

Framework of Digital Marketing in India by Interpretive Structural Modeling (ISM) and MICMAC Analysis

Dr. Gautam Srivastava, Associate Professor, IILM University, Greater Noida

ABSTRACT

Digital Marketing is playing a very crucial role in the digitalization of the country. Digital Marketing is a marketing technique that involves the usage of digital mediums such as the internet and wireless for creating awareness, consideration, purchase and loyalty for a brand, product or service. In India, especially in urban areas, people do not want to go to market physically to purchase the products. They just want the products at their home with just one click on their laptop, desktop or mobile phone. Digital marketing has changed the buying behaviour pattern of consumers which is why most companies prefer to sell their products through e-commerce websites. This research paper is based on the important factors of digital marketing and the hierarchy order of the factors. In this research paper, first of all, the important factors of digital marketing in India are identified. After that, the relationship among those factors in the form of drivers and dependence is determined. Interpretive Structural Modeling (ISM) is used to determine the hierarchy order of the factors. Structure Self Interaction Matrix (SSIM) is developed to do pairwise comparison of the important factors of digital marketing in India. After SSIM the reachability matrix is developed and the transitivity of the matrix is checked after which the matrix model is obtained. Further, the partition of the factor is done and the Interpretive Structural modeling is derived. MICMAC analysis is done to classify the identified factors into autonomous, linkage, dependence and driver factors.

Keywords: Digital Marketing, Interpretive Structural Modeling, MICMAC analysis, Structure Self Interaction Matrix, Transitivity.

Introduction

Digital Marketing has emerged as a tool so that potential consumers can be reached to beat the competition in the market (P. Kannan, 2017). In today's era, digital marketing is flooded with ever-growing scenario which has a lot of potential. Business enterprises are now using the platform of digital marketing to showcase them and it has become a trendsetter and emerged as a tool for reaching the consumers and measuring their response which in total is called Digital Marketing (Lamberton & Stephen, 2017). Digital Marketing was used in the

1990s for the very first time. In the period between the years 2000 to 2010, it has speeded up and as the users of the mobile and internet have increased, the digital marketing platform has grasped the market and online marketing started up as a medium to capture the consumers (Brosnan, 2012). The people of today's technological period want to utilize this opportunity and encash its every penny. The present arena is tech savvy and the use of the internet, smartphones, tablets etc. is too much. As per the data of the year 2017 around 340 million people use smartphones in India which is higher than the United States where the number of smartphone users is 244 million. India is emerging as a very high potential market for digital marketing as the population is approximately 128 million of which more than 65% comprises people below the age of 35 years who are more inclined towards digitalization. Digital marketing can be explained as a platform where people get a chance to discover a very large segment of products on a single window. There are various advantages of digital marketing over the traditional marketing pattern. The main advantage of digital marketing is that it helps companies in increasing their reach and reduce costs (Watson et al. 2002 and Sheth & Sharma 2005). Various other advantages are:

- Through digital marketing a large segment of the market can be tapped in just one click.
- Digital marketing is very cost-efficient over the traditional market.
- The customer's trust can be easily gained and retained by providing satisfactory results.
- The customers have a wide range of products as compared to the traditional market where the customers have limited access to products.
- The seller also has the benefit that he can target the customers and can provide services accordingly.

These all are the benefits which have led to a boom in digital marketing in India and allow a pleasant marketing atmosphere. This has provided a large product range and Hassle services for the various needs of the consumers. Right from reading a newspaper to being active on the social platform digital marketing has set up an all-new trend (Ghotbifar, 2017). The role of digital marketing is not only confined to providing an online portal for purchasing products but it is far above this. The e-commerce industry is providing earning opportunities and employment too. There are various options available for customers to select the best product and receive the true value for the money as there is a comparison option when talking about digital marketing. The cost incurred on the forum of digital marketing is less than 1/4th of the cost incurred in the traditional market. Apart from the numerous advantages of digital marketing it also helps to capture a lot of market segments and is getting better day by

day. For example, the online shopping portal Amazon was introduced for selling a range of fashion items, accessories etc. but as time has passed it has introduced its online portal for groceries and now it has entered into the payments of mobile bills, electricity bills etc. We can say that digital marketing is the need of the hour of the people of India but at the same time, there is the rural Indian society which is far away from this type of online marketing portals. Digital Marketing is the part of digital economy. India is moving very fast towards a digital economy. Internet services are playing a crucial role in the digitalization of the economy. This paper covers the wide coverage of the digital marketing platform by using various models.

India is the second largest country in the world when the population is talked about and there are high potentials in the market as there are ever-growing demand for products and services in the market. To fulfil the needs of the people there are markets which were initially the traditional market but the change in technology has shifted the market trend towards digitalization.

Literature Review

1) Need for Digital Marketing: The changing technology has made the customers the co-producers which helps in increasing the value of the customers equal to the producers (Pralhad and Ramaswamy, 2004). Different researchers have researched different things about digital marketing. Due to globalization, people are more dependent upon technological advancement and this is the marketing case also. Digital marketing helps in expanding the reach of marketers to a large extent and gain a place in the modernization era (P. Khannan, 2017). All the reviews show that the platform of digital marketing helps in reducing the transaction cost incurred in the whole process right from the manufacturing till the product reaches the customer's hands. This helps the consumers to get good stuff by paying fewer amounts as compared to the traditional market (Cait Lamberton, 2015). The users of Digital technology are the people who are young and therefore the use of Digital Marketing is increasing up (Truong & Simmons, 2014). Digital Marketing has taken up every segment of the market right from smart products to the use of artificial intelligence which is very important for the growth of the nation. Digital Marketing uses digital technology which helps in identifying the needs of the customers as well as fulfilling the demand of the customers which is needed to be fulfilled (Yadav & Pavlou, 2014).

2) Comparison of Cost on Digital Marketing and Traditional Marketing:

Source: www.digitalvidya.com (2015)

Figure: 1

The above figure indicates that the cost incurred on traditional marketing is much higher as compared to digital marketing. Among different tools of digital marketing, the maximum cost incurred on search engine marketing is \$3.4 per thousand viewers whereas the minimum cost incurred on e-mail marketing is \$1.2 per thousand viewers. Among traditional marketing

tools, the maximum cost incurred on direct mail is \$400 per thousand viewers whereas the minimum cost on TV is \$24 per thousand viewers.

3) Digital Marketing in India: Digital marketing is not a very old concept. Digital marketing was first established in the year 1990 but at that time it was only used for getting information. It was the year 1994 when the first e-commerce portal was introduced for purchasing the product online i.e. on the web portal. The search engine named “YAHOO” was introduced which provided a new platform for digital marketing in a full-fledged way (Katherine Taken Smith, 2011). Within a year it was able to achieve a very high popularity in terms of its users and it has received 1 million likes on the portal. This was the trendsetter in the path of digital marketing. In the year 1995, the Internet was first time opened up to the public and it was also introduced in India in the same year. But the actual scene of setting up the e-commerce market was the year 1998 in which GOOGLE was launched and we all know that it is the top-ranking search engine when talking about digital marketing (Nick Hajli, 2013). There are various online portals available in India for digital marketing which provide us with a large platform for purchasing items like Flipkart, amazon etc..

As talking about India which is the second largest populated country in the world 35% of people opt for digital marketing which is estimated to reach a mark of 55 % by the year 2025 (Shubham Sharma, 2016). This shows that there are a lot of untapped market segments in India and this will automatically provide a very large market for digital Marketing. There are various online portals which were introduced in India and thousands of people are earning their livelihood through this. Flipkart was founded in India in October 2007 by the Alumni of the Indian Institute of Technology, Delhi and ex-employees of Amazon Sachin Bansal and Binny Bansal. Home shop 18 launched in India on 9th April, 2008 which provided 24-hour online availability of products. Shopclues was founded in July 2011 (M.Shirisha, 2018). After this, there was a flood of e-commerce companies in India which is still at its boom in the market. The online portal provides everything to the customers but with a lot of advantages too.

- a. Platforms of digital marketing: There are several ways in which companies can use the Internet for marketing. Some ways of digital marketing are:
 - a)Affiliate Marketing: In this type of marketing structure the digital marketing company hires an outside company for promoting and marketing the products digitally. These channels help the company to provide a channel medium for the marketing of the product.

b)Video Marketing: As the name suggests, in this the company prepare a short video be 4-5 minutes for the promotion and selling of the product online. This helps customers to identify the benefits and specifications of the products.

c)Blogging: It is used for posting information on the World Wide Web for spreading the information of the products and this helps the customers to get details regarding the product.

d)Article Marketing: In this type of marketing the company prepares an article regarding the promotion and marketing of the product.

e)Email Marketing: The most popular type of digital marketing is email marketing in which the advertisements are posted through email to the personal mail address of the customers. The marketers provide a personalized offer to the customers.

5) Market size and growth of Digital Marketing in India: The growth and market size of digital marketing has grown tremendously in past years which has led to a high volume turnover in the past few years. Now in India especially in Urban India people prefer to purchase products through e-commerce websites. Indian consumers are very rapidly transforming from traditional marketing to digital marketing. The price of the products on the e-commerce website is much cheaper as compared to retail outlets. In the year 2009, the total volume of the e-commerce market in India was \$3.9 billion approximately. By the year 2013, it had shown a very high volume increase in the net worth of the digital market which rose to \$12.6 billion. In the same year, the retail online segment was worth US\$2.3 billion. The major part of digital marketing was contributed through the travel industry which was nearly 78% (Santanu Kumar Das, 2016).

In 2016, 100 million Indian consumers purchased their products online. Globally the growth rate of digital marketing is 8-10%. According to a study conducted by the Indian Institute of E-commerce, the online market in India will cross the revenue of \$100 billion by 2021. As per the research done by Forrester, the Indian e-commerce market is growing the fastest in the whole Asia Pacific Region. Between 2012–17 the growth was recorded at a rate of 57% (Semila Fernandes, 2015). According to the research conducted by Avendus Capital, the Indian e-commerce market reached \$24 billion in 2017.

The Urban vs. Rural Digital Users in India

Many researches have shown that there is a huge gap between urban and rural internet users of digital marketing in India. There are many reasons which is an obstacle in this process. A few of them are:

1. Illiteracy among the rural people.
2. Internet connectivity issues.

3. Ignorance about the technological advancement of the rural people.

However, there are several ways through which we can somehow fill the gap between the urban and rural users of the internet and digital marketing. These are:

1. Reaching the customers through mobile internet: Rural India can be targeted by tapping the untapped market segment. People nowadays use mobile phones frequently. Digital advertisement could be one of the prime sources to spread awareness of digital marketing in rural India.

2. Spreading literacy: Many people do not know how to use mobile phones and the internet. So to encourage digital marketing people should be made to study and learn things. This may be done with the help of local NGOs, the local schools and the Gram Panchayats and Zilla Parishad who have the responsibility of educating people which is beneficial for the people in every sense.

3. Spreading awareness through e-mail marketing: E-mail marketing is a personalised approach through which the target customers are approached in a tailor-made way so that the actual needs of the people can be identified and fulfilled. The seller can present a customized product in front of the customer.

4. Use of social media for providing a personal approach: Social media is of great use today. A large untapped segment of rural India can be approached through the use of social media. It is not only cheap but a large target audience can be reached through it in a short period. This is a blooming approach and is helping the marketers to make promotion of the product.

Scope and Opportunity of Digital Marketing in India

- Digital marketing is very flexible and it could be moulded in any way the marketer or the customers wish. This helps speed up the promotion and marketing of the product and each customer can be dealt with accordingly.
- Digital marketing has set up a new trend in the market. Now, people are more tilted towards searching the products online through online portals and search engines like Google etc. to satisfy their requirements by only those products which they want.
- Digital marketing is the easiest and the fastest medium of reaching people which is the main feature of the expansion of digital marketing in India.
- Digital marketing has one more importance for its expansion is that it is eco-friendly as it has cut short the use of paper which helps the environment to stay fit. This helps to fulfil the requirement of being an able and capable citizen.

- Apart from being the easiest and fastest it is the most influential medium of reaching out to people. Blogs and Twitter are changing the thinking of the people and they are more inclined towards using online portals.
- These have led to the widening of the scope of digital marketing in India. This has also helped in reaching out the people in remote areas and the government has launched various applications for making India a growing sector in the digital marketing segment.

Research Gap

The research gap which is identified from the literature review is as follows:

1. The existing literature is not able to explain the complex relationship between the important factors of digital marketing in India.
2. Lack of framework of digital marketing in India.

Figure: 2

Table 1. Drivers of Digital Marketing in India

Sl. No.	Drivers	Resource
1	Channels	K.R. Mahalaxmi (2016)
2	Technology	Katherine Taken Smith
3	Content	Michal Augustini (2014)
4	Changing	Gurneet Kaur (2017)
5	Awareness	Sonia Dara (2016)
6	Reliability	Andrew Stephen (2015)
7	Locations	Amita Chourasiya (2017)
8	Quality	Deniss Sceulovs (2017)
9	Retention	Amruta Vijay Pawar
10	Visibility	Shubham Sharma (2016)
11	Timing	Holly Paquette (2013)
12	Branding	Gouri Patil (2014)
13	Devices	Veena Tripathi (2016)
14	Communicati	Barbie Clarke (2012)
15	Social Media	Cait Lamberton (2015)
16	Experience	Sally Dunlop (2016)

The various steps of Interpretive Structural Model are as follows:

Step 1: Determine the factors of digital marketing.

Step 2: A contextual relationship is developed among the pair of drivers determined in step1.

Step 3: Structural self-interaction matrix is developed among the pair of drivers.

Step 4: A Reachability matrix is developed with the help of structural self-interaction matrix (SSIM) and checked matrix for transitivity. The transitivity rules states that if element 'X' related is to element 'Y' and element 'Y' is related to element 'Z' then it means ultimately element 'X' is related to element 'Z'.

Factors affecting digital marketing

The identified factors of digital marketing from literature review are as follows:

Target market, Channels, Technology, Content, Social Media, Budget, Changing Trends, Consumers, Awareness, Retention, Consideration, Advertising, Branding, SEO, Quality, Experience, Visibility, Communication, Reliability, Locations, Timing, Devices, Interests, Demographics, Integration, Functionality,

Structural Self Interaction Matrix (SSIM)

The help of expert from industry and academic is taken to identify the relationship between the factors. On the basis of expert opinion the contextual relationship is developed between the determined factors. Keeping contextual relationship in mind the relationship between the factors i and j is determined. The following symbols are used to determine the relationship between the identified factors.

- (a) V, when factor i will influence factor j.
- (b) A, when factor j will influence factor i.
- (c) X, for both direction relationships.
- (d) O, if no relationship between the factors.

Table 2. Structural Self Interaction Matrix (SSIM)

Sl.No.	Factors	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
1	Channels	V	X	A	O	A	O	A	O	O	O	O	A	O	O	O	X
2	Technology	A	A	A	A	A	O	A	O	A	O	O	A	O	O	X	
3	Content	V	A	X	O	A	O	A	A	O	O	V	X	X	X

13	Devices	O	A	A	X												
14	Communication	V	X	X													
15	Social Media	O	X														
16	Experience	X															

Reachability Matrix

After Structural Self Interaction Matrix (SSIM), the reachability matrix is developed. The SSIM model is converted into reachability matrix by substituting the four symbols V, A, X and O by 0 and 1. The replacement of four symbols by 0 and 1 are as follows.

V 1

A 0

X 1

O 0

Table 3. Initial Reachability Matrix

Reachability Matrix after Transitivity Check

Transitivity check is done from initial reachability matrix. As per transitivity rule

if factor X is related to factor Y and factor Y is related to factor Z than it means

factor X is related to factor Z.

Table 4. Reachability Matrix after Transitivity Check

Sl.No.	Factors	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	Drivers	Rank

Partition Level

The final reachability matrix obtained in Table 4 is partitioned into different levels. After the first iteration the variables are classified into level I. The procedure of partitioning is repeated till level VIII is determined.

Table 5. Level Partitioning (Iteration I)

Iteration I				
Factors	Reachability Set	Antecedent Set	Intersection Set	Level
1	1,3,4,5,6,9,10,12,13,14,15,16,	1,2,3,4,5,9,12,13,14,15	1,3,4,5,9,12,13,14,15	I

MICMAC Analysis

MICMAC analysis (Matrice d' Impacts Croises Multiplication Applique an Classment) is abbreviated as MICMAC. The main objective of MICMAC analysis is to analyse the driving and dependence power of the factors. On the basis of driving and dependence power the factors of digital marketing in India are classified into four parts: autonomous, linkage, driving and dependence factors.

Framework of Digital Marketing by MICMAC Analysis

Figure: 4

Conclusion

1. This study mainly provides a systematic approach to structure the digital marketing model in Indian Market. The ISM model shows the hierarchy of the factors of digital marketing for the Indian market. This model helps the digital marketer their a better decision-making process. The digital marketer can be able to determine which factor of digital marketing is most important and which is least important.
2. The ISM model yields the hierarchy in which digital marketers should focus on the enablers of digital marketing.
3. Four types of factors have been identified from the MICMAC analysis. Among them, two are autonomous factors, three dependence factors, eight linkage factors and three driving factors.
4. Location and Timing are the autonomous factors. These factors are neither good drivers nor dependence on power.
5. The dependent factors are quality, visibility and experience. These factors have weak driving power but strong dependence factors.

6. The linkage factors are channels, content, changing trends, social media, retention, branding, devices and communication. These factors are strong driving power as well as strong dependence factors. These factors are unstable because any changes in one factor will have an impact on the others.

7. Independence factors are technology, awareness and reliability. These factors are very strong driving power.

Recommendations

The earlier researches were limited only to the narrow perspective of digital marketing. They did not cover the broad aspects of digital marketing. As we know traditional marketing is replaced by digital marketing. Past research has not provided us with any specific model which explains the complex relation between digital marketing factors. This model shows the complex relationship of the factors in a clear way which helps the person in his decision-making process. The companies should consider these recommendations obtained by the digital marketing framework to increase their revenues and achieve their objectives.

Limitations

Every research has some limitations. This research study also has some limitations. This research study is based on urban India. This research does not collect primary data from rural India.

Future Scope of the Study

Eradication of the limitation of this research will be the future scope of this research. This research specifically focuses on the digitalization of urban India. Developing the framework for rural India will be the future scope of this study.
