(b) What is the main difference between classification and clustering? Explain with example

Q.4. (a) How does cloud computing benefits Business?

OR

(b) Explain the threats that AI poses?

Q.5. (a). Elaborate the stages in the life cycle of a natural language processing (NLP) project?

OR

(b) Explain the main component of the IOT framework?

SECTION-C

Q.6. Attempt all parts of the following:

(2×15=30)

Quiznos Targets Customers for its Sandwiches

Quiznos, a franchised, quick-service restaurant, implemented a location-based mobile targeting campaign that targeted the tech-savvy and busy consumers of Portland, Oregon. It made use of Sense Networks' platform, which analyzed the location trails of mobile users over detailed time periods and built anonymous profiles based on the behavioral attributes of shopping habits.

With the application of predictive analytics on the user profiles, Quiznos employed location based behavioral targeting to narrow the characteristics of users who are most likely to eat at a quick-service restaurant. Its advertising campaign ran for 2 months- November and December, 2012- and targeted only potential customers who had been to quick-service restaurants over the past 30 days, within a 3-mile radius of Quiznos, and between the ages of 18 and 34. It used relevant mobile advertisements of local coupons based on the customer's location. The campaign resulted in over 3.7 million new customers and had a 20 percent increase in coupon redemptions within the Portland area.

6(a) How can location-based analytics help retailers in targeting customers?

6(b) Research similar applications of location-based analytics in the retail domain.
