO)–Problems and issues in shipment processes. Warehousing Equipment: Material Handling equipment and Systems Safety Matting, Industrial Safety Equipment- Storage types and storage unit management- Material Storage Systems benefits – methods-Industrial Shelving, Industrial Storage Bins - Industrial Storage Cabinets - Spill Containment Systems-Industrial Waste Disposal.

Unit- IV Warehouse Management (WM)

Warehouse documentation- Information flows in the warehouse- ERP-WMS - Bar code –RFID- Organization Data- Warehouse Structure- Warehouse Master Data - WM Material master view-Organization Data-Define Warehouse structure-Warehouse Number-Storage type-Storage section - Storage Bin – Picking Area - Storage unit – Quantity- Creating Transfer requirement automatically/manually-Creating Transfer requirement for storage. AI powers warehouse automation. Latest Technologies in Warehouse Management - Robotics, AGV, Sorters, Pick to Light and Put to Light systems.

Unit- V Warehouse Types

Own Warehouses- Hired Warehouses- Private. Warehouses- Public Warehouses- Government Warehouses- Bonded. Warehouses- Co-operative Warehouses- Distribution Warehouses- Fulfillment/ Consolidation Warehouses-Warehouses Providing Value Added. Services-Cross Docking and Trans-loading Warehouses-Break Bulk. Warehouses-Storage Warehouses-Refrigerated Warehouses-Characteristics of ideal warehouses-Warehouse Layout-Principles and Facilities-Types.

Legal Aspects of Business

Course Code	DPM401
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction:

This course is designed to understand the legal aspect of business.

Course Objective:

The objective of this course to acquaint students with general business & company related legal issues to help them become more informed, sensitive and effective business leaders, to focus on legal and statutory compliances and to develop the skills to interpret the laws and apply it to practical problems affecting the day to day operations of a business enterprise.

Curriculum

UNIT-I: Indian Contract Act

Nature and kinds of contracts, Essential elements of a valid contract, offer and acceptance, consideration, capacity to contract, free consent, legality of object and condition on Contingent contracts, performance of contract, discharge of contract, quasi contract, remedies for breach of contract

UNIT-II: Special Contracts & The sales of goods act, 1930

Indemnity and guarantee, Bailment and Pledge, Agency, General principles, conditions and warranties, doctrine of caveat emptor, transfer of ownership, sale by non-owners, performance of a contract of sale, remedial measures.

UNIT-III: Negotiable Instrument Act

The Negotiable Instrument Act, 1881; meaning and types of negotiable instrument, parties to negotiable instrument, presentment of negotiable instrument, dishonor of cheques (Sec-138), negotiation of negotiable instrument, discharge of parties, liabilities of a banker, Hundis.

UNIT-IV: The Indian Companies Act, 2013

Company and its various forms v/s other forms of business, formation of a company, memorandum of association, articles of association, prospectus, shares and share capital, company formation, general meetings and proceedings, directors.

It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalties as per policies of the Institute.

Strategic Management

Course Code	DPM402
Course Credits	1.5
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction:

This course will prepare students to think strategically in an age when companies like Apple, Google, and Microsoft have become more valuable (in market cap terms) than companies like Exxon. Today, business value and competitive advantage arise more often from consumer perceptions of what is "cool" than from physical assets or economies of scale.

Course objective:

Strategic Management helps to understand the holistic view of the organization and it also helps the students to analyze the situation from a generalist perspective. It requires a comprehensive, integrated and coordinated approach to formulate and execute effective strategies at different levels of the organization. The course throws light on strategic formulation and implementation keeping in mind market dynamics and capability of the organization.

Curriculum

UNIT-I: Introduction to Strategic Management

Concept of strategy, corporate, business and functional level strategy, Strategic management process, Vision, Mission and Objectives. Characteristics of good mission and vision statement. Core competence and its characteristics, 7S and 5M framework

UNIT-II: Strategy formulation

Ansoff Matrix, BCG Matrix–Significance in Strategy formulation, corporate level strategies: Stability, Growth and Retrenchment strategy, Combination Strategy Business Level Strategies: Cost Leadership, Differentiation, Focus Strategy, Offensive strategies, Defensive strategies and Competitive advantage

UNIT-III: Structural analysis of competitive environment

Strategic analysis and choice-Criteria for evaluating strategic alternatives, Operational and derived functional plans to implement strategy. ETOP/ CA analysis; Strategic control and operational control, techniques of strategic evaluation, External Growth strategy: Merger, Acquisition, joint Ventures, Foreign collaboration as a strategy for growth, BCG and GE Matrix

UNIT-IV: Contemporary issues

Balance score card, Porter five forces model, red ocean and blue ocean strategy. Strategies for situations like competing in emerging industries, maturing or declining industries, fragmented industries,

Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the faculty concerned.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalties as per policies of the Institute.

Learning and Development IV

Course Code	DPM403
Course Credits	1.5
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction:

The aim of this course, designed by the Learning and Development (L&D) department, is to equip PGDM students with the essential skills required for placement readiness, internship preparedness, and overall corporate readiness. This trimester-based course aims to prepare PGDM students for internships, placements, and corporate roles. It focuses on communication, building confidence, leadership, and interpersonal skills to ensure career readiness and overall professional growth.

Course Objectives

1. To assess the current level of students.
2. To give real time GD, Interview practice to the students.
3. To prepare students comprehensively for placements and future career opportunities.

Course Outcome (COs)

After the completion of the course, the student will be able to:

CO1	Understand the core competencies required for placement, internship, and corporate success, including communication, leadership, and interpersonal skills.
CO2	Apply learned strategies to real-time group discussions, interviews, and workplace scenarios to demonstrate professional readiness.
CO3	Develop skills for career enhancement

Course Content

Soft Skill & English Language Module				
Session No.	Topic	Weightage	Activity Planned	Assessment Metrics
1	Internship Impact Story -RRR (Reflect, Relate and Refine)	2 hrs.	A Day in the Life: Inside My Internship Role: Give a walk-through of a typical day, key tasks, tools used, and takeaways.	
	Self-reflection on how the internship shaped			

	their learning, insights about industry exposure, trends, practices, and the students' evolving interest in their chosen field.		Internship Case Study: Solving Real Problems with Academic Insight Highlight a real challenge faced during the internship and how the student approached it using concepts from their field.	
2	Build Resilience	1 hrs.	Story Telling	Content, English fluency, Body Language & Confidence
	Ways to build Resilience, Bounce back technique -Resilience and mental health			
3	Resume Building- II	2 hrs.	Grammar Check, Chronology improvisation and Addition of relevant data	2 Sample resume for 2 different Job Descriptions.

6	Personal Interview - III	5 hrs.	Placement Preparation STRESS Situational / Behavioral /Competency based / HR /CBD	Content, English fluency, Body Language & Confidence
	STRESS Interview			

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalties as per policies of the Institute.

Integrated Marketing Communication

Course Code	DPMM 04
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

Integrated Marketing Communication is an elective course in marketing that helps to understand the important issues when planning and evaluating marketing communications strategies and executions. It provides learning about various communication tools and its effectiveness, in such a way that fosters creative ideas from the learners for understanding and application of effective marketing communication Programme. The course aims to achieve level 3 of bloom's taxonomy (apply) at certain points in the syllabus, but the majority portion of the syllabus is enabling to achieve the blooms level 1 & 2 (remember & understand).

Teaching Pedagogy

The pedagogy for this course will combine conceptual learning with practical application to develop a comprehensive understanding of communication strategies. Classroom sessions will include lectures supported by case studies, brand campaigns, advertisements, and industry articles to illustrate how IMC works in real-world contexts. Students will be encouraged to actively participate in discussions and share their perspectives on communication practices across diverse media.

Experiential learning will be emphasized through group projects, role plays, and presentations where students design and evaluate integrated campaigns. Assignments will focus on analyzing communication strategies, media planning, and message effectiveness. Pre-class readings, case studies, and campaign reviews will prepare students to engage meaningfully in class and connect theoretical frameworks with industry practices.

Course Outcomes

After taking this course a student shall be able to.

CO1	Demonstrate concepts and key theories of marketing communications.
CO2	Interpret the role of various sales and marketing tools/promotion mix in IMC.
CO3	Understand and explain media planning & strategies.

Curriculum

UNIT- I Integrated Marketing Communication:

Meaning, Characteristics of IMC, Evolution of IMC: The role of AI in transforming marketing communications, Trends for emergence of IMC, Marketing mix and promotions analysis, Problems in implementing IMC, IMC process, Buyer behavior and IMC orientation, Role of marketing strategies, IMC tools in value creation and delivery, Marketing Communications and brand equity.

UNIT – II Establishing objectives and Budgeting:

Determining Promotional Objectives, Sales vs Communication Objectives, DAGMAR, Problems in setting objectives, setting objectives for the IMC Program. Communication process, Traditional and alternative Response Hierarchy Models, AIDA model, Integrating AI for enhanced consumer journey mapping.

UNIT- III Advertising:

Features, Role of Advertising in IMC, Advantages and Disadvantages, Types of Advertising, Types of Media used for advertising, AI's impact on advertising effectiveness. STP strategies for advertising. Advertising research, Advertising budget- methods, measuring effectiveness of advertising, Message design: Advertising copy, advertising appeal, advertising agency and its functions. Media planning, objective, process, media types and characteristics, scheduling, media strategy.

UNIT- IV Sales Promotion:

Scope, role of Sales Promotion as IMC tool: Using AI to enhance sales promotion strategies, Reasons for the growth, Advantages and Disadvantages, Types of Sales Promotion, objectives of consumer and trade promotion,

Direct Marketing - Role of direct marketing in IMC, Objectives of Direct Marketing, Components for Direct Marketing, Tools of Direct Marketing – direct mail, catalogues, direct response media, internet, telemarketing, alternative media evaluation of effectiveness of direct marketing. B2B Marketing

Course Code	DPMM 05
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

B2B Marketing is an elective course in the area of marketing that helps us to understand the business-to-business environment, important decisions while planning and execution. This course focuses on the skills students need to understand the unique needs of business customers and succeed in marketing and management roles within B2B framework. It provides learning about various communication tools and its effectiveness, in such a way that fosters creative ideas from the learners for understanding and application of decision making. The course aims to achieve level 3 of bloom's taxonomy (apply) at certain points in the syllabus, but the majority portion of the syllabus is enabling to achieve the blooms level 1 & 2 (remember & understand).

Programme Outcomes

After completing PGDM a student should be able to;

CO1	Understand Fundamentals of all functional areas of management.
CO2	Apply the management knowledge to take better decisions for various given business scenarios.
CO3	Critically analyze business problems and find right management tool to solve them
CO4	Demonstrate values, ethics, leadership and teamwork.
CO5	Higher employability quotient

PO1 Understand Fundamentals of all functional areas of management.

PO2 Apply the management knowledge to take better decisions for various given business scenarios.

PO3 Critically analyze business problems and find right management tool to solve them

PO4 Demonstrate values, ethics, leadership and teamwork.

PO5 Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

CO1	To understand and identify the opportunities in the B2B Market
CO2	To analyze customer relationship management in the B2B Market
CO3	To assess the Market in the B2B segment & understand the Strategic Market Planning for Products and Channels in B2B Market, Pricing, Communication and Branding.

Curriculum

UNIT -I Introduction to B2B Marketing:

Business marketing and Business market customers, Market structure, Environment and Characteristics of Business Marketing, Strategic role of marketing, Understanding how AI influences strategic marketing decisions, Commercial enterprises, Commercial and institutional customers.

UNIT – II Organizational Buying and Buyer Behavior:

Organizational buyers' decision process - A Stepwise Model and A Process Flow Model: Integrating AI analytics for better understanding of buyer behavior, Organizational and business markets - Government as a customer - Commercial enterprises - Commercial and institutional customers

Product and Brand Management

Course Code	DPMM 06
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

Product and brand management is an essential elective course in the marketing domain that focuses on the development and management of products and the branding strategies associated with them. It is a critical aspect of marketing that plays a significant role in the success of any business. The course aims to achieve level 2 of Bloom's taxonomy.

Teaching Pedagogy

The pedagogy for this course will combine conceptual learning with practical application. Lectures will be supplemented with case studies, industry reports, and examples to highlight the unique dynamics of B2B markets. Students will actively engage in group discussions, role plays, and presentations to develop problem-solving and decision-making skills in business contexts. Assignments and projects will focus on real-world applications such as buyer-seller relationships, channel management, and B2B communication strategies. Pre class readings and materials will ensure active participation and deeper classroom interaction.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand Fundamentals of all functional areas of management.
PO2	Apply the management knowledge to take better decisions for various given business scenarios.
PO3	Critically analyze business problems and find right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork. PO5 Higher employability quotient

Course Outcome

After taking this course a student shall be able to;

CO1	Understand product decisions and strategies.
CO2	Interpret the impact of product strategies on other marketing mix factors and vice versa.
CO3	Explain the strategies adopted by marketers for designing, developing and maintaining brands.

Curriculum

UNIT-I Product Decisions:

Product concepts, Product Life Cycle and its implications, Product development process, understanding how AI can enhance product concept development, Minimum Viable Product (MVP), Product prototypes, Product innovation, Competitive mapping and positioning, Functional support plans (FSPs), Product market fit, Product launch stage.

UNIT-II Product Management:

Product Management: The role of AI in enhancing product management practices, Product Manager

Archetypes, Product manager roles and responsibilities, transitioning to product manager from different fields, Product portfolio management, Finance and forecasting for Product manager

UNIT-III Brands & Brand Management:

Concept of Brand, Product vs. Brand, Brand Architecture, Brand Identity, Brand personality, Brand awareness and image. Strategic Brand Management Process: Introduction & Phases, Identifying & Establishing Brand Positioning, Repositioning, Criteria for Choosing Brand Elements, Options & tactics for Brand Elements, How AI influences each phase of brand management.

UNIT-IV Growing and Sustaining Brands:

Designing and Implementation: Leveraging AI in the design and execution of brand strategies, Use of IMC for Brand Building, leveraging Secondary Brand Associations to Brand building. Tenets of brand building, Brand Extensions, Managing brands over time and Geographic boundaries.

UNIT-V Brand Equity:

Concept of Brand Equity: Understanding how AI enhances the measurement and management of brand equity, Developing a Brand Equity Management System. Measuring Sources of Brand Equity and Brand Equity measurement approaches, Measuring the value of the brand, CBBE Model, Brand value chain.

Organization Development & Change Management

Course Code	DPMH 06
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

The entire course will enable the students to understand the key concepts of Organizational development and how to manage change in an organization.

Teaching Pedagogy

The teaching methodology will include emphasizes experiential learning through field projects, simulations, and flipped classroom techniques. Students actively engage with real-world challenges by working on field projects that allow them to apply theoretical concepts in practical scenarios. Simulations and case studies further immerse students in decision-making processes, enhancing their problem-solving skills. The flipped classroom model encourages independent learning, where students review content before class, enabling more interactive and application- focused sessions. Additionally, offering certifications on industry-relevant tools and technologies ensures students gain specialized skills, preparing them for dynamic business environments.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand fundamentals of all functional areas of management.
PO2	Apply the management knowledge to take better decisions for various given business scenarios.
PO3	Critically understand the business problems and find right management tool to solve them.
PO4	Demonstrate values, ethics, leadership and teamwork.
PO5	Higher employability quotient.

Course Outcomes

After taking this course a student shall be able to;

CO1	Understand the better insight into each of the Organizational development and how to incorporate change
CO2	Designing the HR Operating Models.
CO3	Analyze how to manage change in an organization and develop leadership values

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear their doubts after the classroom.

Textbooks:

- Best Practices in Organization Development and Change: Culture, Leadership, Retention, Performance Coaching (Louis Carter, David Giber, Marshall Goldsmith, Richard F. Beckhard, W. Warner Burke, Edward E. Lawler III, Beverly L. Kaye, Jay Alden Conger, John Sullivan) Human Capital Analytics: How to Harness the Potential of Your Organization's Greatest Asset

Project Finance and Financial Modeling

Course Code	DPMF 04
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

Project finance refers to a specialized funding method used to finance long-term infrastructure, industry, and other significant projects. In project finance, the financing structure is based on the project's cash flow and assets rather than the creditworthiness of the project sponsors. It involves multiple parties, such as investors, lenders, and sometimes government entities, collaborating to fund and manage a specific project. This funding method is often used for large-scale projects like building infrastructure, power plants, and public-private partnerships. Financial modeling, on the other hand, is a process of creating a mathematical representation (a model) of a real-world financial situation. It involves using historical data, assumptions, and projections to forecast future financial performance. Financial models are created using spreadsheets or specialized software and can simulate various scenarios to help in decision-making processes. The course is designed to meet the applied level of Bloom's taxonomy at specific points, but largely it is designed to meet the level of understanding and application of the taxonomy.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on financial models using excel, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Developing a strong ability to analyze financial data, interpret results, and make informed decisions.
CO2	Enhancing problem-solving skills in financial contexts, especially related to project finance, mergers, and feasibility analysis.
CO3	Being able to summarize and present complex financial data and analysis to top management or stakeholders effectively.

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Textbook

- C. Sengupta, Financial Model lingusing Excel and VBA.
- Sheeba Kapil, Financial Valuation and Modeling, Wiley.
- Simon Benninga, Financial Modeling.
- Alastair L.Day, Mastering Financial Modeling in Microsoft Excel: A Practitioners Guide to Applied Corporate Finance.

Reference Books:

- Alastair L. Day, Mastering Risk Modeling.
- Building Financial Models (Mc Graw Hill Finance & Investing).
- Financial Modeling (MIT Press).
- Financial Analysis with Microsoft Excel; Timothy R. Mayes; Cengage India.
- Mastering financial Modeling in Microsoft Excel: A Practitioners Guide. To Applied Corporate Finance

	PO1	PO2	PO3	PO4	PO5
CO1	3	2	1	-	-
CO2	2	3	3	-	3
CO3	1	3	3	2	2

Curriculum

Unit 1: Introduction to Financial Modelling

Overview of financial modelling and its applications, Types of financial models: Static vs. dynamic models, Excel essentials for financial modelling, Introduction to AI applications in financial modelling

Unit 2: Financial Statement Modelling

Understanding financial statements (Income Statement, Balance Sheet, Cash Flow Statement) Building a three-statement financial model, Forecasting financial statements using historical data, AI in financial data processing and trend identification

Unit 3: Valuation Modelling

Discounted Cash Flow (DCF) Valuation, Relative valuation methods (Comparables, Precedent Transactions), Sensitivity and scenario analysis, AI-driven predictive analytics for valuation

Unit 4: Project Finance & Risk Modelling

Introduction to project finance models, Debt and equity structuring in financial models, Risk modelling using Monte Carlo simulations, AI applications in risk management and credit assessment

Unit 5: Mergers & Acquisitions (M&A) and LBO Modelling

Overview of M&A financial modelling, Leveraged Buyout (LBO) modelling basics, Capital structure analysis and deal structuring, AI in deal evaluation and predictive M&A analysis

Academic Integrity

- a) **Plagiarism** is not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/quiz/assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your prohibited at GIMS and will invite penalty as per policies of the Institute.

Financial Risk Management and Measurement

Course Code	DPMF 05
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction:

In an increasingly volatile and complex financial environment, the ability to identify, assess, and manage financial risks is essential for sustainable business success. Organizations across sectors face a variety of financial risks, including market, credit, operational, and liquidity risks—that can significantly impact their performance and stability.

The course titled Financial Risk Management and Measurement is designed to equip students and professionals with the foundational knowledge and analytical tools necessary to understand and manage these risks effectively. The objective of the course is to provide a comprehensive overview of risk types, risk assessment methodologies, and quantitative measurement techniques, while fostering practical skills for implementing risk management strategies in real-world financial settings. The course is designed to meet the applied level of Bloom's taxonomy at specific points, but largely it is designed to meet the level of understanding and application of the taxonomy

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on financial models using excel, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcome

After taking this course a student shall be able to;

CO 1	To understand the fundamental concepts of financial risk and its types.
CO 2	To learn various methods of measuring and managing financial risks.
CO 3	To apply tools and techniques for market, credit, operational, and liquidity risk measurement.
CO 4	To develop skills for using derivative instruments for hedging risks.
CO 5	To understand risk governance, regulatory frameworks, and best practices.

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Curriculum

Unit 1: Introduction to Financial Risk Management

Definition & Importance of Financial Risk Management (FRM), Types of Financial Risks: Market, Credit, Operational, Liquidity, Legal & Reputational, Risk Management Process & Framework, Enterprise Risk Management (ERM), Role of Risk Managers & Governance Structure, Regulatory Environment: Basel Norms, SEBI, RBI Guidelines

Unit 2: Market Risk Measurement

Concept & Types of Market Risk (Equity, Interest Rate, Currency, Commodity), Value at Risk (Var): Definition, Types (Historical Simulation, Variance-Covariance, Monte Carlo Simulation), Stress Testing & Scenario Analysis, Sensitivity Measures: Duration, Convexity, Beta, Greeks (Delta, Gamma, Vega, Theta), Applications of Var in Risk Management

Unit 3: Credit Risk Measurement

Meaning & Types of Credit Risk, Credit Rating & Credit Scoring Models, Probability of Default (PD), Loss Given Default (LGD), Exposure at Default (EAD), Credit Var & Credit Metrics, Credit Derivatives: Credit Default Swaps (CDS), Collateralized Debt Obligations (CDOs), Counterparty Risk & Settlement Risk

Unit 4: Operational & Liquidity Risk Management & Risk Mitigation Techniques

Operational Risk: Causes, Measurement & Mitigation Techniques, Key Risk Indicators (KRIs) & Loss Event Data, Liquidity Risk: Sources & Measurement (Liquidity Gap Analysis, Liquidity Ratios), Liquidity Coverage Ratio (LCR) & Net Stable Funding Ratio (NSFR), Integrated Risk Management Approach, Risk Mitigation Using Derivatives: Forwards, Futures, Options, Swaps, Hedging Strategies & Examples, Risk Transfer, Risk Avoidance & Risk Retention Strategies, Basel III & Basel IV Norms – Impact on Risk Management

Unit- 5: Role of Artificial Intelligence in Risk Management

Introduction to AI and Machine Learning (ML) in finance, AI-driven risk identification and early warning systems, Predictive analytics for credit risk assessment, AI models for fraud detection and prevention, Algorithmic trading risks and AI-based controls, Challenges and ethical considerations of AI in risk management, Real-world applications and case studies of AI in financial risk management.

Academic Integrity

- a) **Plagiarism** is not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.

Investment Management and Banking

Course Code	DPMF 06
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

Investment Management and Banking is an important area of study for management graduates. The course hones the aspirants' decision-making skills regarding their personal as well as corporate investment management. The course provides learning about various sources of investments and variety of strategies to be adopted in case of investment management along with the introduction of banking systems in India. The industry scope of the course is very high as investment management is one of the key decision areas for the managers of finance. It is contemporary as it helps the organizations to not only manage their investments but also helps them in multiplying the returns on investments.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understand the basic concepts of investments management.
CO2	Detail understanding of capital market and money market.
CO3	Detail understanding of Indian Banking System.

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given video lecture links of the teaching faculty to clear the doubts after the classroom.

Textbook

- Dr. R.P.Rustagi “Investment Management- Theory and Practice”
- Prasanna Chandra “Investment Analysis and Portfolio Management”
- Yogesh Maheshwari “Investment Management”
- Dr. Satish Kumar Saha “Indian Banking System”
- Reference books:
- S. Kevin “Security Analysis and Portfolio Management”
- Donald E. Fischer, Ronald J. Jordan, A.K. Pradhan “Security Analysis and Portfolio Management”
- V.A. Avadhani “Investment Management”
- Dr. Venkatesh S. Katke “Banking System in India”

Curriculum

Unit –1. Introduction

Investment, Nature and Scope of Investment, Nature of investment management, Investment vs. Speculation, Investment Vs Gambling, Element of Investment, Objectives of Investment, Investment Avenues, Investment Process, Tax and Transaction Costs in Investment, Risk and Return analysis, Measurement of Risk, Risk Return Relationship, Time Value of Money, Sources of Financial Information.

Unit-2: Structure of Capital Market

Structure of Capital Market, Capital Market Instruments/Securities, New Issue/Primary Market, Parties involved in the New Issue, Types of issue, Types of Investors in New Issue Market, Methods of New Issue in Primary Market, Pricing of New Issues, Allotment of Shares, Secondary Market/Stock Exchanges, Stock Market Index, Trading at Stock Exchanges, Scrip Traded on Stock Exchanges, Compulsory Rolling Settlements, Listing of Securities, Security Exchange Board of India (SEBI), Role of SEBI, Capital Market Intermediaries, Depositories.

Unit- 3: Structure of Money Market

Money market, Evolution of money market in India, Types of money market, Money market objectives, Money market characteristics, Money market instruments, T-Bill, Certificate of deposits, Commercial Paper, Repurchase Agreements, Money market mutual funds, Money market structure, Regulatory framework of money markets, Participants of money markets.

Unit-4: Indian Banking System

Meaning of Banking, Evolution of banking in world, Evolution of banking in India, Structure of Banking system in India, Importance of Banking System, Major reforms in banking system in India, Concept of credit creation, practical simulations such as lab sessions, workshops and simulating games in online trading and investment

Unit-5: Banking operations and products and banking accounts

Banking operations, Payment and Remittance Services, Overdraft, Currency Exchange, Consultancy, Online Banking, Mobile Banking, Home Banking, Credit and Debit Cards, Money Transfer, Investment Banking, Wealth Management, Banking accounts

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. Type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Business Intelligence and Data Mining (BIDM)

Course Code	DPMB 04
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

This course emphasis is on understanding the application of a wide range of modern techniques to specific decision-making situations. The course covers how to identify, design and develop analytical information systems, such as Business Intelligence with a descriptive analysis on data warehouses. It also introduces cutting edge interactive data-visualization tools using data mining techniques, classification, clustering on large data sets. The course is structured to meet the apply level of bloom's taxonomy at certain points but largely it is designed to meet the level of understanding of the Data mining.

Teaching Pedagogy

Classes will involve a blend of lectures and case discussions. Students will practice various research activities, including: article reviews, presentations, experimental design, theory development, testing and application. Students are expected to contribute to the class discussions based on the course readings and their own experience.

The course will use the following pedagogical tools:

- Lectures
- Case discussion and presentations
- Projects and Assignments
- Related Videos
- Library Work
- Guest Lectures
- Projects / Assignments / Quizzes / Class Participation etc.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership and teamwork skills
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understanding the fundamentals of Business Intelligence empowers businesses to leverage data for better decision-making
CO2	Articulate data warehousing that can support decision-making processes in a business.
CO3	Understanding data mining allows businesses to extract valuable insights from large datasets for data-driven decision making.
CO4	Interpret classification and prediction methods to make accurate predictions, leading to better decision-making in various industries.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning.

Textbook

1. R.n. prasad , Seema Acharya, Fundamentals Of Business Analytics ,Wiley India Pvt Ltd

Reference Books:

1. Paulraj Ponniah , Data Warehousing Fundamentals for IT Professionals
2. Alex Berson, Stephen J.Smith, Data Warehousing, data mining & OLAP, McGraw Hill

CO1	3	1	3	-	1
CO2	2	1	3	-	-
CO3	3	2	3	-	-
CO4	2	1	2		

Course Structure

Unit-1 Understanding BI:

Describing BI, Information sources before dawn of BI,
Evolution of Business Intelligence, The Architecture of BI, Difference between ERP

Unit-2 Data Warehousing:

Data Warehousing Definitions and Concepts, Data Warehousing Process
Overview, Data Warehousing Architectures, the Extraction,
Transformation Load (ETL) Processes, Dimensional analysis, Online Analytical Processing (OLAP)

Unit-3 Data Mining:

Data Mining (DM), Fundamental Concepts, Architectural Aspects of Data
Mining, Data Mining Techniques, Association Rule Mining: Market basket analysis, Data Mining for
Marketing data and for Customer Relationship
Management, Data Mining Tools like RapidMiner and Tanagra.

Unit-4 Classification and Prediction:

What is classification and prediction? Issues regarding Classification and prediction: Classification methods:
Decision tree, Bayesian Classification, Neural Network, Prediction methods: Linear and non-linear
regression, Logistic Regression.

Unit-5 Designing ETL:

Introduction to ETL Design, Build ETL Design from ETL Architecture, Dimension Table ETL, Design ETL
for Fact Tables, Summarize ETL Design.

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. Type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

AI for Decision Making

Course Code	DPMB 05
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

This course on AI for Decision Makers explores the growing use of AI across disciplines and its potential benefits and challenges. The course covers necessary context, such as discussing what AI is, how it works, Ethical considerations, and policy considerations.

Teaching Pedagogy

A hybrid approach in which AI can be infused, at suitable levels, within cognitive academic tasks without dramatically overhauling current practices. Mix of lectures, hands-on simulations, group activities, and projects.

Course Outcomes

After taking this course a student shall be able to;

CO1	Understanding fundamentals of artificial intelligence and applications of AI in today's business world.
CO2	AI applications across industries. Understanding business problems using AI for quick decision making.
CO3	Knowing AI Ethics and Responsible AI

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership and teamwork skills
PO5	Higher employability quotient

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom (if required).

Textbook

- Artificial Intelligence: A Guide for Thinking Humans by Melanie Mitchell
- Prediction Machines: The Simple Economics of Artificial Intelligence by Ajay Agrawal, Joshua Gans, and Avi Goldfarb
- Artificial Intelligence for Managers: Leverage the power of AI, Malay A. Upadhyay, BPB Publication
- AI for Managers, Rahul De', Cengage Publication.

CO and PO Mapping

3 - High Mapping

2 - Medium Mapping

1 - Low Mapping

	PO1	PO2	PO3	PO4	PO5
CO1	3	2	1	1	3
CO2	3	3	2	1	3
CO3	1	1	--	3	--

Unit-1 : Foundations of Artificial Intelligence

- What is AI? Evolution and Impact on Business
- Types of AI: Narrow, General, Super AI
- Key Concepts: Machine Learning, Deep Learning, NLP
- Real-world examples and industry videos

Unit-2 : AI Applications across Industries

- Sectoral Applications: Retail, Healthcare, Finance, Education
- Smart assistants, chatbots, and recommendation systems
- AI in CRM, Supply Chain, HR, Marketing
- Case studies: Netflix, Amazon, and Tesla

Module 3: Understanding Machine Learning

- Basics of Machine Learning: Supervised, Unsupervised, and Reinforcement Learning
- The ML Workflow and its application in business: Data collection, model training, evaluation
- Tools: Teachable Machine, Google Sheets/Excel with AI add-ons

Module 4: Business AI Tools in Action

- Business Intelligence + AI: Power BI, Looker Studio
- Generative AI: ChatGPT, DALL·E, Synthesia
- Intro to RPA with AI: UiPath or Power Automate

Module 5: Ethics & Future of AI, Hands-on Project

- Responsible AI: Fairness, transparency, privacy, accountability
- Examples of misuse and bias in AI
- Building trustworthy AI systems
- Emerging AI trends: Autonomous systems, AI in creativity, AI + IoT
- Career roles: AI Product Manager, Data-Driven Strategist

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Data Visualization using R

Course Code	DPMB-06
Course Credit	3
Term	IV
Session duration	60 mins each session

Introduction

This course will help you draw meaningful knowledge from the data. The course cover . Single Continuous Variable, Single Discrete Variable, Two Continuous Variable, Two Variable: One Continuous, One Discrete, Two Variables. The course is structured to meet the apply level of bloom's taxonomy at certain points but largely it is designed to meet the level of understanding of the Data mining.

Teaching Pedagogy

Classes will involve a blend of lectures and case discussions. Students will practice various research activities, including: article reviews, presentations, experimental design, theory development, testing and application. Students are expected to contribute to the class discussions based on the course readings and their own experience.

The course will use the following pedagogical tools:

- Lectures
- Case discussion and presentations
- Projects and Assignments
- Related Videos
- Library Work
- Guest Lectures
- Projects / Assignments / Quizzes / Class Participation etc.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership and teamwork skills
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understanding about the importance of packages in R and how they extend the functionality of the base language.
CO2	Master the art of data visualization through comprehensive techniques, covering single and multiple variables, time series, and categorical data representation.

CO3	Excel in data visualization using ggplot2, mastering diverse plotting techniques and advanced functionalities for insightful analysis
CO4	Interpret classification and prediction methods to make accurate predictions, leading to better decision-making in various industries.
CO5	Develop hands-on proficiency in real-time projects spanning Law of Large Numbers, Financial Statement Analysis, Basketball Free Throws, and World Trends analysis

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning.

Textbook

Basics of Supply Chain Management

Course Code	DPMIB 04
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

Supply Chain Management is the backbone of any Organization. Basics of Supply Chain Management (SCM) helps in understanding the basic concepts of SCM, its objectives and importance. Basic of SCM guides students the core functions of SCM like Sourcing Management, Inventory Management, Importance of Transport etc. Most of the organizations are working on various ERPs in which SAP is used by most of the Organizations. This subject is also covering the Introduction of SAP MM Module to help to learn Organization Structure in SAP. Organization structure and Master data are very important for any ERP. This course will give the overview of basics of SCM and SAP and will help students to know how SCM works in any Industry.

Teaching Pedagogy

The teaching methodology will include lectures using power point, case studies, articles, group discussions and presentations. Interaction during lectures will be encouraged and therefore each student is expected to add valuable inputs during lectures by sharing his/her knowledge. Students will be required to work on the assignments and individual presentations.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	To understand the concept of Basics of Supply Chain Management (SCM).
CO2	To understand the core functions of SCM of any organization.
CO3	To understand the working methodology of SCM and the importance of ERP (SAP) in most of the organizations.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

Text Books:

- Chopra, Sunil, Meindl, Peter and Kalra, D. V.; Supply Chain Management: Strategy, Planning and Operation; Pearson Education.
- Sahay, B.S.; Supply Chain Management; Macmillan

Curriculum

Unit-1 Introduction of Supply Chain

Supply Chain Management, Objective of SCM, Importance of SCM, Key Issues in SCM.

Unit-2 Sourcing Management

Sourcing Management, Sourcing/Procurement Vs Purchase, Purchase Requisition (PR), Request for Quotation (RFQ), Quotation Analysis, Contract and Purchase Order

Unit-3 Inventory Management

Need and functions, Goods Receipt Note, EOQ, Min-Max Level, reorder Level, Inventory Classification: ABC, VED and FSN Methods of Inventory Issue.

Unit-4 Transportation Management

The role of transportation in Supply Chain, Modes of Transportation and their performance, Characteristics, Transportation infrastructure and policies.

Unit-5 Introduction of SAP MM Module

Organization Structure in SAP, SAP MM Module, Material Master in SAP, Key Transaction Codes (T-Codes) and Movement Types.

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable in GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Maritime Logistics and Documentation

Course Code	DPMIB 05
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction:

The entire course will introduce the students with maritime logistics, insurance choice of shipping services and documentations.

Teaching Pedagogy

This pedagogical approach combines theoretical knowledge with practical application, promotes critical thinking, and ensures that students are well-prepared to excel in the field of maritime logistics and documentation. The course will be based on classroom lectures, exercise based on class discussions, case studied.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork.
PO5	Higher employability quotient

Course Outcomes:

After taking this course a student shall be able to;

CO1	Gain a working knowledge of ship operations, port management, supply services and the chartering process.
CO2	Understand vessel types and design over view including loading and discharge.
CO3	Identify the essential elements of documentation associated with maritime trade.
CO4	Understand the documentation & functioning of export and import management.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning.

Textbooks:

- Edmund J. Gubbins, Shipping Industry (Transportation Studies) Rutledge, 1986.
- Martin Stopford, Maritime Economics, Rutledge, 2008.
- Alan E.Branch, Elements of Shipping, Rutledge, 2007.

Reference Books:

- Peter Lorange, Shipping Strategy: Innovating for Success, Rutledge, 2007.
- Lane C.Kendall, the Business of Shipping, Cornell Maritime Press, 2001

World Trade Organization & Regional Trading Blocks

Course Code	DPMIB 06
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

Almost all of the entire world trade covering both goods and services comes under the rules of WTO; even though, there are disagreements on the specific provisions and on the future expansions of the WTO coverage. Thus, any discussion on economic development and policy making must take into cognizance the WTO framework of international trade. While the WTO framework of international trade has been the best trade agreement the world ever had in terms of transparency, rule-based system, nondiscrimination, enforceability etc., not all trade issues and disagreements have been resolved under the WTO system.

Teaching Pedagogy

The teaching methodology will include lectures using power point, case studies, articles, group discussions and presentations. Interaction during lectures will be encouraged and therefore each student is expected to add valuable inputs during lectures by sharing his/her knowledge.

Students will be required to work on the assignments and individual presentations.

Programme Outcomes

After completing PGDM Programme a student should be able to.

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business Scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

- **CO1:** To understand the importance of regional Grouping economics.
- **CO2:** To understand the trade policies and its outcomes.
- **CO3:** To understand the functions organizations that facilitate international trades

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Legal Structures in Entrepreneurship and Start Up

Course Code	DPME 04
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

The goal of this course is to inspire students and help them imbibe an entrepreneurial mind-set. This course examines areas of the law that impact the entrepreneurs in the process of starting, growing, operating and financing a business. This course is intended to enable the students acquire a general understanding of some essential laws and develop sufficient understanding so that they appreciate their relevance for business management. The course is intended to provide a basic introduction to the legal and regulatory constructions that impact a start-up business.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class-discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to.

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

CO1	To be able to identify distinguished legal issues & its classification in start-ups and entrepreneurship.
CO2	To develop an understanding of mercantile laws to govern the business enterprises.
CO3	To identify legal issues that arise in the context of selecting an entity for a new venture and build the knowledge about different forms of protection for Idea and Innovation.
CO4	To demonstrate critical thinking skills to become future-oriented decision makers, problem solvers and innovators.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Business Models in New Age

Course Code	DPME 06
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

The business landscape is undergoing rapid transformation due to digitalization, innovation, and disruptive technologies. This course introduces students to modern and evolving business models that differ significantly from traditional frameworks. Students will learn how innovative business models contribute to scalability, competitive advantage, and customer-centric value creation.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class-discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

CO1	To recall and define the key concepts, terminologies, and components related to traditional and emerging business models in the digital era.
CO2	To be able to explain and differentiate various new-age business models.
CO3	To apply the knowledge of business model frameworks to develop innovative and viable business ideas suited for the current digital and entrepreneurial landscape.

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Sourcing and Vendor Management

Course Code	DPMS 04
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

This course of sourcing & vendor management gives an insight into how purchases and vendor relationships affect the entire organization and deliver bottom line improvement through a much greater understanding of Sourcing and Vendor Management. Sourcing has always stood on the boundary of the firm, looking outside, and scanning the environment for new opportunities and threats. When dealing with suppliers, sub-optimization must be prevented because it is very tempting to make price the central issue in negotiations. Strategic purchasing and supply management is more than just negotiating a deal with suppliers. It is about managing supplier relationships in such a way that suppliers actively support the company's overall business strategy and value proposition. It is about fostering a climate where suppliers are challenged to continuously improve their performance and add value to the organization.

The course will provide an understanding about how integrating suppliers into the company's overall business processes will help boost productivity. It is about developing the physical and information infrastructure to enable these new ways of working.

Teaching Pedagogy

The teaching methodology will include lectures using power point, case studies, articles, group discussions and presentations. Interaction during lectures will be encouraged and therefore each student is expected to add valuable input during lectures by sharing his/her knowledge. Students will be required to work on the assignments and individual presentations.

Programme Outcomes

After completing PGDM Programme a student should be able to.

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

- **CO1:** To understand fundamentals of Sourcing, purchasing and materials management.
- **CO2:** To understand various procurement models for different product categories.
- **CO3:** To identify key elements of vendor management.
- **CO4:** To understand the different supplier contracts in sourcing management.

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Aggregate Planning and Supply Chain

Course Code	DPMS 05
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

The course aims at the aggregate planning methodology used to make decisions about production, outsourcing, inventory, and backlogs in a supply chain. We identify the information required to produce an aggregate plan and outline the basic trade-offs that must be made to create an optimal aggregate plan. We also describe how to formulate and solve an aggregate planning problem using Microsoft Excel. We also discuss how demand may be managed to counter predictable variability using price and promotion. By managing supply and demand together, managers can maximize the overall profitability of a supply chain.

Teaching Pedagogy

The teaching methodology will include lectures using power point, case studies, articles, group discussions and presentations. Interaction during lectures will be encouraged and therefore each student is expected to add valuable input during lectures by sharing his/her knowledge.

Students will be required to work on the assignments and individual presentations.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

CO1:	To Identify the decisions that are best solved by aggregate planning. Describe the information needed to produce an aggregate plan.
CO2:	To understand the information needed to produce an aggregate plan and explain the basic trade-offs to consider when creating an aggregate plan.
CO3:	To Learn how to manage supply and demand to improve synchronization in a supply chain in the face of predictable variability.

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Curriculum

Unit: I Introduction to Aggregate Planning.

- The Role of Aggregate Planning in supply chain. The Aggregate Planning Problem.
- Information needed for an Aggregate Plan.
- Outputs of Aggregate Plan.

Unit: II Aggregate Planning Strategies:

- Chase strategy—using capacity as the lever:
- Flexibility strategy—using utilization as the lever:
- Level strategy—using inventory as the lever:
- The Role of IT in Aggregate Planning, Implementing Aggregate Planning in Practice.

Unit: III Aggregate Planning using excel.

- The goal of aggregate planning is to maximize profit.
- Use of Linear Programming in Aggregate Planning.
- How to set up excel solver and use it.
- How to generate the aggregate plan in excel.

Unit: IV Variability in Supply Chain Management.

- Understanding Predictable variability in supply chain.
- How to respond to Predictable variability in supply chain.
- How to manage supply.
- How to manage demand

Unit: V Forecasting Demand in Supply Chain using Excel and AI

- Understating what forecasting is and its role in supply chain management.
- Solving forecasting problem in excel using different methods such as weighted average, exponential smoothing, FITS Time series

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Supply Chain Analytics using AI

Course Code	DPMS 06
Course Credits	3
Course for	PGDM
Term	IV
Session duration	60 mins each session

Introduction

The course “Supply Chain Analytics Using AI” is designed to bridge the gap between traditional supply chain management practices and the growing application of data-driven decision-making powered by artificial intelligence. This course introduces students to various supply chain optimization techniques, with a focus on mathematical modelling, algorithmic thinking, and linear programming approaches relevant to real-world logistics and operational challenges. Students will gain hands-on exposure to tools such as Excel Solver and AI-driven analytical frameworks, learning how to formulate and solve complex problems in procurement, inventory management, transportation, and network design. Emphasizing both conceptual understanding and practical application, the course aims to equip students with the analytical competencies required to support strategic decisions in dynamic and technology-driven supply chain environments.

Teaching Pedagogy

The teaching methodology will include lectures using power point, case studies, articles, group discussions and presentations. Interaction during lectures will be encouraged and therefore each student is expected to add valuable input during lectures by sharing his/her knowledge. This is a hands-on course. Students will use spreadsheets extensively to apply these techniques and approaches in case studies drawn from actual supply chains.

Students will be required to work on the assignments and individual presentations.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business Scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

- CO1: To understand the different supply chain optimization techniques
- CO2: To understand the concept of Modelling and its use in Supply chain.
- CO3: To understand the use of Linear Programming techniques to support decision-making processes in supply chain management using advance methods such as Excel Solver and AI.

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Curriculum

Unit: I Introduction to Supply Chain Analytics.

Introduction to Modelling. Using Analytic Solver Platform, Steps in implementing an LP Model in Spreadsheet, Using Excel Built in Solver, Make Vs buy Decision Problem. Linear programming and sensitivity analysis- Supply Chain Modelling

Unit: II Facility Location and allocation Optimization

Understanding the importance of Facility location. Optimization of facility location. Practical problem

Unit: III Transportation and Vehicle Routing Problem (VRP)

What do we mean by "optimal routes" for a VRP? Find optimal routes for multiple vehicles visiting a set of locations, Determining the optimal solution to VRP. Transportation Problem

Unit: IV Transshipment problem

Introduction to Transshipment problem, Understanding supply & demand in Transshipment, Route capacities or route minimums, unacceptable routes. Practical Problem of Transshipment

Unit: V Non-linear programming

Introduction to non-linear programming. Introductions to Inventory models. Inventory Models practical problem

Entrepreneurship

Course Code	DPM501
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

The objectives of this course are to inspire students and help them imbibe an entrepreneurial mind-set. The students will learn what entrepreneurship is and how it has impacted the world and their country. They will be introduced to key traits and the DNA of an entrepreneur and be given an opportunity to assess their own strengths and identify gaps that need to be addressed to become a successful entrepreneur.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class-discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing the PGDM Programme a student should be able to.

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

CO1	To be familiarized students with the fundamentals of entrepreneurship and its role in economic development and to motivate them towards entrepreneurial activities.
CO2	To understand the concept of entrepreneurial leadership and stimulate them to think innovative as entrepreneurs.
CO3	To write effective business plans for establishing and managing any business venture.
CO4	To know how to skills among students to raise the funding for the business from different sources & legal and regulatory framework in India.

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with video lecture links of the teaching faculty to clear the doubts after the classroom.

Textbooks:

	PO1	PO2	PO3	PO4	PO5
CO1	3	2	1	1	1
CO2	3	2	2	2	1
CO3	2	2	1	2	1

Course Structure

Unit-1 Introduction:

Concept of Entrepreneurship; Role of entrepreneurship in economic development; Factors impacting emergence of entrepreneurship; Managerial vs. entrepreneurial approach; Types of entrepreneurs; Characteristic of successful entrepreneurs; Entrepreneurship process; Women entrepreneurs; Social entrepreneurship; Entrepreneurial challenges.

Unit-2 Entrepreneurship Development and Leadership:

Types of startups; Entrepreneurial class theories; Entrepreneurial training; EDP programmes; Characteristics of entrepreneurial leadership, Components of entrepreneurial leadership; Entrepreneurial challenges; Source of innovative ideas; Entrepreneurship and creativity; Techniques for generating ideas.

Unit-3 New Venture Planning:

Methods to initiate ventures; Franchising- how a franchise works, franchising law, evaluating of franchising opportunities; Developing a marketing plan- customer analysis, steps in marketing research; Marketing mix; Business plan-benefits of drivers, perspectives in business plan preparation, elements of a business plan; Business plan failures.

Unit-4 Financing Venture:

Financing stages; Sources of finance; Venture capital; Criteria for evaluating new venture proposals; Evaluating Venture Capital- process; Sources of financing for Indian entrepreneurs.

Unit-5 Special Issues for Entrepreneurs:

Legal issues – Forming business entity, considerations and criteria, requirements for formation of a Private/Public Limited Company, intellectual property protection- patents, trademarks and copyrights – importance for startups, legal acts governing business in India; Opportunities and challenges; Intrapreneurship.

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalties as per policies of the Institute.

Project Management & Evaluation

Course Code	DPM502
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction:

The entire course will introduce the students with basic concept of Project management and develop critical thinking and analytical decision-making capabilities to investigate complex business problems to propose project-based solutions.

Teaching Pedagogy

The course will be based on classroom lectures through power point. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand fundamentals of all functional areas of management.
PO2	Apply management knowledge to take better decisions for various given business scenarios.
PO3	Critically understand the business problems and find the right management tool to solve them.
PO4	Demonstrate values, ethics, leadership and teamwork.
PO5	Higher Employability quotient.

Course Objective:

After taking this course a student shall be able to;

CO1	To acquaint students with project management method
CO2	To develop skills in planning, analysis, implementation and control.
CO3	Application of Project management techniques in business organization and Succession Management

Textbooks:

- Prasanna Chandra. Project planning analysis and selection implementation and Review.
- Tata Mc Graw Hill Publication Co. Ltd. Latest Edition.
- Vasant Desai–Project Management–Himalaya Publishing House.

Reference Books:

- Bhavesh M. Patel– Project Management–Vikas Publishing House.
- K.R. Sharma– Project Management–National Publishing House.
- H.P.S. Pahwa– Project Reports and Appraisals–Bharat Law House.

Curriculum

UNIT-I: Project Management

Meaning of Project Management; Concept and need of Project Management; Types of Projects; Project Life Cycle and its phases; Tools and techniques of Project Management.

UNIT-II: Project Planning and Phases

Project Planning and Phases: Need and Importance; Phases of capital budgeting; Project analysis facts; Generation and Screening of Project ideas.

UNIT-III: Project Analysis and Selection

Project Analysis: Market and demand analysis (Including demand forecasting); Technical Analysis and Financial Analysis (Cost of Project, working capital requirement and its financing) Project Selection: Project Cash Flow; Time value of money; Cost of Capital and Analysis of Risk; Network techniques for Project Management (PERT and CPM Model).

UNIT-IV: Project Review

Project Review: Need for review; Initial Review; Performance Evaluation; Evaluating the capital budgeting system; Economic life of Projects.

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Learning and Development V

Course Code	DPM503
Course Credits	1.5
Course for	PGDM
Term	II
Session duration	60 mins each session

Introduction:

The aim of this course, designed by the Learning and Development (L&D) department, is to equip PGDM students with the essential skills required for placement readiness, internship preparedness, and overall corporate readiness. This trimester-based course aims to prepare PGDM students for internships, placements, and corporate roles. It focuses on communication, building confidence, leadership, and interpersonal skills to ensure career readiness and overall professional growth

Course Objective

- To assess the current level of students.
- To give a real time GD, Interview practice to the students.
- To prepare students comprehensively for placements and future career opportunities.

Course Outcomes

After the completion of the course, the student will be able to:

CO No.	Description of the Course Outcome
CO1	Understand the core competencies required for placement, internship, and corporate success, including communication, leadership, and interpersonal skills.
CO2	Apply learned strategies to real-time group discussions, interviews, and workplace scenarios to demonstrate professional readiness.
CO3	Develop skills for career enhancement

Course Content

Soft Skill & English Language Module				
Session No.	Topic	Weightage	Activity Planned	Assessment Metrics
1	Conflict Resolution Skills	5 Hours	Class Discussion; Situation Analysis	Content, English fluency, Body Language & Confidence
	What is Conflict Resolution? - The fundamentals of conflict resolution -Tips for managing and resolving conflict -Core skills and characteristics of Conflict Resolution			
2	Elevators Pitch / Introduction	5 Hours	Personal Introduction	Content, English fluency, Body

	First impressions, Developing rapport			Language & Confidence
3	Group Discussion-IV	10 Hours	Group Discussion	Content, English fluency, Body Language & Confidence, Managerial Skills
4	PI Preparation -IV	10 hrs	Placement Preparation STRESS Situational / Behavioral /Competency based / HR /CBD	Content, English fluency, Body Language & Confidence

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

AI in Marketing

Course Code	DPMM 07
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction:

This course provides an in-depth understanding of the role of Artificial Intelligence (AI) in modern marketing practices. It explores how AI technologies are transforming customer engagement, decision-making, personalization, and overall marketing strategy. Designed for future-ready marketers, the course equips students with foundational knowledge of AI and its practical applications across various marketing functions. While a significant portion of the syllabus addresses Bloom's levels 1 and 2 (remember & understand), select modules are designed to reach level 3 (apply), enabling students to analyse case scenarios and experiment with real-world AI tools.

Course Outcomes (COs)

After taking this course a student shall be able to;

CO1	Understand the evolving marketing landscape and the strategic role of AI.
CO2	Comprehend and communicate AI/ML concepts applicable to marketing.
CO3	Analyze marketing problems to apply AI solutions for better decision making.

Curriculum

UNIT-I Understanding the New Marketing Landscape:

Introduction to AI in marketing, challenges of modern marketing, shift from supply-driven to demand-driven models, importance of personalization and AI in customer journeys, role of big tech (Amazon, Google, Netflix, etc.), overview of AI-enhanced customer relationship moments.

UNIT-II AI and Machine Learning Fundamentals for Marketers:

Networks vs nodes: Business model implications, key concepts in AI and ML: definitions and differences, types of machine learning, analytics and data-driven decision making, vocabulary for communicating with data science teams

UNIT-III The AI Marketing Canvas – Stages 1 & 2:

Overview of the AI marketing canvas framework, stage 1: foundation, building digital infrastructure, first-party data collection, initial use cases; stage 2: experimentation, agile experiments with vendor tools, quick wins and learning loop.

UNIT-IV The AI Marketing Canvas – Stages 3 to 5:

Stage 3: expansion, building in-house capabilities, budget justification and scaling, stage 4: transformation, AI integration across marketing functions, organizational realignment stage 5: monetization, platform thinking and new revenue streams, case study: starbucks journey across all stages.

UNIT- V Change Management and Implementation:

Managing organizational change (kotler's 8-step model), culture, people, process, and profit alignment, diagnostic tools for readiness assessment, getting started: practical steps and action plan, ethical considerations and future of AI in marketing.

Textbooks:

- Venkatesan, R., & Lecinski, J. (2021). The AI marketing canvas: A five-stage road map to implementing artificial intelligence in marketing. Stanford Business Books.

Reference Books:

- Sterne, J. (2017). Artificial intelligence for marketing: Practical applications. Wiley.
- Gentsch, P. (2018). AI in marketing, sales and service: How marketers without a data science degree can use AI, big data and bots. Palgrave Macmillan.
- Choudhury, M. D. (2020). Artificial Intelligence in Marketing: Practical Applications. McGraw Hill Education.

Strategic Marketing

Course Code	DPMM 08
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

This course will help the students to understand the strategic need and relevance of strategic marketing as a management function. The course will equip students with required understanding of formulation and implementation of marketing strategies in business. The course is designed to meet the level of understanding, identifying, explaining and up to some extent demonstrating in the Bloom's taxonomy.

Teaching Pedagogy

The pedagogy for this course will integrate conceptual frameworks with real-world strategic applications. Lectures will be supported by case studies, industry reports, and contemporary articles to illustrate competitive positioning, market entry, and long-term strategy development. Students will engage in group discussions, simulations, and presentations to critically analyze business scenarios and propose strategic marketing solutions. Assignments and projects will focus on applying strategic models to real organizations, enabling students to link theory with practice. Pre-class readings and case materials will prepare students for active participation, fostering analytical thinking and decision-making skills.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand Fundamentals of all functional areas of management.
PO2	Apply the management knowledge to take better decisions for various given business scenarios.
PO3	Critically analyze business problems and find right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork.
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understand and discuss fundamentals of strategic marketing and its functions.
CO2	Demonstrate strategic implications of marketing mix elements in overall marketing decisions.
CO3	Identify and explain contemporary marketing trends, issues, challenges and solutions.

Curriculum

UNIT- I Introduction to Marketing Strategy:

Introduction to strategy, strategic concepts and strategic levels, Alternate marketing strategies- generic and specific, the role of AI in shaping marketing strategies. Strategy and marketing planning process, Understanding marketing as strategy. Ubiquity of marketing functions, Marketing organization,

Consultative marketing, Product-marketing definition and analysis, Strategic implications of marketing decisions.

UNIT- II Marketing Strategy and concept of Value:

Marketing strategy formulation, customer and stakeholder analysis, competitor analysis, Strategy selection, adjustment or re- confirmation. Creating profit opportunities, Customer Value, value proposition and value network, AI's role in enhancing customer value through personalization. Understanding strategic relevance of market segmentation, positioning maps, value curve.

UNIT- III Marketing Strategy and Marketing Mix:

Strategic application of marketing mix, Product and packaging strategy, pricing strategy, positioning and branding strategy, marketing communication strategy, distribution, selling and customer strategy. Channel migration strategies; Brand proliferation and extension, brand rationalization process, brand portfolio audit, top-down and bottoms-up segmentation approach: Using AI to enhance segmentation effectiveness.

UNIT- IV Strategic approach to Market:

The market driving firm, Understanding AI's role in driving market innovation, four orientations to market place, the role of corporate center, search for marketing synergies, leverage product platforms, emerging markets as growth platforms, customer focused strategy map. Marketing strategy and business model integration.

UNIT- V Competitive Advantage and Disruptive Marketing:

Competitive advantage: Understanding how AI can create and sustain competitive advantages, Creating and maintaining sustainable competitive advantage, challenging, contemporary marketing strategies - meme marketing, Contextual marketing, Moment marketing, content marketing.

Competitor's competitive advantage, Market driving transformation process, Disruptive Marketing, Initiating and handling disruptive marketing strategies.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice regularly to augment classroom learning. Students will also be given the video lecture links of the teaching faculty to clear their doubts after the classroom.

Services Marketing

Course Code	DPMM 09
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

Services Marketing is an important elective course in the area of marketing that helps students to understand the skills necessary to apply marketing concepts and principles to the special opportunities and challenges of services marketing in order to increase customer value. This subject will cover the concepts, attitudes, techniques and approaches required for effective understanding and applying decision making in the areas of service marketing. The course aims to achieve level 3 of bloom's taxonomy (apply) at certain points in the syllabus but the majority portion of the syllabus is enabling to achieve the blooms level 1 & 2 (remember & understand).

Teaching Pedagogy

The pedagogy for this course will emphasize both theoretical concepts and practical applications of marketing in the service sector. Classroom learning will include lectures, case studies, industry examples, and discussions on service quality, customer experience, and relationship management. Students will engage in role plays, group projects, and presentations to analyze real-world service strategies across industries such as banking, hospitality, healthcare, and retail.

Assignments and projects will focus on problem-solving and the design of innovative service marketing strategies. Pre-class readings, case materials, and multimedia resources will prepare students to actively participate in discussions and apply concepts to practical business contexts.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand Fundamentals of all functional areas of management.
PO2	Apply the management knowledge to take better decisions for various given business scenarios.
PO3	Critically analyze business problems and find right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork.
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understand the concept of services marketing to make an effective STP decision making.
CO2	Identify & translate services mix in planning and delivery of customer value.
CO3	Understand and Apply service's marketing related strategies.

Curriculum

Unit –I Introduction to Services Marketing:

Introduction, to Service Industry –Nature of Services, Characteristics of Services, Classification of Services – Importance of Services Marketing - The Growth in Services – Global & Indian Scenarios, the transformative role of AI in the service sector. Distinctive, Four I concept in services, services vs. product, Services Marketing Mix: Understanding the 7 P's, Strategies for Services Marketing.

Unit –II Understanding Consumer Behavior:

Understanding Consumer Behavior: Services vis-a-vis goods, Consumer Behavior in Services, Customer Expectations and Perceptions of Services – Evaluation of services. New Service Development Process – Basic service to potential service, Customer Defined Service Standards: Using AI to define and meet customer expectations, Demand and Capacity Management.

UNIT III Service design and delivery:

Service Development Design & Standards, service blueprinting, service distribution management, Pricing of Services: Pricing Considerations and Strategies, Revenue Management, Delivering Services: Role of Employees, Customers & Intermediaries and understanding how AI can contribute for its enhancement.

Unit –IV Managing Service Performance:

Role of CRM, the Gaps Model of Service Quality. SERVQUAL, Managing Service Promise, Integrated services communication Mix: Role of Advertising, Personal Selling, Sales Promotion, Publicity and Public Relations. Evaluating Success of Service Offering: Service quality and measurement, Complaint handling, Recovery management, Service Guarantees: Using AI to analyze and enhance service guarantee offerings.

Unit –V Overview of Current Trends in Service Industries:

Understanding of Current Trends in Service Industries: Financial, Hospitality, Health, Telecom, Consultancy, Logistics, Education, NGO, Public Utilities, ITES (IT enabled Services), Travel & Tourism, e-Services and Professional Services. Role of technology-AI, GenAI, Service Robots in service industry, Analyzing the transformative effects of AI, generative AI, and service robots in the service industry.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice regularly to augment classroom learning. Students will also be given the video lecture links of the teaching faculty to clear their doubts after the classroom.

Academic integrity

- a. **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b. **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Competency Mapping and Assessment

Course Code	DPMH 07
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction:

The entire course will enable the students to develop competency maps, distinguish between traits, skill and competence and discover the professional applications of competency mapping in a business context.

Teaching Pedagogy

The teaching methodology will include emphasizing experiential learning through field projects, simulations, and flipped classroom techniques. Students actively engage with real-world challenges by working on field projects that allow them to apply theoretical concepts in practical scenarios. Simulations and case studies further immerse students in decision-making processes, enhancing their problem-solving skills. The flipped classroom model encourages independent learning, where students review content before class, enabling more interactive and application- focused sessions. Additionally, offering certifications on industry-relevant tools and technologies ensures students gain specialized skills, preparing them for dynamic business environments.

Programme Outcomes

After completing PGDM Programme a student should be able to.

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Students will explore history, evolution, and definitions of competency, learning various competency mapping approaches and their application through case studies.
CO2	Students will learn to link HR processes to organizational strategy through competency frameworks, including models like the Iceberg and KIPP Leadership, and practice developing competency maps.
CO3	Students will understand the importance of promoting a competency culture, apply competencies in modern organizations, and use competency maps for selection, performance management, and training.
CO4	Students will develop and implement competency models, such as the Lancaster Model, and integrate them into HR processes through competency mapping, assessment, and development.

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear their doubts after the classroom.

Strategic HRM

Course Code	DPMH 08
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction:

The entire course will enable the students to understand the strategic role of specific HR systems and identify the relationship of HR strategy with overall corporate strategy.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Students will explore the origins and frameworks of strategic HRM, develop and implement HR strategies, and leverage SHRM to enhance organizational capability and competitive advantage.
CO2	Students will master competency frameworks to align HR processes with organizational strategy and develop effective HR competencies.
CO3	Students will examine the role of HR in strategy formulation and integration, addressing HRIS, legal and ethical issues, cultural change, competency management, and organizational restructuring.
CO4	Students will explore contemporary issues in SHRM, including its impact on organizational culture, mergers and acquisitions, strategic international HRM, and technological trends.

Readings

The following books are referred to for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear their doubts after the classroom.

Financial Aspects of Merger and Acquisitions

Course Code	DPMF 07
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

The course will enable the students to develop understanding of the economic activity of M&A taking place in the global economy. The course is designed to meet the applied level of Bloom's taxonomy at specific points, but largely it is designed to meet the level of understanding and application of the taxonomy.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on financial derivatives using excel, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business Scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understanding M&A Strategies
CO2	Valuation Techniques
CO3	Due Diligence and Risk Assessment

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

Financial Derivatives

Course Code	DPMF 09
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

Financial derivatives are financial instruments whose value is derived from the value of an underlying asset, index, or rate. A course in financial derivatives focuses on understanding these instruments and their applications in financial markets. It equips learners with the knowledge and skills necessary to analyze, value, and manage derivative products effectively. The course is designed to meet the applied level of Bloom's taxonomy at specific points, but largely it is designed to meet the level of understanding and application of the taxonomy.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on financial derivatives using excel, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to.

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business Scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

CO1	Ability to examine the future market.
CO2	Develop and implement comprehensive derivative trading strategies
CO3	Capacity to identify the binomial model and black Scholes model and their implementations.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

CO2	2	3	3	-	3
CO3	1	3	3	2	2

Curriculum

UNIT-I: Introduction to Derivatives Management:

Meaning of Derivatives, Characteristics, Types of Derivatives, Derivatives Market in India, Functions of the Derivatives Market, Traders in the Derivatives Market, AI in Derivatives Market: Role of AI in derivative pricing, automated trading strategies, AI-driven risk management, and sentiment analysis in market prediction.

UNIT-II: Forward Contract: Forward Contract:

Meaning, Classification, Advantages & Disadvantages, Valuation of Forward Contract, Pricing Forward Contract, Hedging with Forward Contract, AI in Forward Contracts: AI-based predictive analytics for forward pricing, algorithmic hedging strategies, and AI-driven risk assessment for forward contracts.

UNIT-III: Future Contract: Future Contracts:

Meaning & Nature, Types, Mechanics of Future Contract, Difference Between Future & Forward Contracts, Advantages and Risks of Trading in Futures Over Cash, Characteristics of the Future Market in India, Settlement of Future Position, Participants in the Future Market, Hedging Strategies Using Futures, Process of Hedging Through Future Hedge Ratio, AI in Futures Trading: AI-driven trading bots for futures contracts, deep learning models for price movement predictions, and AI-powered risk assessment tools.

UNIT-IV: Options:

Meaning of Options, Types of Options, Options Contracts, Options Trading & Differences Between Futures and Options, Market Participants & Motivations, Option Pricing Models, Options-Based Investment Strategies: Bullish, Bearish, Straddle, Strangle, Butterfly, AI in Options Trading: AI-based option pricing models, machine learning algorithms for implied volatility forecasting, and AI-driven trading strategies for options markets.

UNIT-V: Swaps:

Meaning & Types, Interest Rate Swap, Currency Swap, Valuation & Mechanism of Operation, Credit, Risk & Swap, Financial Swaps: Interest Rate & Currency Swaps, Swap Pricing, AI in Swap Markets: AI-driven pricing of swaps, automated risk assessment for swap contracts, and machine learning in credit risk evaluation.

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. The type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Data Analytics Using Tableau

Course Code	DPMB 07
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

This course tries to emphasize the practical real-world applications of data analytics skills in helping solve problems in organizations through systemized data handling using tools like Tableau. Students would be able to bridge the gaps of understanding of data handling using data exploration, data visualization and insight discovery. The course emphasizes the concepts of diverse visualizations from basic charts to development of interactive data dashboards. It provides compelling data driven dashboard building strategies for effective user interaction and data interpretation of data analysis for business implementations.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class-discussions, cases, and group projects. Students would have to work individually as well as in groups on the platform of Power-BI Desktop and create dashboards on varying data sets from a variety of business domains. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing the PGDM Programme a student should be able to:

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find the right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to.

CO1	Understand and develop practical real-world applications of skills required for data handling and data analysis through CRISP-DM methodology of data science.
CO2	Design and develop data exploration and gain insights into business through creation of data dashboards by understanding ETL and modelling skills
CO3	Enable to collect, examine, and present data for any purpose, to implement the data interpretations through dashboards into business management decisions.

Readings

The following books are being referred to on the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given video lecture links of the teaching faculty to clear the doubts after the classroom.

Textbook

1. Tableau 10 for Beginners Version 10.x Written by Chandraish Sinha, Publisher Createspace Independent Pub
2. Tableau 9: Official Guide, Me Garw Hill. By George Peck, 1 st Edition

Reference Book

Tableau documentation by Microsoft: <https://help.tableau.com/current/pro/desktop/en-us/gettingstartedoverview.htm>

CO and PO Mapping

- 3 - Highly Mapped
- 2 - Medium Mapped
- 1 - Low Mapping

	PO1	PO2	PO3	PO4	PO5
CO1	1	2	2	2	3
CO2	2	1	2	2	3
CO3	1	2	2	3	2

Curriculum

Unit-1 Introduction: Visual Analytics with Tableau

- The Importance of Visual Analytics
- The Tableau Product Suite
- Introduction to Tableau Desktop
- Data Visualization Using Tableau Desktop

Unit-2 Data Preparation: Using Tableau Desktop

- Connecting to a Data Source
- Various Joins in Tableau
- Data Transformation in the Data Pane
- Concept of Logical and Physical Table
- Append and Merge
- Understanding of CRISP-DM as a Data science methodology

Unit-3 Introduction to fundamentals of Basic Visual Analytics

- Visual Analytics
- Basic Charts: Bar Chart, Line Chart, and Pie Chart
- Hierarchies
- Data Granularity
- Highlighting
- Sorting
- Filtering
- Grouping
- Sets

Unit-4 Advanced Reporting Features in Tableau

- Slicing & Filtering Data
- Configuring Worksheet Filters
- Configuring Timelines Filters with Date Filters
- Apply Advanced Filter Options
- Create Interactive Filters

Unit-5 Saving, Publishing, and Sharing Data

- Save Data Sources
- Publish Data Sources and Visualizations Share Workbooks for Collaboration
- Dashboard Creation (Project Execution) presentations and oral viva

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. Type and extent of penalty will be at the discretion of the concerned faculty
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Predictive Analytics and Modeling with Python / R

Course Code	DPMB 08
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

The course emphasizes the importance of artificial intelligence in today's time. It tries to explore the importance of applications of AI in management domain. The course provides a comprehensive curriculum for an introduction to predictive modelling using AI. It introduces to the theoretical concepts of AI modelling and thereafter the practical applications of implementing these algorithms into Python programming. By following this structure and incorporating practical examples and exercises, the course can provide students with a solid foundation in predictive modelling and its applications in various domains.

Teaching Pedagogy

The course will be based on Classroom lectures, Exercises based on class-discussions, cases, and group-project. Students would have to work individually as well as in groups on the platform of Power-BI Desktop and create dashboards on varying data sets from variety of business domains. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understand and develop practical real-world applications of skills in AI and its application in businesses.
CO2	Design and develop AI modelling techniques using algorithms: supervised and unsupervised
CO3	Enable to collect, examine, and present data with the implementation of AI/predictive modelling algorithms through Python libraries.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

Text Book

- Machine Learning Cookbook with Python by Rehan Guha

CO and PO Mapping

3 - Highly Mapping

2 - Medium Mapping

1 - Low Mapping

	PO1	PO2	PO3	PO4	PO5
CO1	1	2	2	2	3
CO2	2	1	2	2	3
CO3	1	2	2	3	2

Course Structure

Unit-I Introduction to Predictive Modelling

- Introduction-History of Predictive Modelling
- Cases Study Discussions on applications of Predictive Modelling
- Scope of Predictive Modelling in Business Domains
- Introduction to CRISP DM

Data types, sources and structures

Unit-II Introduction to Data Sets in Predictive Modelling:

- Predictor Variable
- Training Dataset, Testing Dataset

Discussions on applications of predictive Modelling:

- Face recognition
- IBM Watson Text Analytics
- Social Media Analytics

Unit-III Discussions on applications of predictive Modelling:

- Social Media Analytics
- CRM
- NLP

Unit-IV Introduction to Modelling

- Modeling Methods - Prediction - Linear Regression
- Case Study - Excel - Linear Regression
- Modeling Methods - Classification - Logistic Regression
- B2B Churn Case Study
- Modeling Methods - Classification - Decision Trees
- Attrition Case Study
- Data wrangling practice

Unit-V Unsupervised Learning:

- Modeling Methods - Unsupervised - Clustering
- Customer Segmentation Case Study
- Modeling Methods - Unsupervised - Association Rules
- Market Basket Case Study

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. Type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Emerging Technologies for Managers

Course Code	DPMB 09
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

In today's rapidly evolving digital landscape, emerging technologies are reshaping industries, societies, and the global economy. This course will lay a foundational understanding of various current technologies, their practical applications, and their transformative potential across various sectors. This course is equipped with knowledge of cutting-edge tools and trends with the insight needed to evaluate, adopt, and lead in technology-driven environments.

Teaching Pedagogy

Integrating emerging technologies into education through a hybrid approach allows enhanced learning experiences without overhauling existing pedagogical frameworks. This method combines digital innovations, fostering a more engaging and personalized learning environment. By thoughtfully integrating emerging technologies into hybrid learning models, it creates dynamic, inclusive, and effective learning environments that cater to the diverse needs of students.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After completing PGDM Programme a student should be able to;

CO1	Acquire conceptual knowledge about various Information technology- related domains along with their pros and cons
CO2	Interpret current and future career perspectives of the existing IT domain
CO3	Evaluate the innovation that emerging technologies can bring about and to explain the trends in Data analytics

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

Textbook

1. Designing for Emerging Technologies: UX for Genomics, Robotics, and the Internet of Things: Follett, J. , O'Reilly Media
2. Emerging Technologies for Emerging Markets: Vong, J., & Song, I., Springer Singapore.
3. Disruption: Emerging Technologies and the Future of Work, Del Rosal, V., Emtechub
4. Emerging Internet-Based Technologies: Sadiku, M. N. O, CRC Press.
5. Emerging Exponential Technologies – A Management Perspective: Dr. D.G. Kulkarni and Dr. Prayag Gokhale, Himalaya Publishing House Pvt. Ltd.
6. Emerging Technologies for Effective Management, Rahul Dubey, Cengage

Curriculum

Unit-1 Big Data

Introduction, 5 v's of Big Data, Hadoop, Components of Hadoop, HDFS, YARN, Spark, Components of Spark, Hadoop vs Spark

Unit-2 Cloud Computing

Definition, Characteristics, History and Evolution of cloud, Key Cloud service providers Cloud Computing models, overview of Service Models, IaaS, SaaS, PaaS Components of Cloud Computing, Cloud Storage and Content Delivery Networks Basics of Cloud Storage, File Storage, Block Storage, Object Storage- Tiers and API

Unit-3 Blockchain

Introduction, Block chain structure, Features of blockchain, Types of Blockchain Ethereum Blockchain, Smart Contracts, Ethereum Structure, Cryptocurrenc

Unit-4 Cyber Security

Introduction, Types of Cyber Attack, Cyber Attack Countermeasures, Applications of Cyber Security
Cryptography and its Techniques, its types, Cryptography Algorithms

Unit-5 Internet of Things (IoT)

Introduction of IoT, Features, advantages and Disadvantages IoT Devices, Sensors, Microcontrollers

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. Type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute

Thrust Product & Thrust Market

Course Code	DPMIB 07
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

Introduction: To boost up India's export, the Ministry of Commerce and Industry, Government of India re-introduced a concept of Thrust Product and Thrust Market in the Foreign Trade Policy (2015-2020). Earlier the concept was known as Focused Product, Focused Market and Market Linked Focused Product scheme. The trade scenario and dynamics in India is different for different products, natural – climatic conditions intertwined with Government's policies has an enormous impact which affects the trade performance. This course is designed to analyze and understand the thrust products and markets and understand the domestic scenario. This course will be informative and useful for the students of International Business who wish to join Export – Import firms or, have entrepreneurial plans in the export sector. The pedagogy in use will be discussions, followed by presentations by students. The guest lectures will be delivered by practitioners in different Export Promotion Councils.

Teaching Pedagogy

The teaching methodology will include lectures using power point, case studies, articles, group discussions and presentations. Interaction during lectures will be encouraged and therefore each student is expected to add valuable inputs during lectures by sharing his/her knowledge.

Students will be required to work on the assignments and individual presentations.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

- **CO1:** To understand the concept of thrust products and thrust markets.
- **CO2:** To understand the assistance provided by different organizations to boost Export-Import business.
- **CO3:** To identify role of export of different commodities in global trade.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

Text Books:

- Export Import Management by Justin Paul and Rajiv Aserkar, 8th edition, Oxford Publishers.(referred as JP in the Course Outline)

Reference Books:

- Global Trade in the new millennium by Swami Dr. Parthasarathy from Biztantra Publication
- WTO, INDIA and EMERGING AREAS edited by P. Rameshan from Excel Books.
- A study of World Trade Organization by K. R Gupta from Atlantic Publishers and Distributors.
- Journal of the IIFT on WTO.

Curriculum

Unit-1 Introduction to Thrust Product and Thrust Market

Concept of Thrust Product & Thrust Market with ITC (HS) codes, provisions in the FTP, Roles of Export Promotion Councils and Commodity Boards. Domestic scenario (manufacturing/sourcing), export potential, export analysis & import analysis – framework. Digital Thrust as a Part of Technology Innovation at global level

Unit-2 Indian Exports commodities Part I

Overview of global market, Apparel exports, Leather products, Engineering goods& Electronics export.

Unit-3 Indian Exports commodities Part II

Service exports from India, Export of Agro Commodities – Coffee, Tea, Rubber, and Tobacco & Spices, Export of Petroleum and Chemical products

Unit-4 Indian Exports of Principal Commodities

Handicrafts export, Gems & Jewellery export, Pharmaceutical exports, Toys export, defense etc.

Unit-5 Indian Thrust Markets

India as Manufacturing Hub for International Market, India's Main export partners, India's trade with UAE, US, China, Singapore etc. Strategy for Doubling export. Growth and direction of Indian export.

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable at GIMS and will invite penalty. Type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

International Marketing

Course Code	DPMIB 08
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

International marketing is the application of marketing principles by industries in one or more than one country. It is possible for companies to conduct business in almost any country around the world, thanks to the advances in international marketing. The procedure of planning and executing the rates, promotion and distribution of products and services is the same worldwide. In recent times, companies are not restricted to their national borders, but are open for international marketing. With the increasing change in customers' demands, choices, preferences and tastes, the economies are expanding and giving way to more competitive marketing. Thus, organizations need to respond rapidly to the demands of the customers with well-defined marketing strategies.

Teaching Pedagogy

The teaching methodology will include lectures using power point, case studies, articles, group discussions and presentations. Interaction during lectures will be encouraged and therefore each student is expected to add valuable inputs during lectures by sharing his/her knowledge.

Students will be required to work on the assignments and individual presentations.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

- **CO1:** To understand the with the concept and issues of international marketing.
- **CO2:** To analyze the foreign market environment and develop international marketing strategies for a business firm.
- **CO3:** To understand international promotion, advertising, pricing and distribution channels.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

Curriculum

Unit-1 Introduction to International Marketing & Scanning International Marketing Environment

An overview, The concept of International Marketing, Definition and evolution of marketing technology (MarTech). understanding Globalization, Terms in International Marketing, Domestic Marketing Vs International marketing, Evolutionary Process of Global Marketing, LOCAL Marketing, EPRG Concept. Scanning the international Environment, Political, Social, Cultural and legal environment on international marketing decisions. Reasons for Entering International Markets. International Marketing Research.

Unit-2 Entering International Markets

Concept of International Market Entry, Modes of Entry in International Markets, Production in Home country and in Foreign Country, Investment in Entry Mode-International Joint Ventures, wholly owned Subsidiaries, contract manufacturing, Exporting, licensing.

Unit-3 Segmenting, Targeting and Positioning International Market & International Product and Branding

International market segmentation strategies (i.e. country-based; consumer-based), apply criteria for targeting markets, how gain competitive advantage through positioning. Review the dimensions of product adaption/standardization, international product life cycle, look at the debate about standardization vs. adaptation of products for international markets, country of origin (COO) aspects, product and branding strategies in international markets

Unit-4 International Pricing, Global Placement and Distribution Channel.

Understand the various dimensions of pricing, discuss export pricing strategies, outlining factors determine pricing, learn how to manage price escalation, learn how to manage currency risk, outline the different terms of sales, understand transfer pricing and their importance in international marketing. Outline factors influencing distribution decisions, outline direct and indirect export options and pro and cons of each, outline criteria for selecting distributor, managing international distribution channels, and show the importance of export regulations and enforcement.

Unit-5 International Promotion and Advertising.

Outline the steps to plan a promotional strategy, show how to budget a promotional strategy, understand what is a media strategy, show the various legal restrictions related to ad/promotion, present ways to overcome such legal restrictions, measure the effectiveness of an advertising campaign, understand the AIDA concept and usage for promotion, present the Customer Response Index (CRI), present some international promotional blunders

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable in GIMS and will invite penalty. Type and extent of penalty will be at the discretion of the concerned faculty.

Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

India's Foreign Trade

Course Code	DPMIB 09
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

This course focuses on foreign trade practices in India. To enhance the knowledge of the student in the area of the foreign trade, the course will discuss about the current foreign trade in India. It will also focus on the aspect of logistics, cargo and finance. Finally trade policies will be discussed in the course.

Teaching Pedagogy

The teaching methodology will include lectures using power point, case studies, articles, group discussions and presentations. Interaction during lectures will be encouraged and therefore each student is expected to add valuable inputs during lectures by sharing his/her knowledge.

Students will be required to work on the assignments and individual presentations.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

- **CO1:** To Understand broad based knowledge of foreign trade practices in India.
- **CO2:** To Understand foreign trade finance, logistics and cargo.
- **CO3:** To understand foreign trade policies and strategies.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

Curriculum

Unit-1 Introduction

Current scenario of India's Foreign trade; trade analysis & Contribution of exports to country's GDP (since Independence to mid-1970's, 70's to Liberalization & post-liberalization); Key products/commodities for export & import; Major trading partners. Steps involved in setting up an international trading firm; Indian Trade Classification based on Harmonized System of Coding (ITC-HS Codes)

Unit-2 Export Organization & Promotion Boards

Key organizations involved in India's foreign trade (name, locations/branches, key functions): Ministry of Commerce, Department of Revenue, DGFT, ECGC, EPCs, Commodity boards, EXIM bank of India, Export Inspection Council, FIEO, ITPO, DGCIS, MMTC.

Unit-3 Foreign Trade Logistics & Cargo Insurance

–Logistics Introduction to global logistics. Different modes of shipments. Different modes of operation of shipping. Different modes of transport. Multi modal transport system. Chartering practice. Containerization FCL / LCL, CFS, ICD. Third party logistic service providers. CHA, FFA, C&FA, Ship operating agent, NVOCC. Cargo Insurance Introduction to need and importance of marine insurance. Basic principles of insurance applicable to cargo clause A, B & C.

Unit-4 Pre & Post Shipment

Finance for Export and Import- Finance options for Export-Import business- pre shipment and post- shipment, effect of Foreign Exchange fluctuations on export/import pricing. Institutional Assistance for Export and Import & Export-Import Business Plan & Strategy; Export Strategy Formulation; Import Strategy (Sourcing Strategy).

Unit-5 Foreign Trade Policy

Govt. objective under Foreign Trade Policy. Structure of Import Policy. ITC (HS) classification of Imports. General policy provisions regarding Imports and exports. Duty exemption / Remission Scheme. EPCG scheme. SEZ, 100% EOU's, EHTP, STP, SEZ, FTZ etc. Exports Deemed. General provisions related to exports & imports. Current Foreign Trade Policy, Brief on SCOMET Policy

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable in GIMS and will invite penalty. Type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Entrepreneurial Marketing

Course Code	DPME 07
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

To develop frameworks and conceptual tools for students to explore new venture, opportunities, understand the business model of startups, analyze problems to develop the optimal marketing strategy for products and services in a digital-first world. The main objective of the course is to provide a fundamental understanding of the underlying dimensions of creating, measuring, analyzing and managing the marketing function in a new business venture. The course will help the students to become familiar with the concept of an entrepreneurial firm working from a marketing perspective.

Teaching Pedagogy

The course will be based on Class room lectures, Exercises based on class-discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	To understand the basic concepts and components of entrepreneurial marketing.
CO2	To analyze the various forms of entrepreneurial marketing and formulation of various marketing strategies.
CO3	To develop an understanding of entrepreneurial distribution channels for product branding.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

Identifying and Evaluating Market Opportunities (including SWOT Analysis), Understanding customers/competitors, Segmentation, Target and Positioning, Developing new product/services, Entrepreneurial pricing.

Unit-4 Entrepreneurial Distribution Channel:

Introduction to distribution channel, Decisions and supply chain management, Entrepreneurial Promotions and Viral Marketing, Web Presence Options.

Unit-5 EM for Hiring:

Marketing and raising capital (financing); Building strong and sustainable brand.

Academic integrity

- a) **Plagiarism** is the use of or presentation of ideas, works that are not one's own and which are not common knowledge, without granting credit to the originator. Plagiarism is unacceptable in GIMS and will invite penalty. Type and extent of penalty will be at the discretion of the concerned faculty.
- b) **Cheating** means using written, verbal or electronic sources of aid during an examination/ quiz/ assignment or providing such assistance to other students (except in cases where it is expressly permitted by the faculty). It also includes providing false data or references/list of sources which either do not exist or have not been used, having another individual write your paper or assignment or purchasing a paper for one's own submission. Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute.

Entrepreneurial Finance

Course Code	DPME 08
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

The course is designed to develop an understanding of the dynamic challenges faced by entrepreneurial ventures and start-ups in securing finance at different stages of growth. Entrepreneurial Finance is primarily designed for students who plan to get involved with a new venture at some point in their career as a founder, early employee, advisor or investor. However, the course is also appropriate for students interested in gaining a broader view of the financing landscape for young firms, going beyond the basics of venture capital and angel financing to look at venture debt, bank finance, corporate venture capital and receivables financing.

Teaching Pedagogy

The course will be based on Class room lectures, Exercises based on class-discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	To analyze a firm's working capital management and explain its relation to growth
CO2	To determine the amount and source of external capital for an entrepreneurial firm, including venture capital, angel financing, venture debt, crowdfunding, as well as traditional funding sources such as bank loans.
CO3	To understand the computation of various investment decisions and analyze its implications on startups.
CO4	To describe liquidity choices for private firms, and the timing of exit decisions.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

International Entrepreneurship

Course Code	DPME 09
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

This course aims to give students the knowledge and skills to understand the relationship between international business, entrepreneurship and innovation, both in nascent and established companies. Students gain insights into how entrepreneurial ventures operate and grow across borders, preparing them for global opportunities.

Teaching Pedagogy

The course will be based on Class room lectures, Exercises based on class-discussions, cases, and group-project. Students would have to work individually as well as in groups. Students are expected to read the relevant chapters from the book, relevant videos from the suggested channel and any other reading material provided before they come to the class.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	To identify and recall fundamental concepts, terminology, and theories related to international entrepreneurship
CO2	To explain and interpret the factors influencing the success of entrepreneurial ventures in the international context
CO3	To apply appropriate internationalization strategies and tools to analyze and develop business plans for entrepreneurial ventures aiming to enter or expand in global markets.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

Maritime Logistics and Documentation

Course Code	DPMS 07
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction:

This course is designed to provide students with a comprehensive understanding of maritime logistics and its integral role in global supply chain operations. It delves into the core areas of shipping operations, port and terminal management, maritime insurance, vessel types, cargo handling, and the end-to-end documentation required for international trade. The curriculum offers insights into the strategic choice of shipping services, chartering arrangements, and the regulatory frameworks governing sea freight movement. Special emphasis is placed on export-import documentation, bills of lading, letters of credit, marine insurance, and the coordination required among multiple stakeholders such as freight forwarders, customs agents, and shipping lines. By bridging theoretical concepts with practical applications, the course equips students to understand, evaluate, and manage maritime operations effectively in both domestic and international contexts.

Teaching Pedagogy

This pedagogical approach combines theoretical knowledge with practical application, promotes critical thinking, and ensures that students are well-prepared to excel in the field of maritime logistics and documentation. The course will be based on class room lectures, exercise based on class discussions, case studied.

Programme Outcomes

After completing PGDM a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate values, ethics, leadership and teamwork.
PO5	Higher employability quotient

Course Outcomes:

After taking this course a student shall be able to;

CO1	Gain a working knowledge of ship operations, port management, supply services and the chartering process.
CO2	Understand vessel types and design over view including loading and discharge.
CO3	Identify the essential elements of documentation associated with maritime trade.
CO4	Understand the documentation & functioning of export and import management.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning.

Text Books:

Cheating is strictly prohibited at GIMS and will invite penalty as per policies of the Institute

Transportation and Revenue Management in Supply Chain

Course Code	DPMS 08
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

This course we discuss the role of transportation within a supply chain and identify trade-offs that need to be considered when making transportation decisions. Our goal is to enable managers to make transportation strategy and design, planning, and operational decisions with an understanding of all the important pros and cons of their choices. Given that most supply chain assets are fixed but demand fluctuates, the matching of supply and demand is a constant challenge. We will discuss how managers may use pricing as a lever to better match supply and demand and grow revenue derived from supply chain assets.

Teaching Pedagogy

The teaching methodology will include lectures using power point, case studies, articles, group discussions and presentations. Interaction during lectures will be encouraged and therefore each student is expected to add valuable inputs during lectures by sharing his/her knowledge.

Students will be required to work on the assignments and individual presentations.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	To Understand the role of transportation in a supply chain.
CO2	To Identify the relative strengths and weaknesses of various transportation modes and network design options
CO3	To Understand the role of revenue management in a supply chain.
CO4	To identify conditions under which revenue management tactics can be effective.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

Operations and Supply Chain Management Consulting

Course Code	DPMS 09
Course Credits	3
Course for	PGDM
Term	V
Session duration	60 mins each session

Introduction

Operations and Supply Chain Management Consulting is a specialized elective designed for second-year PGDM students aiming to develop advisory capabilities in improving business operations and supply chain performance. The course bridges theoretical knowledge with real-world consulting practices, equipping students with the mindset, frameworks, and tools necessary to diagnose operational inefficiencies, craft data-driven solutions, and support strategic decision-making for client organizations. With a strong focus on experiential learning, the course simulates consulting engagements and builds the essential competencies required for careers in operations advisory, supply chain transformation, and business process optimization.

Teaching Pedagogy

The teaching methodology will include lectures using power point, case studies, articles, group discussions and presentations. Interaction during lectures will be encouraged and therefore each student is expected to add valuable inputs during lectures by sharing his/her knowledge.

Students will be required to work on the assignments and individual presentations.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business Scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

PO1	To equip students with structured consulting methodologies for solving complex operations and supply chain challenges
PO2	To develop students' abilities to analyze, interpret, and present actionable insights using industry-recognized consulting tools.
PO3	To develop students' abilities to analyze, interpret, and present actionable insights using
PO4	To provide practical exposure that reflect real-world client consulting scenarios in Operations and Supply Chain.

Readings

The following books are being referred for the course. However, it is expected that the participants will make use of other materials which will be prescribed from time to time. Students are advised to read newspapers and business magazines of their choice on a regular basis to augment the classroom learning. Students will also be given with the video lecture links of the teaching faculty to clear the doubts after the classroom.

	PO1	PO2	PO3	PO4	PO5
CO1	3	2	2	-	3
CO2	3	2	2		3
CO3	3	2	2	-	3

Curriculum

Unit-I Introduction to Operations and Supply Chain Consulting

This unit introduces the role of operations and supply chain consultants within the broader management consulting industry. It explores the scope of consulting engagements, the economics of consulting firms, and when and why organizations seek external advisory support. Students will learn about client expectations, ethical considerations, and the various types of consulting assignments undertaken in manufacturing, services, and logistics environments. Real-life consulting examples and industry practices will be discussed to build contextual understanding.

Unit-II The Consulting Process and Diagnostic Tools

This unit covers the end-to-end consulting process, from client entry to implementation support. Students will learn how to define problems, design data gathering plans, and apply structured frameworks for analysis and solution development. Emphasis will be placed on logical structuring, hypothesis-driven thinking, stakeholder interviews, and storytelling in consulting. The unit also introduces key diagnostic tools such as SWOT, root cause analysis, fishbone diagrams, and hypothesis trees, which are commonly used in consulting engagements.

Unit-III Operations Strategy and Business Process Reengineering (BPR)

Focusing on operations strategy and reengineering, this unit explores how consultants assess and realign operational processes to drive business value. It covers the principles of Business Process Reengineering (BPR), process mapping techniques, lean and six sigma methodologies, and capacity planning strategies. Students will analyze case studies to understand how reengineering is executed in practice and how operational excellence is achieved through systematic redesign of workflows and resource allocation.

Unit-IV Supply Chain Performance Improvement through Consulting

This unit emphasizes how consultants identify inefficiencies and improve performance in client supply chains. Students will learn to conduct supply chain diagnostics using frameworks like the SCOR model, assess key performance indicators, and apply tools such as value stream mapping and total landed cost analysis. The unit covers advisory roles in network design, procurement transformation, and inventory optimization. It also includes technology readiness assessments and client-specific recommendations for digital enablers such as ERP, WMS, and RFID.

Unit-V Emerging Trends

The final unit exposes students to emerging trends shaping the consulting landscape, such as AI in operations, sustainability in supply chains, and digital transformation advisory. Students will be introduced to visualization and modeling tools like Power BI and Excel Solver. The course concludes with a project where students work in teams to solve a simulated or real client problem, applying the entire consulting lifecycle from scoping to solution presentation in a competitive, feedback-driven environment.

Academic integrity

Universal Human Values and Professional Ethics

Course Code	DPM601
Course Credits	3
Course for	PGDM
Term	VI
Session duration	60 mins each session

Introduction

This introductory course input is intended to help the students appreciate the essential complementarity between 'Values' and Skills' to ensure sustained happiness and prosperity which are the core aspirations of all human beings. This course is intended to provide a much-needed orientational input in value education to the young enquiring minds. The course is structured to meet the apply level of bloom's taxonomy at certain points but largely it is designed to meet the level of understanding of the universal human values.

Programme Outcomes

After completing PGDM Programme a student should be able to;

PO1	Understand fundamentals of all functional areas of management
PO2	Apply the management knowledge to take better decisions for various given business Scenarios
PO3	Critically understand the business problems and find right management tool to solve them
PO4	Demonstrate leadership, values, ethics and teamwork
PO5	Higher employability quotient

Course Outcomes

After taking this course a student shall be able to;

CO1	Understand basic of value education, start exploring themselves.
CO2	Understand that all physical facility is required in a limited time, they become aware of activities of 'self' and 'I' and Harmony in the Family and society
CO3	Understanding of Harmony on Professional Ethics
