Direction: Read the following Passage and Answer the Questions.

As we hold one factor fixed and keep increasing the other, the factor proportions change. Initially, as we increase the amount of the variable input, the factor proportions become more and more suitable for the production and marginal product increases. But after a certain level of employment, the production process becomes too crowded with the variable input.

Q4(a): Demonstrate. how do factor proportions change as one factor is held fixed and the other is increased in the production process? What happens to the production process when the level of employment for the variable input goes beyond a certain point?

Q4(b): Explain how does the change in factor proportions impact the marginal product of the variable input in the production process?
