GNIOT Institute of Management Studies – PGDM (Batch 2022-24)
(TRIMESTER – III) END TERM EXAMINATION, APRIL– 2023
PRINCIPLES OF LOGISTIC AND SUPPLY CHAIN MANAGEMENT

[Time: 2 Hours 30 Minutes]

[Maximum Marks: 100]

INSTRUCTIONS:

- (i) There are **THREE** sections in this question paper.
- (ii) Attempt questions from each section as per the directions.
- (iii) Make suitable assumptions wherever necessary.

SECTION-A

(Short Answer Type Questions, do not exceed 100 words)

Q.1. Write short notes on the following:

(10×3=30)

- (a) What is reverse logistics.
- (b) Explain reverse supply chain.
- (c) What do you mean by third party logistics?
- (d) What is global logistics.
- (e) Define fourth party logistics.
- (f) What do you mean by channels of distribution?
- (g) Define economic order quantity.
- (h) Why safety inventory is essential?
- (i) Over stocking cost maybe detrimental. Define.
- (j) Explain the term e-logistics.
- (j) What is JIT purchasing?

SECTION-B

(Long Answer Type Questions)

Attempt all questions of the following:

(4×10=40)

Q2. (a) What do you mean by logistics? What are the features of logistics management?

OR

(b) Discuss the growing importance of logistics in India.

Q3. (a) What is integrated logistics management? Why it is essential in the area of global competitiveness?

OR

(b) Supply chain management is simply the extension of logistic functions with other participants like vendors, customers and third party logistics service providers. Discuss.

Q4. (a) Explain the dimensions of supply chain management.

OR

(b) Discuss the main steps under logistic system analysis.

Q5. (a) Do you feel that there is great value of information in supply chain management. Discuss it with suitable example.

OR

(b) Discuss the key drivers of supply chain management.

SECTION-C

Q.6. Attempt all parts of the following:

(2×15=30)

The dabbawallas of Mumbai are a unique case in logistics. Nearly stacked dabbas (tiffins or lunch boxes) are a common sight at most of the railway station, late every morning in Mumbai, India. A man who is illiterate/semi-literate delivers hot lunch at the doorstep of the subscriber. It is an error free system and there are virtually no mismatches. The Mumbai tiffin boxes supplier association is a 38 year old organisation with 4500 members and a huge, loyal customer base. Their customer-base includes office goers, students, shopkeepers, etc. Instead of carrying their own lunch at an early hour in the morning, they prefer to subscribe to the dabba service. For a small fee, the dabbawalla picks up the freshly packed lunch from the subscriber's house and deliver it to his/her office at lunchtime. Once lunch is over, the empty dabba is again collected by the dabbawalla. This is done with the help of Mumbai's extremely efficient railway called the Mumbai locals. There are special train known as dabbawalla specials. The dabba's change many hand and are loaded and off-loaded in many train before their final delivery.

There is a scientific method of putting an identification mark on each dabba. Each dabba lid is marked with a particular code. The code format is a particular code. The code format is "DBOF" where D denotes the dabbawalla's number (assigned by the association), BO is a combination indicating the building/office and F is the floor number of that building where the tiffin box has to be delivered. The lid is also marked with the number denoting the railway station where the box has to be off-loaded, followed by an alphabet indicating the station where it is to be picked up. Can you imagine what the fee for all this is? the service charge varies depending on the customer's location and the distance covered.

This service was started by Parsi Banker when he employed a carrier to fetch his lunch every afternoon. The idea caught on and this inspired many unemployed people to become dabba carriers.

Soon, each dabbawalla had a handful of customers. To ensure that each carrier would only in particular district and didn't interfere with other dabbawallas, a union called the "Mumbai tiffin box carrier association" was formed in 1968. Today there are more than 5000 semi-literate dabbawallas who transport 1,75,000 boxes in a 3 hour period, traversing 25 km using public transportation. Involving multiple transfer points. In 1998, Forbes global magazine conducted an analysis of the service and gave the dabbawallas a six sigma efficiency rating

6(a) Define the input, process and output of Mumbai's dabbawalla's.

6(b) Can you suggest a better method of service of the dabbawalla's?
