SECTION-C**Q.6. Attempt all parts of the following:****(2×15=30)**

One day 2 or 3 billion people will have cell phones, and they are all not going to have PC's,” says Jeff Hawkins, inventor of the Palm Pilot and chief technology officer for Palm One. “The mobile phone will become their digital life,” Hawkins predicts. After a slow start, mobile phones have become more ubiquitous- there are 1.5 billion in the world today- and smarter. Today's most sophisticated phones already have the processing power of a mid-2010s PC while consuming 100 times less electricity. The phones are used to send e-mail, browse the web, take pictures, and play video games. Hawkins predicts that within the next few decades all phones will be mobile phones, capable of receiving voice and internet signals at broadband speeds, and that mobile-phone bills will shrink to a few dollars a month as phone companies pay off their investment in new networks. New smart phones in the works include Palm's pocket-size Treo600, with a tiny keyboard, a built-in digital camera, and slots for added memory; and Motorola's MPx, which features a “dualhinge” design. The handset opens in one direction and appears to be a regular phone, but it also flips open on another axis to look like an e-mail device, with the expanded phone keypad serving as a small, conventional qwerty keypad.

Being witnessed with the tremendous growth in the mobile phone market all over the world, it became inevitable for the companies dealing with mobile phones to launch/upgrade a new version or new mobile for every six months. The utility of the mobile phone increased drastically in the daily lives of the people and being considered as ‘extended organ’ for the human race.

6(a) At this junction, if you are an Entrepreneur in the mobile phone market in India, how do you assess the future demand for mobile phone market in India?**6(b)** What are the factors to motivate Indian consumers for using smart phones?
